We will be operating all bands and modes including satellite and 6

meters. There will be four stations. The first will be dedicated to CW, the second to SSB and the third to satellite, EME, 6 meters and VHF/UHF. The fourth station will be used for digital (FSK) modes. Whenever the digital station is idle it will be in packet mode on 20-meters. We will be using amplifiers for all bands and yagi beams for 40m and up. We will use the normal DX frequencies, adjusting if other DXpeditions are QRV at the same time.
One of the team members has a scientific request. There is an interest in studying the habits of the Greenland Shark (scientific name Somniosus Microcepalus.) Apparently there has been some evidence of wounds inflicted on seals around Sable Island. The normal habitant of the Greenland Shark is believed to be in the high Arctic, although not a lot is known about this creature. If any operators know of sitings of this shark, be it by themselves or even stories or folklore, we would appreciate it if you mention it if you work us.
Finally, any donations in support of this DXpedition would be greatly appreciated as the team is bearing most of the expense of this operation. The QSL route for HF QSOs is: Wayne King, VE1CBK, 63 Brook St., Lake Fletcher, Nova Scotia, Canada B2T 1A5. The QSL route for satellite, EME, 6 meters and VHF/UHF QSOs is: Don Roland, VE1AOE, PO Box 1257, Turo, Nova Scotia, Canada B2N 6N2

DX CONVENTION. The West Texas DX Association's will hold their 5th Annual W5 DX Bash on October 14th and 15th. The location will be on Bryan Edwards, K5KFT's ranch on Lake Buchanan (northwest of Austin). This is an open invitation to all DXers, Contesters, True Believers, QRPers, DX Cluster Users, Antenna Nuts, Big Guns and Little Pistols to come and join this FUN packed weekend. Registration is $20.00 per person which includes cost of continental breakfest for both days, lunch on Saturday, free coffee, free soft drinks, and free snacks for both days. The DX Dinner Saturday nite is dutch treat. Scheduled events are planned for both days. For more information or to register, contact Bryan Edwards (W5KFT) at 806-745-3692 (office) or 806-799-5783 (home).

EG, ALHUCEMAS ISLAND. The operator EA3CUU, EA5AD, EA7JB, EA7KW and EA7PN will be active as EG9A, which is located in the Moroccan Coast Islets (IOTA AF-069) on October 6, 7 and 8th. QSL via EA4URE, Box 220, 28080 Madrid, Spain. This expedition is organized by Diego Trujillo, EA7MK.

FG, GUADELOUPE. Gerard, F6FGZ will be active as FG/F6FGZ from October 2-17th from Les Saintes Islands (IOTA NA-114). He will be active mainly on CW on 160-30 meters. QSL ONLY via BUREAU.

EP, IRAN (UPDATE). On September 20th (1995) Iran will conduct its first Amateur Radio License exams in 32 years. It will be for what is comparable for a novice class license. 91 applications are pending. The progress continues to bring the EP hams back on the air.

FR5HG/T-G-J, (Clarification). The following was provided by Herik, FR5DX,: To clarify the confused information about FR5HG/T-G-J etc..., published in many different bulletins, I would like to let you know that Michel has

just returned to Reunion from a vacation trip in 5R8-land without any radio equipment. So, all the QSOs made under his call in August or early September are pirate activity.....73 de Herik, FR5DX.

MALYJ VYSOTSKIJ/RAVANSAARI ISLAND. After a three and a half year long hiatus, Malyj Vysotskij (ex 4J1-) will be reactivated at the end of the month. The 1995 M-V Island DXpedition will commence operations at noon (local) on Tuesday, September 21st, and run through Monday morning, September 25th. This will be the first operation to use the newly allocated callsign of R1MVI as well as a special call, OH2BU/MVI, both calls reflecting the uniqueness of this DXCC country located within the territory of Russia but under the control of Finland. Malyj Vysotskij, or Ravansaari, (EU-117) is located in the Bay of Vyborg northwest of St. Petersburg. This will be an all-band, all-mode operation involving nine operators from Finland and Russia running 4 complete stations, 24 hours a day with special concentration on RTTY, WARC and the low bands. The team plans an entry in the CQWW RTTY Contest during which time SSB and CW operations will be limited to avoid QRM on RTTY frequencies. Operators will be Juha/OH1KAG, Jari/OH2BU, Markus/OH3KCB, Petri/OH3MEP, Matti/OH3MMF, Harri/RA3AUU, Nick/RU3FM, Leo/RV6HY and Pavel RA3AUM. Look for this operation on the following frequencies:
CW - 1831, 3501, 7001, 10101, 14025, 18069, 21025, 24891, 28025
SSB - 1845, 3795, 7045, 14195, 14295, 18145, 21295, 24945, 28495
RTTY - 14084, 18104, 21084, 28084 kHz

Of particular interest will be the antennas for 80 and 160 meters. The team will use full-sized verticals on these bands with the 160 meter antenna being elevated with a helium balloon. Also, the team will maintain a WWW-home page to disseminate information during the DXpedition. The page is now operational at: http://www.spt.fi/~oh1kag
In addition, a direct telephone link will be installed on the island to allow users to get last minute and on-line information on the progress of the operation. That telephone number will be announced later on. QSL all contacts via OH2BU, Jari Jussila, Pilvijarvi, FIN-02400 Kirkkonummi, Finland.

OT5, BELGIUM. Operators ON4UN, AB4MJ (now ON9CNC) and ON6TT will be active as OT5T running as a Multi/Single entry during the CQ WW RTTY Contest (September 23-24th). The team will be active from John's, ON4UN, QTH. Equipment will include two identical stations, each consisting of a FT1000MP, PK900, P38, 2Kw amps, WF1B soft and ON4UN's antenna park. They will be test driving the FT1000MP units which will be used on the Heard Island DXpedition (Three FT1000MP and three FT900s will be use on the Heard).

OX, GREENLAND. Mako, JA1OEM, will be active as OX/JA1OEM from September 25th to October 16th. Mako Toyofuku is a well known Japanese DXpeditioner whose age is over 70 years. He plans to work lowbands and will be active on CW for 30/40/80 meters. QSL to his home QTH.

P5, NORTH KOREA. Over the last few weeks there have been many asking OPDX what is the status on the upcoming P5 DXpedition? The following update was

announced by Wayne, N7NG, on September 15th: "The planned trip to North Korea by Martti Laine, VR2BH has been postponed. This operation was scheduled for September 23-24th, 1995, but North Korean officials have been notified that it must be delayed. During the same time period, however, a delegation from North Korea will be in Beijing to see amateur radio in action. The North Korean group will engage in discussions, and if possible, they will operate BY1PK as well. If this operating occurs, schedules will be announced. If all continues to go well, as expected, Martti's trip will be re-scheduled sometime early next year.

PW2, BRAZIL. Vitor, PY2NY, states he will be using the special callsign PW2N in both upcoming CQWW CW and SSB Contest. His activity in the SSB contest will be on all bands (low power). In the CW contest he is thinking on operating as a single band entry (probably 40 meters, high power). QSL via bureau.

SPECIAL EVENT STATION. In commemoration of 100 years of Radio Communications, LCRA (Liga Colombiana de Radioaficionados-Seccional Bogota), will be on air as HK100GM (the suffix means Guglielmo Marconi). The operation will be on the air until December 31st (1995) and will be active on all bands and modes. QSL via HK3DDD, P.O. Box 25827, Bogota, Colombia.

VP9, BERMUDA. Bob, WB2YQH (Publisher of THE 59(9) DX REPORT), will be active from Smith's Parish in Bermuda, October 16-22nd as WB2YQH/VP9 on 80-10 meters, including WARC bands. The rig will be a TS-50 and G5RV from the Palmetto Hotel and Cottages. Emphasis will be on CW. QSL via homecall with SASE or SAE/IRC. This operation is courtesy of the Department of Tourism as world-wide winner of the 1995 Bermuda Contest. This is Radio Week in Bermuda which culminates with the award presentation at the Annual Banquet. Look for other /VP9 stations who may be attending the festivities.

YI, IRAQ. YI1BGD was heard on 18125 kHz around 1500z. YI1RS was heard on 14212 kHz around 1545z. YI1FC, Adel, was heard on the Brazil DX Net (weekdays 0900-1000Z 14240 kHz). Adel states to QSL to his old callsign YI1AFC.

ZD8, ASCENSION ISLAND. Jim, N6TR, will be active as ZD8Z from September 29th to October 8th. Look for him 33 kHz up from band edge on CW and 21150 kHz. He will also try to be active 160 meters. QSL via VE3HO, Garth Hamilton, PO Box 1156, Fonthill, ON L0S 1E0, Canada.

OPDX MAILING LIST. Just a reminder! The OPDX Bulletin can be received via InterNet E-Mail (not Packet mail). Send an InterNet message to:
opdx-request@nshore.org
and on the "Subject:" line put the word "subscribe". No text is needed in the body of the message but if you want to write something, it is all right (I read them all!).

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS

online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

We are all just having fun with you dave. The 1x2 call signs were not longer
issued back in '78 or '79 if I remember correctly. The 2x1 call signs were
started at that point. They have all but expired, although if you move to
hawaii, you might still be able to get one, I haven't seen the list for
the last 2 months.

But, to correctly answer your question, (no attitude injected), yes, they
were all issued already.

Please do not let our bad habits keep you from asking questions. The day
I stop asking questions, I'll be placed 6 feet under. :)

I just bought the latest version of the QRZ! CD-ROM, and am curious if it is worth the price to get either/both of the Buckmaster or Amsoft CD-ROMs?

How much duplication, other than the callbook, is there among these three products?

Source record: 238476

If you are in (or over) international waters, you use your own call with a notation of the "region" (I, II, or III) in which you are located.

If you are in the territorial waters of any other country you must comply with whatever "reciprocal" agreements are in effect.

In Antarctica, a special block of KC4 calls are administered by the Navy (used to be at least, may now be the NSF).

If you are on a US military base on foreign soil, you are bound by the SOFA (Status of Forces Agreement) between that country and the US. Not all of them allow amateur operation, even by members of the Armed Forces. These bases are usually NOT "US territory".

The usage of the CW requirement as a way to weed out non serious potential hams is useless. We occupy valuable spectrum. The only way we can justify this occupation is to prove our worth through technical development and public service. Holding on to antiquated modes as part of the exam process is does not further the Amateur Service (remember it is a service first, and hobby second). Why not make the theory portions more demanding. Maybe something about digital signal processing or spread spectrum technology? A knowledge of Morse code is a reasonable requirement (5-8 wpm), as it makes a more complete radio operator. The biggest problem we face is the loss of our spectrum. Why not center our certification on this fact, and proceed accordingly?

Jeff, KD6DHB

I am in 100% agreement with your statements above. However, I suggest
that the Morse testing be dropped and a BS degree in EE be used
instead as the effort required to be a ham. Even better than that
would be a BS in EE plus Mensa membership. It takes perseverance to
obtain a EE degree and intelligence to be a member of Mensa. If "there
is nothing they can't accomplish" I suggest the above two accomplishments
would be infinitely better for ham radio than a Morse test.

"Don't be ridiculous, you say?" Well, how about you cease being
ridiculous as a start in the right direction?

>The Buckmaster
>database includes the person's grid square (to six characters), latitude,
>longitude, area code, county, and hours past GMT.

Yes, BUT.... Apparently, the latitude and longitude and the resulting
grid square calculation are based just on zip code or something like that.
So their precision far exceeds their accuracy. For example, my true
location is 42 deg 20' 56" N (42.348889 deg N), 71 deg 23' 53" W
(71.398056 deg W), giving a grid square of FN42HI. (This based on
surveyor's maps at the town engineering office.) But Buckmaster
has me listed as 42.3835 N, 71.4286 W, grid sq FN42GJ.

So while they give 6 digits for lat/long and 6 for the grid sq, they're
really only good to about 3 digits on lat/long and 4 for the grid sq.

Those "some cases" where digital isn't better than CW have a different
definition of "better".

> However,
>modern digital methods assume that there is a constantly good signal.
>When the signal is poor, modern digital methods usually do not work.

HAHAHAHAHAHA.

You could not be more wrong.

>This is where CW plays a roll.

Oh, that's why NASA uses CW for its deep-space probes. I've always wondered
about that.

CW works under poor signal conditions because human receivers use specialized
error-correcting methods like "the cocktail party effect". You expect
something, and you fill it in yourself.

Pit weak signal CW versus digital on random letter groups and see who wins.

With thinking like this, I'm surprised that a person dosen't have to be
able to hand-crank a Model-T in order to get a drivers license. Face
it... there's only one valid reason that code is required... BECAUSE!!!!
It's simply a good-ole-boy litmus test! That's the way we did it and you
need to do it too. I've found that there are lots of people who can pound
the key but have no idea if they're even on frequency. The only thing
that saves most of them is that they buy commercial equipment.

Please excuse my diatribe... I really have nothing against those who enjoy
code. There is nothing wrong with enjoying this facet of amateur radio.
There is also nothing wrong with ATV, RTTY, SSB or any other spcialized
interest. Morse code simply should not be a litmus test. If anything
should, technical competence should be emphasized! There's a novel
thought...

Is this correct? I thought that the general rule in the US was that
it was okay to receive anything floating through the either, and that
the only restrictions were on what use could be made of the material
received.

Has something changed, or have these types of restrictions always been
in place?

Possible, but why would anybody bother? All you would end up with is a radio that is capable of transmitting simplex-only on a single 6-meter frequency with a power output of 100Mw or less.

Not the stereo subcarrier (at 19 kHz.) but the stereo program material.

>Never bought one myself, but I heard they sucked from more than one person
>David

It is non-trivial to build a good SCA receiver when the radio station
takes heavy metal rock and roll, converts it to a square wave, and then
sends it out as program material. First of all, you need a bunch of
pass band filtering centered on the SCA frequency (67 kHz. or whatever).
It's about 20 dB. down. Compared to the "program" material. Secondly,
you need a low distortion receiver. Third, you need to make sure you
don't have distortion problems in any buffer amplifer you use to
get the non-deemphasized baseband output out of the receiver
into the SCA box. Fourth, you have to make sure you have low
multipath distortion and/or a receiver with a good capture
ratio and AM suppression to make it less susceptible to multipath.
Finally, the radio station needs to have low splatter into the
SCA band. There are many things that can cause this splatter, all of
which have to be watched out for by the station's "engineer" (using the
word "engineer" loosely).

Then there is the 57 kHz. RDS problem. If the radio station uses that, you need
some really fancy filtering. Also, some stations have another SCA at
92 kHz. Of course you're not supposed to be homebrewing any of
this stuff anyway, as SCA is not a "broadcast" :-)

J. Duffy Beischel (gamma7@ix.netcom.com) wrote:
: In <1995Sep16.212855.27625@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary
: Coffman) writes:

: A machine cannot be taught to do something unless a human programs how
: to do it first. You can't "teach" a machine to do something if you do
: not know how to do it yourself.

Before you make that claim I would look at much of what is
currently being done in AI and ALife. Nueral nets can learn from a
correct set of samples(making a mapping for the transform based on a
small but representative set), GAs can find solutions for problems in
places we would not look, and expert systems and fuzzy logic can infer
complex prediction/control based on a small set of rules and continued grading
of preformance. Many of these are cases where we don't know how to do these
things ourselves, but we know what we want. These activities can be
accuratly described as machine learning, or training.

: In communications I am sure your are referring to modern digital
: methods being better than CW. In some cases this is true. However,
: modern digital methods assume that there is a constantly good signal.
: When the signal is poor, modern digital methods usually do not work.
: This is where CW plays a roll.

OOK (CW as you call it) is a digital mode. It has the same error
properties as non coherent, binary FSK, which is one of the worst digital
modes for getting through noise. By going to a coherent M-ary encoding,
with time diverstiy, coding, and error detection of discrete units of
data, communications can get through when the presence of OOK would not
even be noticed. In the worst case, straight FSK with coding can
preform better then OOK using Morse coding.

: To look at another situation, digital machines are very susceptive to
: destruction in the event of electronic warfare. How will digital
: methods work when the equipment fails? Farfetched? Look at your own
: tagline, "you make it we break it." Don't you think an enemy of a
: country looks to break that country's communication system? Maybe, but
: if ham radio is supposed to be the backup communications backbone for
: countries around the world, then isn't it advisable for amateur
: operators to possess a skill that may be needed just in case?

The military has systems designed to survive the loss of the
upper atmosphere and still communicate. Do you really think that amatuer
radio will operate, or even be in existance, when these systems are needed
or fail?
As far as natural disaster goes, digital equipment is more robust

then RF devices these days. Tubes break, PA transistors die due to over voltage (High VSWR or static), but most digital equipment is thick field protected and very forgiving.

: Amateur Radio is not just a hobby for us to use only as a chat medium.
: Radio spectrum is too valuable for that. If we are not willing to keep
: the skills necessary to maintain amateur radio as a resource for all
: countries to use if and when needed, then why keep spectrum tied up
: with this hobby?

I believe one reason is to advance the radio art. Another is to improve the skills of the operator/technician pool. These aren't exact, but they are implied by part 97. I don't see how CW operation helps either one.

73,
Shawn
KE4GHS

Burt Fisher (k1oik@ccsnet.com) wrote:
: Recently I posted some POSITIVE articles (one on the uses of good, the
: other a story full of positive humor on "Repeater Rabbit."

Well that story was awfully corny... people probably were embarrassed to admit
to having read it, much less liked it. Or, they disagreed with the message.
I don't hate good news. I suspect there will be much rejoicing the day
the FCC gets rid of the code requirement... followed by more years of
grumbling by all the old duffers that complain about no-code people being
unmotivated, boring, uncreative, CB-ers, lazy, getting something for nothing,
whatever. But everybody dies someday! :-) (Geez, no, I didn't mean to imply
that that would be good news....how morbid of you to even think I did!)

In other words, Repeater Rabbit hit the head on the nail (ouch! well
at least it beat getting his ears caught on a nail...) er, um....

So don't be so jealous of fat old white boring hams. Some of us are young
motivated creative (perhaps still fat and white) hams. And despite being
no-code techs too! It is not quite an oxymoron to be a no-code tech with
a brain.

Source record: 238403

No. That's one I haven't had. I had one I sent back because the rig kept locking up and then would loose all memory channels. A few seconds after that It would do a reset on itself.

Now my new rig works ok except for remote control use. I can be on 2 memory channels. Hit B03 to change the VHF side to memory channel 3. Hit D99 to start crossband then the frequency looks correct but the Memory channel display shows the previous channel. (ie: the one the rig was on when I turned the power on.)

Try it if you get the chance. It works fine from the mic and from the front of the rig. Only does it when controlled from an HT. Either band does this.

Thanks....

4921. user of antennal tuner (unusual)

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-18 00:00:00 UTC
From: stevie@boi.hp.com
Message-ID: <43k1nu$mj1@hpscit.sc.hp.com>
Source record: 238410

I have a swan 350 that has a broken band select switch which selects taps off a coil to impediance match the antenna to rig (I think). The rotary switch handles all the power out of the finals on its way to this network and then out the PL-259 connector. I am having a very hard time finding a replacement switch. The switch is located in a tight location, so modification is difficult. Its also not a good design and I believe that even if I fix it, I'll have the problem again someday.

Over the weekend, I had the thought of simply hard wiring the finals to the PL259 connector and purchasing a antenna tuner to do the same job. The switch and associated circuitry would no longer be used, but instead, take the output just past the coupling cap and feed it to the PL259 connector. That, in turn, would feed the antenna tuner.

A couple of questions for you technical wizzards?

1) Will this work?? Is the tuning circuits just to match the finals impediance to the antenna?

2) What about noise? Does the tuned circuits also serve as a band pass to suppress unwanted output?

3) Possible things I,m overlooking??????????????????

The rig will do 350 watts (according to the book).

From: John.Klingelhoeffer@comsat.COM
Message-ID: <9508188114.AA811414942@ccmail.cmc.comsat.com>
Source record: 238412

********** HF PROPAGATION FORECASTING SOFTWARE??? **********

I am interested in acquiring an HF propagation forecasting application to carry with me on my laptop PC. I have seen "MiniProp", which appears to be accurate, but is a text-oriented MS-DOS program. I'd like to get something that is truly a Windows oriented application and has a little better user interface. One feature that I would like to see is: for a particular station location, time, and solar flux, a map of the world showing me what countries are likely to have statistically good paths with each country being colored indicating each different amateur band.

I have seen the ad for the Collins propagation forecasting software in magazines recently, but it appears to be a plain DOS application as well. Has anyone a recommendation for an HF propagation forecasting application that they have used and liked (or disliked)? Please drop comments to: John.Klingelhoeffer@COMSAT.COM.

Thanks.

John...

4924. USN antenna farm In Cutler, ME.

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-18 00:00:00 UTC
From: broehrig@admin.AUrora.EDU
Message-ID: <Pine.3.89.9509180809.B16571-0100000@admin.aurora.edu>
Source record: 238413

The system is US Navy and the call sign is NAA. They used to be on 17.8 kHz but the last I heard they are now on around 24 kHZ. They operate FSK (RTTY) but it is synchronous and encrypted so uncopyable. Last I knew they ran about 2 Megawatts. The purpose is to xmit to subs.

There are several other similar stations like that operating below 100 kHz.

Boy, would I like to try that antenna farm out on 160 meters!
If you drive up to the gate at the antenna site, there is an aerial view if the antenna system on a large display board. The towers are just supports for a wire antenna system. You can see the pulleys and insulators easily from the fence.

Also, farther up north in Maine, is one of the LORAN stations (100 kHz). It is listed as the Caribou site, but is East of the town of Caribou, roughly west of Andover, N.B. They have 4 rather tall towers supporting a big "X" shaped wire antenna, fed at the center of the X with a single wire (in other words, a vertical with a hugh capacity hat). They run several hundred KW. The coast guard personnell are glad to give you a tour of the place.

There are a couple of sites in Maine for the over - the - horizon radar system (our version of the "Russian Woodpecker", I guess). Have not been to those sites in my travels (yet).

I am studying to get a tech plus licence and have acquired much
excellent study info (including Part 97) from "the net". One topic
of importance is the emmision types, allowed frquencies, and allowed
transmitted power for the diffferent classes. This is all covered in
Part 97 (.301 to .313), but it is not in a single easy to read table.
I guess it would be excellent study to make such a table, but I would
welcome and appreciate someone else's work. Anybodu out there have an
easy to read table with all that information?

Thanks in advance.

: >(the scale seems about right)
: You are correct. The call sign is NAA. The operating frequency is
: 24KHz. The modulation is MSK. All of this info is contained in the
: Shortwave Directory, Grove, ISBN 0-944543-00-6.

: The Jasik and Johnson Antenna Engineering Handbook, Second Edition,
: Table 24-1 published by Mc Graw Hill ISBN0-07-032291-0 gives the
: following information about these antennas:
: 1 megawatt at 17.8KHz.

: I don't know which reference is correct but you get the idea. The USN
: has been experimenting with direct satellite communications to
: submarines using high-speed bursts to a small Ku-band antenna that is
: extended to the surface similar to a periscope. The data rates
: available will likely make this the medium of choice soon. The VLF
: links will likely continue to serve subs that are deeply submerged.

Apparently they have changed frequency to the 24kHz range. There is a similar (?) station about a wavelength from here, the Jim Creek Naval Transmitting Station, which as I understand also moved from a slightly lower frequency. These things aren't exactly frequency-agile, since the antenna tuning is rather critical and done with rather large coils. I believe they can operate anywhere in about a 10kHz range, with appropriate retuning. At 1 megawatt, it makes for a rather high voltage at the base of the antenna(s). At Jim Creek, there are half a dozen "T" shaped antennas strung out in a line following the valley below the transmitting shack, and another half dozen above. Each "T" is something like 3000 feet high and 3000 feet across the top, suspended between parallel mountain ranges that are about 8000 feet apart. The transmitter is actually two half megawatt transmitters in phase. Each has a push-pull pair of tubes in the output.

Perhaps I'm wrong, but my impression is that they communicate information quite slowly--a very low baud rate. Their purpose seems to be to tell a sub that they need to put up an antenna to get more info, or similar pre-arranged signals. Just how much information can you push through a very high Q antenna system with a 20kHz center frequency??

I think that it is a VLF (10 kHz or so) transmitting station for the USN. VLF can penetrate water to some depth and the large navies of theworld use it to send messages to their submerged subs. The bandwidth is something terrible and so it takes time to send a long message. But the submerged subs can trail a long wire underwater to pick up the signals; no need to surface or to raise an antenna on a mast above the water where pesky planes, satellities and ships can see the wake.

Geologists and geophysicists also use the signals for prospecting for ore bodies since the signals penetrate the earth a great depth too. The presence of a conductive mass (ideally an ore body, but in my experience a fault, a very deep section of swamp or some other geological feature) will change the field>. When I was working in the Arctic we used Cutler and one other US VLF station for this.

Cecil,

Maybe we are both missing each others point. Amateur Radio was established for several reasons. The most important is that it is a resource for our country and any other country with an amateur program. There is no incentive for a country to establish an amateur program for the sole purpose of people using spectrum to talk about their illnesses, the weather, etc. That is a benefit of having been granted an amateur license. The amateur service, the key word is service, is two fold. First is to be a development ground for new technologies (I can foresee your CW argument here) and second, to be a backup communications system and an additional communication system in the event of an emergency. The emergency portion of the service is why it is important for all operators to still be proficient in CW. To be proficient, you need to be tested.

Regards,

Duffy - WB8NUT

Monday, September 18, 1995
Newington, Connecticut

For further information, contact:
David Newkirk, WJ1Z
dnewkirk@arrl.org

NEW ARRL HEADQUARTERS WORLD WIDE WEB SERVICE NOW ONLINE

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World Wide Web site, at the URI

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news; details on upcoming hamfests, conventions and Amateur Radio examinations; the ARRL Publications catalog; information of ARRL membership benefits and services; and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and ongoingly maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

73,

David Newkirk (WJ1Z)
ARRL Webmaster
ARRLWeb: http://www.arrl.org/

>used to use back in school. "We don't object to learning history(math,
>social studies, Spanish, etc.), we just object to testing!"

Sounds as if you consider yourself the wise old adult while everyone
who doesn't know CW is a young spoiled child. We are generally talking
about adults who want to be hams. I could have taken Spanish and gotten
a BA in EE but I didn't and got a BS in EE. My EE privileges are the
same either way. The more technical the task, the more important is
knowledge and the less important are skills. Morse testing has, so far,
pre-destined ham radio to be a blue-collar hobby, complete with a union.

>You can't check somebody's proficency in something unless you conduct a
>test.

You are missing the point. There is absolutely no need for proficiency in
Morse code unless one intends to use it. CW is an antique car that some
hams will polish as long as there is ham radio. I am one of them. I also
ride a motorcycle, but I don't believe in using the threat of force from
the federal government to require all driver's license applicants to pass
a motocycle test.

There's also very strong rumors floating around about a new TS-9xx transceiever. I heard reference about it mentioned over the air by a dealer (who was using an FT1000-MP at the time). When I asked my local dealer about it, he indicated that it was a "big secret", and wondered where I had heard about. Perhaps Kenwood would like to comment on this new radio?

As one of those right wingers...

What you'll likely see is codification of the de-facto policy of letting the ARRL run the amateur bands. The FCC is already talking about privitizing RFI complaints. Amateur radio is all but totally self policing now as it is. I doubt rather seriously that we put much of a dent in the FCC budget.

Further, I rather doubt that Congress will let it go by the wayside.

IMHO

>Jeff, KD6DHB

Not on HF (where knowledge of code is required). We've gained new bands in the last decade, and if the government follows through with an agency proposal, we'll gain even more HF spectrum.

The threat of spectrum-loss lies above 30 MHz, where no knowledge of code is necessary to operate.

This supposed connection between the possible loss of spectrum and the code exams is pure fiction.

Apologies to the origional poster, but our news software isn't very friendly when it comes to finding old articles ;-).

The question concerned a Rohn 48' tower on a hinged base. The tower weight is 400 pounds, it rests on a mound such that the top is ten feet above the ground. There is a ten foot tall beam imbedded in concrete ten feet from the base of the tower (I'm assuming the beam is directly opposite the direction the tower hinges and doesn't flex much). The owner wants to pull the tower upright using the beam as a pulley point (ten feet up, ten feet away).

A little geometry and mechanics tells me the initial force on the cable is about 1,970 lbs and will decrease as the tower is pulled vertical, assuming no wind.

As for the beam holding while this is happening, don't ask me, I haven't seen it in person, nor do I have the experience to tell if it'll hold.

I'd get the whole thing checked and OK'ed by a local Professional Engineer, just in case something happens someday.

Unfortunately, everyone is going to hurt when the budgets get cut. Yet,
the whole country is screaming that they want a balanced budget. Cutbacks
are fine as long as they are someone else's cutbacks. Don't take my
pork away from me. If it was only the right-wingers who voted, then there
must be only right-wingers in this country, true ? Because as we all know,
every single citizen in this country votes. Democracy was served at the
last election.

Passing a CW test simply shows that you are competent to memorize Morse code. Yes, but what if you can pound it out at 20 WPM someone might ask? Well, in music is it always the case that the fastest musician is the best musician? Not from a musician's standpoint. So why the enormous emphasis on speed in CW - why the emphasis on memorization of Morse code?

I admire a guys ability to operate CW well, I really do - it's a pleasure to watch and listen to. I just don't see it as being such an important attribute of an operator's knowledge or capability that it merits an entire series of elements.

4952. Non-inductive Resistors?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-19 00:00:00 UTC
From: mam@cbnews.cb.att.com
Message-ID: <DF684M.HzB@nntpa.cb.att.com>
Source record: 238291

How can I tell if resistors are non-inductive?

I wanted to make a QRP Dummy load, so I grabbed some resistors in my junk-drawer and cobbled them into 50 ohms. Then I plugged it into my MFJ-SWR analyzer, and as I swept higher in Freq, the SWR went up, too. So I assume these 'normal' looking resistors are inductive, and I should avoid them.

But in the meantime, if I stroll down to RS, what do I need to look for? If I just buy the standard red-pack of 5 resistors, will they be the right kind?

>>
>> Does it sound likely?

>Possible, but why would anybody bother? All you would end up with is a
>radio that is capable of transmitting simplex-only on a single 6-meter
>frequency with a power output of 100Mw or less.

I can think of ONE reason - given that the congress recently
forced the FCC to declare that monitoring of cordless phones was
illegal, AND some of these 49-MHz 2-way jobs happen to be on the same
frequencies as cordless phones......

While I suspect the law was intended to cover DELIBERATE
interception of cordless phones, I have a certain fear of the "PC
police" being all too willing to interpret the law any way they
please in this day of law-enforcement-excess.

So, since my wife and I are both hams and legal on 6 meters,
why not? If we want some short-range FM comm gear that is light and
easily portable, this might be an ideal choice. With the shift in
frequencies it gets us away from the evil horrible civilisation-crushing
possibility that we might accidently hear someones' telephone whining. :-)

So yeah - if someone out there has some good specifics on making
the conversions, POST IT.....

OK, which is easier: Memorize Ohm's law and know some basic computation skills (or use a calculator), or memorize all 11 questions and answers verbatim? It's possible, I suppose, to study the questions and answers by rote memorization, but it's a lot easier to learn what's going on behind them.

Honestly, do you know anyone who's literally memorized all the questions and answers for even the Novice written test?

To my knowledge there is no such animal. Miniprop actually has the best user interface of the ones I've seen. Other possibilities are Ionsound (nice data but makes Miniprop's interface look BEAUTIFUL), CAPMAN, Propman, and VOACAP (a clone of IONCAP that draws nifty maps but is quite slow and clunky). All of these are DOS-based, although most of them will run under a graphical interface like Windows or OS/2 in a DOS window. There is a listing in the current (October) CQ magazine of the various programs that are available, and a whole chapter on them in the new Shortwave Propagation Handbook (also by CQ). But what you're asking for does not yet exist. 73 - Alan Braun NS0B

JL>tanet.com>
JL>Newsgroups: rec.radio.amateur.misc
JL>Organization: Delta Internet Services, Anaheim, CA

JL>The usage of the CW requirement as a way to weed out non serious potential
JL>hams is useless.

Well, you are entitled to your opinion, however erroneous it may be!
I think that the truth is somewhere in between. The code requirement,
along with theory testing probably DOES filter out a considerable
number of numbskulls who might otherwise pollute the ham bands, but
like I said, you are entitled to your opinion.

JL>We occupy valuable spectrum. The only way we can justify
JL>this occupation is to prove our worth through technical development and
JL>public service.

But you can't actually DO that until you have a license. It sounds like
you are saying that we must provide Emergency Comms to prove that
we deserve a license instead of showing code proficiency.
That is going to be hard! Face it. Most hams do not get into the
hobby so that they can do E.C.s

JL>Holding on to antiquated modes as part of the exam process
JL>does not further the Amateur Service

Neither does the CONSTANT dail stupid moaning and criticism of
code by all of these non-ops like yourself on here!

JL>(remember it is a service first, and
JL>hobby second).

Maybe in some other country, but not according to FCC rules here.

JL>Why not make the theory portions more demanding. Maybe something
JL>about digital signal processing or spread spectrum technology?

WHy does the average ham need to know ANYTHING about these?
Almost no one uses spread spectrum. I am not even sure that it is
allowed for hams. DSP is a box that helps your rig. SO what?

JL>The biggest problem we face is the loss of our spectrum.
JL>Why not center our certification on this fact, and proceed accordingly?

JL>Jeff, KD6DHB

Jeff, are you saying that we need to make it part of the theory test to
ask prospective hams to answer questions about which portions of

the amateur spectrum are under fire from commercial interests?
What an unusual idea!

This symptom is a result of 60 cycle broadband noise. I can guarantee it is not coming from a transmitter, but rather from something on the AC power line. Prime suspects are SCR dimmers and/or loose (arcing) connections in wiring.

I would suggest you take your TV to several different locations in your house or around your neighborhood and try to localize the source of interference. If you can get a scanner that picks up the air band (108-136 MHz AM) you can use that to hunt down the buzz.

Good luck

>Paul S. George (psgeorge@infinet.com)

The problem with today's "technical test" is that you only have to memorize the answers. Memorization is not technical competence. I don't know of anyone that has memorized a CW test. At least when you pass a CW test it shows you have competence in something. Passing the other technical test shows that your competence is memorization.

So if you want to call it a litmus test, fine. At least when someone has to work for something, they are not as inclined to abuse it. In that regard, CW then serves a very important function. You have to work to pass the CW test.

Kindest Regards,

Duffy - WB8NUT

I use CW because I can talk to others without someone
interfering with our QSO. I may be lucky, but have never
been bothered while engaged in a CW contact. When you
listen to SSB traffic there seems to be someone causing
problems to the QSO'S. My CW is not the best, but I use
it and enjoy listening for a faint tone coming from somewhere
calling me. I really enjoy CW, and would not have learned it
if I had not been required too. Now I'm hooked...
Good Luck to all of you who will be learning CW.

: In article <DEqoD7.HLz@pgh.nauticom.net> jrosenw@pgh.nauticom.net
; (JOHN E. ROSENWALD) writes:
: >
: >Gary, your point would carry more weight if you compared apples to apples.
: >What does carrying a bucket of water from a stream have to do with
: >amateur radio ?

: Obviously it is an analogy comparing primitive methods against more
: modern techniques which accomplish the same function.

: >The last time I checked, no ships at sea had been saved
: >by carrying a bucket of water.

: Perhaps you are unaware of the concept called "bailing". :-)

I laughed about that after I wrote it, but once I thought about it,
I still agreed with it. Did you ever see a movie or hear a story
where this actually *did* save the boat ? I seem to recall that the
boat always went down in the end. :-)

: In all phases of life, one must in fact
: >prove a reasonable competency at a lower level before moving on to a
: >'larger' or 'higher' level.

: Is that a fact? Then I suppose you must be able to show mastery of the
: hand crank before being allowed to use an electrical self-starter
: on an automobile. In fact, the world works in just the opposite way.

Well, one can take any example to the extreme, but, yes, I do think
that one should be able to prove that they know how to add and subtract
before they should be allowed to buy a calculator. I also refused to
allow my daughter to buy a pair of velcro shoes until she showed me that
she could in fact tie shoes first.

: The highest levels of technology are usable without demonstrating
: competency with functionally identical but more primitive levels of
: technology. For example, to code this reply to you I don't have to
: work in primitive 1s and 0s, I have a keyboard encoder IC that deals
: with such low level codes for me, and it does a better, faster, and
: more accurate job of it than I could do manually. Now somewhere
: there may be someone at a primitive computer console reading the
: ASCII off of a row of front panel lamps and encoding his reply via
: toggle switches, but I don't have to know that to communicate
: with him. At his low level of technology, he has to demonstrate
: skill and speed with manual ASCII, at the higher level of technology
: from which I am working, I do not.

I do agree completely, but like the scientist said in the movie
Jurrasic Park (to paraphrase), "You're standing on the shoulders of
giants, but you have no respect for the technology that got you there"

I don't mean that you, Gary, (or anyone else for that matter) shows no
respect for technology, that is not my point at all.

My point is that before I can understand how digital communications work,
I have to know how ASCII is encoded. Before I can design and build a
tnc, I have to know how Ascii is stored. Before I can store Ascii, I
need to know .... (and so on, and so on) IMHO, if you want to stay where
you are today, then, by all means, go ahead and use the highest level
of technology to it's fullest advantage without understanding the
underlying principles first. But if you want to advance even further
than you are today, someone is going to need to know how to make it
work even better. And that person is going to know the underlying
principles, they will understand why things work the way they do, and
they will have the insight to make it work even better.

Morse may or may not teach us underlying principles, but I think that
they give me at least, a deeper understanding of radio in general.

As I have said in other postings, I do not have a problem with the
international requirement for a demonstrated ability with morse,
but I do think that maybe 20wpm pushes it a little.

(Personnal note: I have enjoyed the great debate, especially your postings
and I hope it continues. :-)

4980. 1995 CQP Programs and announcement!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-19 00:00:00 UTC
From: jholly@cup.hp.com
Message-ID: <43mp17$nrd@hpax.cup.hp.com>
Source record: 238365

Been working on antennas all summer and now your ready to battle test
you new arsenal?

Added a new computer to the shack and now your ready to try computer
logging?

Made changes to the computer system and now your ready to try the hardware
in real conditions?

Got your new DVK up and running and want a real test?

The California QSO party is just the place to have a fun filled 24 hours
trying out your new hardware, trying out computer logging, meeting new and
old friends! Mark October 7 and 8 on your calendar for a fun filled weekend.

Full rules were published here last week, but you can also get them at
ftp.maspar.com (alias for maspar.maspar.com) in pub/k2mm/cqp/rules-95.

For those wishing to try computer logging there are three very good
freeware programs availiable. They are authored by Northern California
Contest Club members. Al, AD6E has written a CQP only program that has
a nice free form input and handles all the duping chores in real time
and finally prints the summary sheet. His program comes complete with
basic source. Andy, AE6Y, has a dos and windows program that does not
only CQP, but also the November SweepStakes and WPX! Of course Andy's
program also handles the duping chores and prints the summary sheet at
a touch of a key. Here's your chance to try a program and hone your
skills for two other contests at the same time! Both are very nice
programs and have had several years of real use by a number of
satisfied users!

You can pick up the freeware programs at the maspar ftp site. Al's program
is in /pub/k2mm/cqp/pgm-ad6e/cqp94.zip, and Andy's program is in
/pub/k2mm/cqp/pgm-ae6y/cqp94dos.zip or cqp94win.zip. I understand Andy's
program can also be downloaded from compuserve in the ham forum library.

If you wan the programs, but can not download them, send a formatted disk,
or a buck to cover costs to:

Jim Hollenback
2021 Stonewood Ln.
San Jose, CA 95132

and I'll send you the programs back.

See you on the bands for CQP!

73, Jim, WA6SDM

Watts (galen@lamar.ColoState.EDU) wrote:
: The question concerned a Rohn 48' tower on a hinged base. The tower weight
: is 400 pounds, it rests on a mound such that the top is ten feet above the
: ground. There is a ten foot tall beam imbedded in concrete ten feet from
: the base of the tower (I'm assuming the beam is directly opposite the
: direction the tower hinges and doesn't flex much). The owner wants to pull
: the tower upright using the beam as a pulley point (ten feet up, ten feet
: away).

: A little geometry and mechanics tells me the initial force on the cable is
: about 1,970 lbs and will decrease as the tower is pulled vertical, assuming
: no wind.

Apologies, but I've erred (I'm somewhat rusty at this stuff...)

I have assumed no antennas, rotors, cable, etc and that the cable is attached
at the top of the tower (48 feet from the base).
This situation would give an initial lifting force of 960 lbs, decreasing
as the tower rises to vertical.

With 50 lbs. of antennas, rotors, and 5 lbs of cable on the tower, the
initial lifting force is 1,212 lbs, decreasing as the tower rises.

(I used summation of moments around the base hinge this time).

Attaching the lifting cable below the top decreases the lever arm due to the
tower and increases the lifting force.

Adding 25 lbs of antennas, etc at the top increases the initial lifting
force to 1,332 lbs.

I'd STILL have a Pro Engineer check it out...

Jump on your local repeaters and ask about any
traffic handling nets. Here in ohio we have regular
2 meter nets for traffic handlers.

After finding one, listen to the net (don't talk).
Make a note of several call signs then call them
after the net closes.

Be prepared with a SHORT written message.
The guy you call should be willing to help you enter
your message into the traffic net.

Message-ID: <1995Sep19.165538.18518@sequent.com>
Source record: 238369

I would like to add a cordless phone to our house.
Requirements are that it scramble in some way such that
conversations cannot be eaisly intercepted with scanner.
I'm guessing that this means digital or spread spectrum.
I would like good audio quallity. Having easily replaced
ni-cads would be great.

And what would be *really* nice is to have it not be affected
by 100 watts of CW or 500 watts SSB from an antenna 50 feet away.

Any hams that have found a good cordless phone such as this?

Thanks. 73, Dale N7PEX

>>DD>How many of those oldtimers who can copy CW
<large snip in consideration of bandwidth>

But wouldn't it be clever if we tested for the privileges you want?
That is, if you want to work CW and have privileges in the CW part of
the band, you are tested on CW. If you want phone privileges, then
the theory and maybe even a practical test on how to tune up a SSB rig
so you don't splatter 50 kc in every direction might be a good idea.

Aviation has done this for years. Just because I've got a commercial
airplane ticket doesn't let me fly balloon passengers for money. I've
gotta have a balloon rating on the paperwork.

For years I've tried to promote the idea of a "point" system for
amateur licenses might not be a bad idea. Pick and choose enough
exam questions for, say, 50 points and you get a novice. 100 points
and you get a tech and so on. No takers. Sigh.

Oh, well, all we can do is try.

4988. Need your input for Surplus Land Mobile Radio FAQ

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-19 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <43n25h$g8u@mrnews.mro.dec.com>
Source record: 238373
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

What the heck, let's make it official:
I'm willing to compile a FAQ, all about those surplus police and taxicab radios and converting them for ham-band use... you know, the ones you always hear on the air 'cuz somebody converted one: Motorola Mitrek, GE Master II, Phoenix, Delta, blah, blah, blah. There's dozens of these things available for cheap money, and I'm sure a lot of us would like to know which ones to look for, and which to skip over, as their performance often beats the imported synthesized rigs!

In particular, what I want to get is information on how to identify the particular models, what band they're on, crystal or synth, whether they're an easy conversion, need a fair amount of work and skill, or are impossible, and how to tell all of this by looking at them and reading the model/serial numbers. Also, it'd be good to know if a full manual with schematics and tune-up procedure is available, from either the manufacturer or a Sam's photofact type publication.

I don't really want to start a database of HOW to do the mods. That would be difficult without graphics, and would occupy megabytes! This should be fairly easy to deduce from the tune-up procedure and other details in the manual.

WHY do this?
1) I'm interested - I've passed over a lot of these at fleas, for lack of any information about what I was looking at.
2) It doesn't seem to exist anywhere else. A lot of hams have some knowledge about some radios, no one has written it all up.
3) Put these radios back to work, and save them from the scrapyards!

So there it is... all info, pointers, literature references appreciated! Send to me at: randolph@est.enet.dec.com

: The above is obviously written by a VERY intelligent protozoa!

The protozoans are the ones who can't recognize someone poking fun
at sacred cows.

I still use slide rules on occasion (more than calculators, much less
than pencil and paper or computers). But I don't try to claim that
we should require all freshmen taking math courses to learn how to
use slide rules and logarithm tables just because if all else fails,
they can still use them to perform important calculations.

Yet, that is the situation we see amateur radio today. So, don't
be surprised if noone wants to bother with it.

J. Duffy Beischel (gamma7@ix.netcom.com) wrote:

: In communications I am sure your are referring to modern digital
: methods being better than CW. In some cases this is true. However,
: modern digital methods assume that there is a constantly good signal.
: When the signal is poor, modern digital methods usually do not work.
: This is where CW plays a roll.

Nothing could be further from the truth. Indeed digital signals are able to be demodulated and printed when they cannot even be heard by ear. I refer you to the August 95 review in QST of the P38 board by Hal Corporation. I cannot quote word for word, but the reviewer stated that digital signals could be demodulated when it sounded like just noise.

: To look at another situation, digital machines are very susceptive to
: destruction in the event of electronic warfare. How will digital
: methods work when the equipment fails? Farfetched? Look at your own
: tagline, "you make it we break it." Don't you think an enemy of a
: country looks to break that country's communication system? Maybe, but
: if ham radio is supposed to be the backup communications backbone for
: countries around the world, then isn't it advisable for amateur
: operators to possess a skill that may be needed just in case?

In fact, modern digital communications are relatively immune to enemy interception and disruption. Even if this were not the case, what is it about Morse code that would make it immune from such intereference? In short - It isn't!

: Amateur Radio is not just a hobby for us to use only as a chat medium.
: Radio spectrum is too valuable for that. If we are not willing to keep
: the skills necessary to maintain amateur radio as a resource for all
: countries to use if and when needed, then why keep spectrum tied up
: with this hobby?

Maintainence of Morse code skills in order to maintain the radio frequency spectrum as a resource is laughable. Considering that our spectrum allocations about 30 MHz are under commercial pressure, it would seem that this insistence on having Morse code skills is directing our resources to an ignoble end. Considering how easy it was for the amateur to be allocated the WARC bands a number of years ago, and the way the above 30 MHz bands are being constantly nibbled at, we should be encouraging VHF operation, thus no-coders. It will be these people who will be the salvation of amateur radio - not the HF'ers.

Oh bullshit. Reserved for what? Some impending doom that will suddenly render all military and commercial AND voice or digital communications useless? Bah! I�m not sure which side of the code testing issue i�m on but this is silly. You are living in a dream world of �days gone (or soon to be gone) by�.

Face the facts. Ham radio came about to protect commercial users of the radio spectrum. Basically there were a number of people interested and active in fooling around with RF and various uses for it long before the amateur radio �service� was initiated. As commercial viability of the resource became obvious the �experimenters� needed to be regulated. Back then, in the glory days of ham radio, the �service� was seen as an asset for a number of reasons.

```
1 - New technology could be explored.
```

Joe Ham could spend a great deal more time and money chasing down �rabbit holes� in search of developing some concept that commercial ventures could ill afford to pursue. Some progress was made exploiting this approach. BUT for the most part, we are talking about �days gone by�. Don�t look now but the tables have turned. At this point the majority of hams (including some of the more vocal non-coders) are so far out of step with developing technologies they offer little if anything to improve the technical aspect of communications. (for the 5% or less of you that really ARE researching new technologies I apologize. You know who you are:)

The technical licensing requirements for this group need to be sufficient to keep them from causing problems for commercial spectrum users. Not to prove

they were capable of actually developing a specific technology. With the equipment available today and the ever increasing number of users of all types I seriously doubt that current testing adequately protects the commercial users. Ham radio risks being tossed off the map as we increasingly lose the ability as a group to insure our stations operate within the bounds of "good practice" for the current level of technology. The technical requirements of our licensing SHOULD be increasing. But we prefer to approach it as we have in "days gone by"...

2 - Putting radio/communications technology in the hands of the "general" public could provide, in the event of an emergency, a pool of trained operators capable of keeping information flowing.

The operational aspects of our testing reflected this. Some level of operational training was required or any given op could do more harm than good in an emergency situation. Is the existing testing adequate? That is another topic.

At one time CW was considered to be an essential part of this training. For all the reasons repeated here over and over. It WAS the most reliable under certain conditions. Because it is the simplest mode the most basic level of equipment was required to use it thus the pool of potential operators would be maximized. It WAS widely used and accepted by other "services". But these are "days gone by" my friend... Other services have surpassed us with more reliable modes and systems. CW skills no longer insure a "common" communications mode with existing services. Why do we cling to the requirement? Tradition I guess, it"s always good to be reminded of "days gone by"...

You can argue all day about whether we should or should not have CW as a license requirement but the REAL question is: Is the "emergency service" still viable? THAT is the crux of the issue. At this point it might be all the justification we have left for amateur radio... Oh sure, you might provide backup for a local communication system clogged by a heavy volume of traffic during some disaster. You might even run traffic on an international scale during some non-political mayhem. But that"s about it. In the event of serious difficulties the re-establishment of superior commercial systems is always one of the highest priorities. As these systems become more and more sophisticated, they will be less and less susceptible to overload or downtime. That is the GOAL for commercial communications providers. For the moment, ham radio can still be of value here, but soon this aspect too will be relegated to "days gone by"....

What"s the point? Wake up hamies. Who really cares if CW is or is not a requirement. While you all piss and moan about keeping the stupid CW requirement, you"ll find the world has passed you by and someone else (perhaps more worthy? or at least more of an asset) has moved into your precious spectrum.

Then we can all get together with our grandchildren point to the antiquated brass keys, long rendered obsolete tncs, ssb rigs, and slow scan systems and

tell them wonderful stories about ?days gone by?...

: is important for all operators to still be proficient in CW. To be
: proficient, you need to be tested.

: Regards,

: Duffy - WB8NUT

If I understand correctly, your argument here is that CW is necessary for emergency communications. I submit that in an emergency, the faster you can move emergency messages, the better.

CW testing requirements dictate copying speeds of 5, 13, and 20 WPM. I have copied in the 25-30 WPM range, and I know hams who copy 50 WPM+. On average, however, I would think that an avid CW operator would be in the 15-25 WPM range. CW message relaying is a manual process, with errors introduced if characters are mis-copied.

It took me 22.4 seconds to read the 75 words that I quoted above from your previous post aloud. This comes to about 200 WPM for AM/SSB/FM. Voice message relaying is also a manual process, with errors introduced if words are misunderstood. CW is probably more accurate than voice, since each word is spelled out, character-by-character, in CW.

An HF AMTOR system runs at 300 baud. Using 10 bits per character and 5 characters and a space for each word, AMTOR transfers messages at 300 WPM. AMTOR message relaying is usually manual. Errors during AMTOR transmission are detected and corrected.

An HF packet radio system also runs at 300 baud. It provides the same 300 WPM throughput as AMTOR, but message relaying is usually automatic.

A VHF packet radio system running at 1200 baud, and using the same data criteria as for AMTOR, transfers messages at 1200 WPM. The relaying of messages from source to destination is automatic, and errors during transmission are detected and corrected.

This data would tend to point in the direction of using a packet radio system for emergency data communication. When you consider the large influx of no-code licensees into the Amateur Radio Service, it becomes even more important *not* to rely on CW for emergency communications. You need to be able to transmit in a way that your intended recipient,

and all of the relay points in between, can understand. If a message originates from a CW station, it will usually be relayed via a SSB traffic net or a packet network. This is simply because more hams can communicate more efficiently in those modes.

A demonstrated proficiency in CW is required by the ITU for access to the MF and HF amateur bands. This proficiency requirement would be met by a 5 WPM test for all classes of amateur license with MF/HF privs.

Drew seems to miss the point of being a HAM. We experiment, modify, change, utilize old and sometimes outdated equipment for new and sometimes interesting purposes. Question Drew, have you ever built a simple dipole? Why? It is only good for one band and some designs are actually real narrow in bandwith they can be used perfectly in. The point is, who said it had to be perfect? If geting his FP (Fisher Price) to work on 6 was a goal, then he had a success. He may live a short distance from a repeater and at least can use it as a monitor on 6. I learned on a rock bound 40m qrp rig. (Maybe it was a highly modified FP?) It was simplex and it was only for CW. What a waste!

Has anyone actually got their hands on one of these beasts yet? I am on the list at the local emporium, but it seems they won't be here until mid-October.

I got the impression from GJ4ICD's page that they were already available in Europe. Anyone over there confirm this? How about elsewhere in the world?

I'd be interested in hearing any comments about this unit before I take delivery.

Memorizing (without noticing patterns in the exam) 500 questions isn't a
trivial thing. It also takes work.

> Memorization is not technical competence.

And black is not white.

> I
>don't know of anyone that has memorized a CW test.

CW test pools are not published beforehand. Duh.

> At least when you
>pass a CW test it shows you have competence in something. Passing the
>other technical test shows that your competence is memorization.

Memorization is competence of a type. Do you know the frequency band edges?
How about the FCC regs?

If the FCC really wanted to test for technical competence, there'd be a
practical exam: design a circuit, build something, don't burn yourself with
the soldering iron, etc.

>So if you want to call it a litmus test, fine. At least when someone
>has to work for something, they are not as inclined to abuse it.

So *that's* why all those NAL's go out to Amateur Extra class licensees.

> In
>that regard, CW then serves a very important function. You have to
>work to pass the CW test.

You have to work to pass the other tests, too. Just because the exams are
easy for you (in retrospect) doesn't mean they're uniformly easy for the
general population.

If you have never seen a Ramsey, you should know it "ain't no Heathkit".
This is not to disparage the Ramsey kits, but just as info....
At worst the impression one might get is of a box of parts, a schematic,
and a picture of what it oughta look like completed. Instructions are
mainly to help you with pitfalls you might not anticipate. There is no
comprehensive manual with "connect but do not solder the 2" red wire
from pin 8 of the transformer to pin 5 of TS 5, taking care to route
it away from blah blah blah....." You do need a little knowledge of
electronic construction technique for a Ramsey.

5002. SW BELL FA1010 ans. machine

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: wb9omc@constellation.ecn.purdue.edu
Message-ID: <43pptq$mmn@mozo.cc.purdue.edu>
Source record: 238237
Cross-posted to: misc.consumers,rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.misc

Sometime back I bought a Southwestern Bell FA1010 Digital Answering machine.
It is now out of warranty, but has "a problem" that I find annoying.

I am an Amateur Radio operator, and consequently have a fair amount of
radio receiving gear around. This FA1010 generates a lot of nasty
electrical noise on a multitude of radio frequencies, enough so to
seriously interfere with the radio work.

What I'd like to know is if there are any other folks out there with
this same machine that have noticed a similar problem.

I contacted the "help line" in the owners manual, and they were really
very little help. The guy said the machine "probably had a defective chip"
but said that if it is out of warranty (pretty sure it is) they don't
service them, all I can do is replace it. Like I said, not especially
helpful, as the machine *works* in all other respects.

FYI, something else that I've noticed is that after a couple months, the
internal clock (which you set for time/date stamping) will have fallen
about 1 1/2 hours behind. Whether or not this is in some way related to
the RF noise, I don't know. Again, I'll toss that out to the assembled
masses. :-)

If you have related info., please email me.

Perhaps the easiest solution is to go down to your local phone store,
and pick up an AT&T filter (Z1000B, I think). This is intended for just
your application. Cost is likely about the U$15.
Or you could make your own filter: The AT&T one is basically a
common-mode toroidal filter (both Tip and Ring wires are wound on the
same core). You could do something similar by taking a toroid or other
suitable core, and winding a handful of turns of your telephone wall
cord through it. I'd suggest this is easier and nicer looking to do
near the wall-jack end!

I can only guess why this cheapo phone is messing up your other phones:
most every phone uses a diode bridge in the front-end (polarity guard in
phone terminology). Depending upon internal construction, it's possible
this is demodulating the RF, and using the phone lines to distribute the
audio! You may experience this interfering audio on extension phones
even with the cheapo phone hung up.

Try the choke/filter idea.
I'm biased, so it may not be too helpful, but I'm going to suggest you
toss the cheapo phone. Quality of audio, and quality of construction is
everything in a phone, and I'd advocate one _top_quality_ phone over
three junkers! My $0.02.

How to recognize a quality phone: listen to it, particularly under
adverse conditions. "Feel" the phone, noting everything from keypress
"feel" to hookswitch operation, to handset heft, and quality of the
plastic housing (freedom from any blemishes, flow marks, flashing,
properly mating edges, etc). You'll see that some of the big names
makes crappy phones too (AT&T, GE, etc.). Northern Telecom seems to
make good quality phones over a range of features/prices.

Best of luck,

Questionnaire

Fellow amateurs,

I am doing an anthropological study to determine and categorize the underlying reasons we are arguing either for or against having morse code as an amateur radio licensing requirement. The argument itself is clear cut - yes or no. This is not an officially funded study, but rather part of a college class requirement that we each do personal research. I will try to make my results known after the end of this semester (Jan. '96). Please take a few minutes for answering the questions below. Thanks for participating!

What is your occupation?

What class of amateur license do you hold?

How long have you been licensed?

What is your age?

Did you have difficulty in learning morse code? (I don't remember is acceptable)

How was learning the code presented to you - as something difficult that had to be trudged through, or as something that was an opportunity, such as learning a new exotic language.

Did you learn morse code in the military?

Other hobbies or interests?

Any musical background?

Please present you the basis of your argument as to whether morse code should be kept or removed (entirely) as a licensing requirement for amateur radio. Include all supporting references to your viewpoint.

Please email this directly back to me at eaim103@email.mot.com

Thanks,

Bruce, WB4YUC

>link in the "Contacting the Expedition" section.

Is it just me, or has anyone else noticed that the on-line logs are not up to date. I never received my Email confirmation, nor did any other ham in my area that worked the expedition. I last checked "Am I in the logs?" last night (9/19).

It appears that the on-line logs have not been updated since last Thursday 9/14, at around 1400utc. Since I, and most of my friends worked them just after that time, we haven't been able to find ourselves listed.

Does anyone know if, and why, they have stopped updating the electronic on-line log, and stopped sending Emails?

mam@cbnews.cb.att.com (mark.a.mccuistion) wrote:
>How can I tell if resistors are non-inductive?

By measuring them. You do have to be careful though. If you
measure resistors with 1 inch leads, you will be measuring the
inductance of the leads as well.

>
>I wanted to make a QRP Dummy load, so I grabbed some resistors in my junk-drawer

>If I just buy the standard red-pack of 5 resistors, will they be the
>right kind?

I did test the 271-152A 100 ohm resistors. A pair of them will make
a nice 2 watt HF dummy load if you keep the leads short. Unlike
carbon composition resistors, which burn up rather easily, metal
oxide resistors will even handle a little abuse.

: cheapy walkie-talkies on 49MHz and put in a new xmit crystal and
: tweeked the receiver up to 6 meters.

: Hmmm. . . Anybody else ever do this?

: Does it sound likely?

Some months ago their was a thread about taking 49MHz cordless phones and putting them onto 6 meters or 2 meters. The view from that thread was yes it is quite do able, and depending on the design of the phone can be quite straight forward.

With kids walkie-talkies it should be just as possible, maybe easier (unlike with the cordless phones, you do have a PTT button already there). On the downside, the walkie-talkies are limited to a MAX of 100mw output (with all the range that implies) and goodies like a DTMF pad are almost out of the question.

Still, the thought of looking for my next transciever at "Toys 'R' Us" is neat and perverse enough for me to look into it....

I've spent quite a bit of time operating the DR-600TB remotely as a cross band repeater and I must say that my experience differs from those reported here. While there are occasions when I must enter the memory code (say B03) twice, it always works by the second attempt. I believe that the explanation for why it MAY take two tries is as follows. When the DR-600 has the remote enabled (func/mHz up), but not the repeater, the receiver does not alternate between UHF and VHF as it does when the repeater is enabled (D99). If the receiver is "resting" on VHF as a received signal appears on the UHF side, the first tone or so will not register correctly, and the memory channel selected may not be the one requested. At this point, however, you have the "attention" of the UHF receiver (the little triangle is on the UHF side of the display). On my DR-600, the second attempt at this point invariably gets me the frequency I want. Of course New Mexico is not too RF-rich. Where there are many transmissions arriving on the freq. you wish to change, you may have difficulty keeping the attention of the receiver you want to input the tones on. This is clearly not ideal, but for me it works.

I note that several of the posts on this topic have been critical of Alinco service. Again, my experiences differ. My DR-600 has been to Alinco twice, both times after the warranty period had expired. The first repair was for what could only be regarded as a user induced malfunction. I'd prefer not to be more specific. The second repair was less certainly operator error, but it was also not a defect in either materials or workmanship. In both cases, Alinco repaired the radio gratis, and returned it within the week.

I'm pretty happy with all (3) of my Alincos.

below 30MHz..its
>an INTERNATIONAL LAW.

Which, as I understand, comes under review from time to time. Believe it or not, laws CAN be changed when the political will becomes sufficient to do so. With the recently explosive growth of no-code tech operators... operators who, in most cases, have no desire to learn an antiquated system like Morse, I would guess that the political pressure on the US delegation will cause it to shift in favor of abolishing the code requirement.

> We, the USA cannot simply disobey it! We could however drop the
>CW requirements to 5WPM, plain and simple.

Okay, I'm game for that. That's a great start...drop the 13 and 20 WPM requirements and then we'll go from there.

> Now, about the use of these frequencies below 30MHz, currently all
forms of digital
>communications in the HF region are limited to low-speeds, so much for
those "awesome
>pioneers of technology" you seem to think are going to be unleashed if
the CW reqs
>were to be eliminated! Get real! You think that they're gonna let you
run T1 data on
>80 meters?

Maybe not...but the fact is that the Morse requirement is keeping many would-be, technologically-proficient young hams out of the hobby these days. We have grown up with computers, digipeters, etc. and just don't see the need to learn "dahs" and "dits." Seems about as useful as smoke signals.

> Like I said, 5 WPM wouldnt hurt anyone..it fills the ITU req, it opens
up the General
>Advanced and Extra ranks to those who would make good hams in the HF
regions and it
>puts CW in a proper role as filter - if you cant do 5 WPM, you arent
trying at all!

Hey, we agree on one point! BTW, check your callsign server. You will see that I'm a Tech-Plus, not a no-code Tech. I have my 5WPM. Not that

I have the slight bit of interest in Morse, but I do have a radio that I wanted to be able to use for *voice* on 10-meters. I took and passed the code test because the law (as it stands now) required me to do so.

>...or you're so mentally retarded we can't reasonably trust you to manage a 5KVA power supply in a linear!

Who's "we?" Besides, it wouldn't be YOUR linear that I'm working on, so what's your concern?

The No-Coders here in LA are upgrading like mad..what's keeping you from HF use? IT'S YOU! Now go listen to those tapes for a solid 20 minutes....and do it again tomorrow...you'll make it!

Nothing. I know the code. Which brings up a question: why is it that most of you pro-coders, especially that ancient group of operators known as "YE OLDE FAHRTZ" always make the broad assumption that if someone is in favor of eliminating the code requirement that they MUST be one of "those no-coders?" Believe it or not, there actually are licensed amateurs that HAVE learned the code and passed the test, but wish to see the code requirement dropped because we believe it to have outlived it's usefullness as a REQUIRED testing element for obtaining an amateur license with HF privileges in 1995.

>Email me at 920002@balut.admu.edu.ph

Here's how it works:

1. Go to your librarian and ask for the book.
2. If they are unable, then go to the Student Government.
3. If they are unable go to the Dean.
4. If He/She is unable write to the ARRL.

I think you will find step 1 more than enough to get you the book.
But with all the money that members funnel into the ARRL, I'm
sure they have an account for donating books to libraries.

Steve

Thomas,

I've got several comments for you.

1) Everyone EXCEPT the guy at HQ are volunteers...so they do this in support of the hobby out of their own kindess. I didn't see you gripe about the checkers not being willing to perform, but you did gripe about the availability of checkers! The problem is no-one in your area has volunteered to sign up to perform this service. That isn't a problem with ARRL....why don't YOU volunteer to be a checker?????

2) It IS true that currently, an SM can't do the checking you needed performed. This is stupid (speaking as an ex-SM myself.) That being the case, why not try and get this changed! Instead of complaining about it to the net at large, why not gripe at someone who can do something about it....send email to your director and vice-director asking them to change the program so that SM's can do the check! Better yet, give them a call on the phone and bend their ear directly!

I built my first two kits from Ramsey during the past year. I have to say that the CW-7 electronic keyer kit was a great first kit, and I finished it in about two hours. The instructions were very clear, and the enclosure/knob set that they supply with it is very nice. I can't really say how good Ramsey is in relation to other kit manufaturers, but I was impressed! The technical support was very good, and after being on hold for a little bit, they offered to call me back, long distance! So, give them a try! If you like CW, and have a set of paddles (or even if you don't), get the CW-7 keyer. I've also made the Ar-1 AIRCRAFT RECEIVER, but that is for a more experienced builder.
Good luck, and have a great time building!

73s,
Jamie AA3JZ (got my license in October '93)

: Most of the people that object to the code are those that are too lazy
: to learn it. I use to cirticize the code, but that was when I was also
: too lazy to learn it. But I finally buckled down, worked hard at
: learning it, and I passed the test. It's not the perfect mode, but it
: works the best when conditions are such that NOTHING else will work.

Why learn to learn? You have taken a statement about OOK vs analog
voice and strecthed it into the modern digital era. In so doing you have
made a false claim. If you will look at the math, OOK with morse encoding,
is tied for last place in the digital world.
So why learn new things and change the world? We have things that
worked fine for me, and you should limp along the same way. If this is your
attitude then maybe you need some correction.

Not surprizing, 420 to 430 MHz is now a Land Mobile band in areas above Line A.
There are many public safety services assigned to the 420 to 430 spectrum in Michigan.

5027. ARRL - One good reason not to be a member!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: hark@access.mountain.net
Message-ID: <43ntmv$5m0@news.mountain.net>
Source record: 238308

THE ARRL, ONE GOOD REASON NOT TO BE A MEMBER

After I passed the Tech tests, I had to wait almost fourteen weeks to receive the license before I could legally talk on the air! Now that problem appears to have been solved.

After talking on six meters for about a year, I had enough grid squares confirmed and on hand for the VUCC award. Many hams I talk with on the air tell me they don't shuffle paper! Now I am beginning to understand why I hear this comment frequently.

I checked here in the Charleston, WV area, the Capital of the state and the population center of West Virginia, for a checker who could inspect my QSL's for the award. On the weekly 2 meter net, I was given some names. I called these hams and none of them were checkers. One advised that he is a WAS checker, and another advised that he used to be but had given up the job. I wrote the ARRL office in CT, and was sent the name of two WV VUCC checkers. One lives in Sandyville, WV, a fifty minute drive one way from Charleston, and on a rural mail route with the box on top a pole along side the road. The other checker sent me lives in Grafton, WV, a number of hours by car from Charleston in the northern part of WV. I did not feel that I should have to drive that far, or to mail my cards to a rural mail box, to have them inspected when I live in a population center of over 100,000 people. ARRL advises NOT to send them to CT!.

I wrote both the two ARRL advised checkers for the VUCC forms. I talked with the Sandyville ham by phone a couple of times. Finally I called Oliver Rinehart, a long time ham, and section manger for ARRL in West Virginia. As I understand it, Ollie is the person who either appoints the checkers or has them appointed. He told me to come to his house, which I did, and he checked the 100 QSL cards and signed the form. I mailed the form and lists with a check for the appropriate fee to Bill Moore, Century Club Supervisor, at ARRL headquarters. A week or so later, an envelope arrived at my home from ARRL. I thought my VUCC certificate had arrived. When I opened the envelope, I found my application form returned, and a letter from Mr. Moore advising me that enclosed was my application returned. The reason cited was that Mr. Rinehart was not currently a VUCC

checker. Mr. Moore advised me to redo my application and contact a local checker, again giving me the Grafton, WV hams name.
Now some weeks have elapsed since I have been attempting to get the piece of paper to add to my others in a notebook, and I still have my cards and my returned application. The WAS checker here near me is not good enough to legally in ARRL rules check my 100 6 Meter cards. Olliver Rinehart, I guess the highest ranking ARRL official here in the valley, is not good enough, I am not to send the cards to headquarters in CT, but only the Sandyville or Grafton options or mail to a rural box will suffice!

I am beginning to see why I have hams tell me they don't collect paper and also those who tell me they don't belong to the ARRL.

Sincerely,

Thomas Hark KB8TAG

}>There are three types of radar units. The traditional type is stationary-
}>only. Older examples of this type of gun include Kustom MR-6, and MR-7,
}>CMI SpeedGun 1, etc.

Gee,

I thought there was only two types. Moving and Stationary. Some of those types listed above were put out of service a few years ago and replace by K-55's out here on the west coast. I rarely ever see a ghost reading on a K-55. Times that I see a ghost reading is when the defroster is running it seems to set it off right at 22mph every time, heavy fog and strong winds.

Strong winds???? Anybody know what the prevelant weather conditions were given at that location??? Stray waves being returned with current waves may give a false reading.

Information Request:

I am looking for radio receivers that are small enough to be taped to the helmets of student paraglider pilots. The radios we currently have are becoming old or broken and reliability is in question. What we have now are "Realistic" Brand "UHF Receiver" part number 20-108, they are about 5" X 3" X 1" in size, light weight. But they are apparently discontinued. These radios receive two channels, with crystals installed.

We are looking for new or replacement radios that have the same or similar qualities. It would be nice if they received more than one channel, but a lot are not important, maybe 2 to 5 or so.... The channels required are 151.925, 151.955, and 151.625 Mhz and others in that band are ok. These are assigned business band frequencies so we have little leeway of what we use. They need only be receive only. Transmit not important.

Dose anyone know where we can get these radios replaced with ones that have the same or similar capabilities or where they may be repaired or tuned up? May want to get a couple dozen of them depending on cost.

Please respond by E-mail because I have a 2 day expire on news here and might miss a posting.
Thank You. Ben de Lisle delisle@eskimo.com

Hi Scott,

May be the best suggestion is, not to get a hand held at all. You may soon find that its range and usefulness is rather limited and that you had spent better the cash on an decent s/h mobile radio. Before investing money into a twinbander you should enquire about the level of 70 cm activity in your area. A large number of folks do have 70, but never used it.

Ya know, Thomas, the field checkers are all volunteers. Because
your SM is the highest ranking ARRL official in your section does
not automatically qualify him to be a checker, or any of the
other MANY positions staffed by volunteers in the field organization.

You are complaining with vigor. Are you doing anything to become
a card checker? Or do you see it as somebody else's problem?
Perhaps you volunteer your time in other ways.

5038. << A 72 ft Radio Tower For only $20.00 >>

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: hmn@i-2000.com
Message-ID: <43nnri$q9r@i-2000.com>
Source record: 238319

Many of you may be aware of The Radio Amateurs Defense & Information Organization (R.A.D.I.O.
inc).

Over the last 5 years R.A.D.I.O. has supported more than 20 amateur radio operators in their efforts to
maintain their rights to have a radio tower; the most recent and most expensive (more than $30,000).

Over the years these battles always seem to benefit only a handle of local hams. However this last
case, NK2T vs Town of Hempstead, NY has proven to be a major win for the amateur radio community
in general. You the residents of the Town of Hempstead, the largest township in the USA, have livved
with a maximun tower height of 30 ft. But after the NK2T win, the Town of Hempstead is in the process of
rewritting the town ordinace to allow 72 ft. radio towers. It will be some time before the new ordinance will
become reality, but all indications point to this new change happening soon.

The next stage of R.A.D.I.O.'s adjenda is then to move on to Albany, New York to lobby for State
legislation.

Here is where we need your help.

This process has become very expensive and in order to help raise enough money to cover our expenses we are holding a drawing. This drawing will be help on December 18,1995.

For a $20.00 donation you will receive a chance to win your choice of Kenwoods TS 50s HF Transceiver or the TM 942A FM tri-bander. ONLY 200 tickets will be sold, so your chances of winning
are real good.

And if you would like to suppoert R.A.D.I.O. in other ways we are selling T-shirts for $13.50.
Pse specify your size; med, lg, xlg, xxlg.

Of course we appreciate any donations you can make to the cause.

address all correspondence to

R.A.D.I.O. Inc.
P.O Box 343
Williston Park, New York 11596

As always we thank you for your support. Without your help we could never have come as far as we
have.

Dear Thomas
It sounds like that the state of West Virginia could use a checker in
the Charleston area. Why don't you volunteer your services as a
checker to assist the ARRL and your fellow hams rather than complain?
The one drawback to this is that you still would have to send your
cards off to get them checked.
What is the problem with sending your cards to a rural route box? I
would imagine that you could use registered USPS mail just as you
would to send them to the ARRL or you could use a commercial service
(i.e. UPS).

: In article <43mes7$oio@ixnews3.ix.netcom.com>, gamma7@ix.netcom.com (J.
: Duffy Beischel) wrote:

: > The problem with today's "technical test" is that you only have to
: > memorize the answers.

: I agree.... The first thing that they should do is quit handing out the
: answers with the questions! Memorization does NOT equal understanding!

I agree completely also, but I think that I have a clarification to make.
Many people take the 'memorization' argument to the extreme and say things
like 'No one can remember that the answer to question N4D09 is A, etc.

This is *not* how memorization is accomplished.

Memorization is accomplished as follows:

Question N4D09
What type of interference may come from a multi-band antenna
connected to a poorly tuned transmitter?
A. Harmonic radiation

That is it, read no further. You only read the correct answer, you do
not even glance at the distractors. After reading through the question
pool one section at a time, over say, 10 nights, you can take and pass
any test because the only answers you 'recognize' are the ones you
have read. The distractors make no connection to the question. And
since you are allowed to miss a percentage, you pass.

But, and here is the point, what is harmonic radiaion ?, how does a
mis-tuned transmitter generate harmonics ?, or for some, why would a
multi-band antenna transmit them ? These are issues that one who
memorizes the test has no clue.

I have been an examiner for over 8 years, and I have seen this time
and time again. In fact, if anyone has seen other posts of mine,
this is *exactly* what my wife did. The day after she passed her
test, she could not answer basic questions that were not taken
ver-batum from the test. She studied (excuse me, read) for a total
of 2 weeks and passed a no-code tech license with no prior understanding
of electronics. In fact, as I said in another post, she does not
know the difference between a resistor color band and an earring.
She does not want to know. What she does know is that if she wants, she
can pass the test. She is currently working on general and I have no
doubt that she will get it. (yes, that means 13wpm)

The written tests can in fact be memorized, quite easily. Therefore acquiring a license becomes only a matter of spending adequate time.

Paul did say all of this in only one sentence, but I wanted to clear the air on the memorization issue, yes it is possible.

: Grafton, WV, a number of hours by car from Charleston in the
: northern part of WV. I did not feel that I should have to
: drive that far, or to mail my cards to a rural mail box, to
: have them inspected when I live in a population center of
: over 100,000 people. ARRL advises NOT to send them to CT!.

So do something about it. Become a checker yourself and help out
other hams in your area, encourage other hams to help out as well.

: I wrote both the two ARRL advised checkers for the VUCC
: forms. I talked with the Sandyville ham by phone a couple of
: times.

You can't check by phone, they have to see them.

: ,Finally I called Oliver Rinehart, a long time ham,
: and section manger for ARRL in West Virginia. As I
: understand it, Ollie is the person who either appoints the
: checkers or has them appointed.

Why, did you think that he had all of a sudden become a checker,
even though the ARRL did not include him on their list ?

: He told me to come to his
: house, which I did, and he checked the 100 QSL cards and
: signed the form.

He was wrong.

: I mailed the form and lists with a check
: for the appropriate fee to Bill Moore, Century Club
: Supervisor, at ARRL headquarters. A week or so later, an
: envelope arrived at my home from ARRL. I thought my VUCC
: certificate had arrived. When I opened the envelope, I found
: my application form returned, and a letter from Mr. Moore
: advising me that enclosed was my application returned. The
: reason cited was that Mr. Rinehart was not currently a VUCC
: checker. Mr. Moore advised me to redo my application and
: contact a local checker, again giving me the Grafton, WV
: hams name.

If you send in a form 610 to the fcc without 3 valid and current
VE's signatures, it would get retuned as well. If your driver's
license application gets submitted to the state without a valid
tester's name, it would get returned. If ...

: Now some weeks have elapsed since I have been
: attempting to get the piece of paper to add to my others in
: a notebook, and I still have my cards and my returned
: application. The WAS checker here near me is not good enough
: to legally in ARRL rules check my 100 6 Meter cards. Olliver
: Rinehart, I guess the highest ranking ARRL official here in
: the valley, is not good enough, I am not to send the cards
: to headquarters in CT, but only the Sandyville or Grafton
: options or mail to a rural box will suffice!

So let me get this straight, you did not do what the ARRL told you
to do, you did what your non-arrl friends told you to do, and now
you are upset with the ARRL because you failed to follow their
instructions, and things did not work out ?

: I am beginning to see why I have hams tell me they
: don't collect paper and also those who tell me they don't
: belong to the ARRL.

And I am beginning to see why when someone gets hit in the head
with a blender that they sue the manufacturer of the blender
instead of the person that hit them with it.

73 John

Suppose that because of lack of funding, Congress delegates
its regulation of the RF spectrum to the states. Presumably
any such act of congress would require each state to comply
with any treaties/MOUs signed by the United States regarding RF.

With each state being a separate party to WARC, etc, the ARRL would
probably rule that have 50 more DXCC countries!!!! Instead of 326
countries we will have 376 countries!! The DXers will _love_ it.
States with a strong pro-code lobby will require 30 WPM
tests. Georgia, with Gary as a formidable, articulate lobbyist for digital
communications, will require that any prospective ham
own their PC and be able to type at least 60 WPM while
simultaneously winding their own antenna coil. In MA where
Burt Fisher's voice will ring loudest, they will require any
amateur pass a personality test for TDD (tolerance deficit disorder).
(apologies to Gary....I was illustrating extremes coherency)

with a tolerance
,
:-)

5044. ARRL Fall National Exam Day (September 30, 1995) Testing Opportunities

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: Bart Jahnke <bjahnke@arrl.org>
Message-ID: <43p4kn$u7c@mgate.arrl.org>
Source record: 238325

Below is a list of the upcoming ARRL Fall National Exam Day Test Sessions that we are aware of that are scheduled for Saturday, September 30, 1995.

The following states do not appear to have a scheduled activity. If you are aware of a VE team who will be testing on that date, please let us know by Email (vec@arrl.org) or by phone to 860-594-0300 (or fax: 860-594-0259).

If you or a local VE team would like to schedule a test session (and request any materials if needed), please contact us. Our ARRL Test Session Registration/Request For Test Materials form (to be sumbitted by accredited VEs) is also attached at the end of this message.

States that do not appear to have a National Exam Day test session scheduled:

Hawaii
Idaho
Kentucky
Maine
Maryland
Minnesota
Mississippi
Nebraska
Nevada
New Hampshire
Oregon
South Carolina
Washington (State)
West Virginia

Scheduled tests:

ARRL - Test Session Registration/Request For Test Materials form (template). This template can be filled in, and then faxed, Emailed, mailed or phoned in to us.

AMERICAN RADIO RELAY LEAGUE / VEC
SESSION REGISTRATION/REQUEST FOR TEST MATERIALS

SEND TO ARRL/VEC AT YOUR EARLIEST CONVENIENCE IN ADVANCE OF THE SESSION FOR WHICH THIS FORM IS USED.

1. TEST DATE: _____ TIME (local):_____
(List all dates if the session will extend over a period of two or more adjacent dates, such as a weekend-long series of sessions at a convention.)

2. WILL ADDITIONAL SITTINGS BE HELD AT THIS SESSION? YES NO

3. WILL WALK-IN CANDIDATES BE ACCEPTED? YES NO

4. SESSION SPONSOR: _____
(name of club, hamfest, convention, group of VEs, or "unsponsored")

5. ADDRESS OF TEST SITE: (Be sure to include building name and room number{s} sufficient to give candidates directions to the site.)

_____

_____

_____ _____ _____
city state ZIP

6. VE TEAM CONTACT PERSON's ADDRESS: (This person will receive inquiries and applications from candidates and non-sensitive supplies from the VEC, and does not have to be an accredited VE. Exam papers will be sent only to the VE Team Liaison, named below.)

NAME: _____ CALL SIGN (if any): _____

PHONE: Candidates will call this number for test session information
(_____) _____

ADDRESS: _____

_____ _____ _____
city state ZIP

7. VE TEAM LIAISON's MAILING ADDRESS: Same as Contact Person? YES NO
(The VE Team Liaison must be an Accredited Extra class VE if Elements 1B, 1C, 3B, 4A and/or 4B are to be administered at the session. Advanced- and General-class VEs are limited to

receiving test materials for Elements 1A, 2 and 3A, only.)

NAME: _____

CALL: _____ General Advanced Extra

PHONE: day (_____) _____
PHONE: night (_____) _____

STREET ADDRESS (not a PO Box): _____

_____ _____ _____
city state ZIP
8. HAS THE VE TEAM BEEN BULK STOCKED WITH MATERIALS? YES NO Team has exam software

9. WILL THE VE TEAM BE USING THE ARRL/VEC EXAM SOFTWARE? YES NO

10. LIST BY ELEMENT THE MATERIALS THAT WILL BE NEEDED FOR THIS SESSION:

code code code written written written written written
5 WPM 13 WPM 20 WPM Novice Tech General Advanced Extra
1A 1B* 1C* 2 3A 3B* 4A* 4B*

_____ _____ _____ _____ _____ _____ _____ _____

* These elements can be administered only by Extra class VEs (Section 97.28{a}).

Would you like to receive a second version of the elements you have requested? YES NO

If YES, please indicate for each element how many you will need: example 10/5 (10 of one version and 5 of another.)

Would you like to receive whole-punched transparent overlay-grading templates? YES NO

For your Morse code exams, which test format do you wish to receive? Fill in the blank? Multiple choice?

Could we send you the ARRL/VEC Examination Software (disk)?
If YES, Size (circle): HD/DD 3-1/2" 5-1/4"

11. WHAT EXPRESS SERVICE ENVELOPES WILL YOU NEED TO RETURN THE COMPLETED SESSION?
(We will provide you with the postage-paid air-bills {address labels} and envelopes for that service.)

US Postal Service Priority Mail AirBorne Express Other: _____
or 'Previously stocked'

12. LIST QUANTITIES OF ANY ADDITIONAL SUPPLIES YOU NEED

Session Registration/Material Request Forms _____
Test Session Reports _____

Test Confirmation Letters _____
Applications (FCC FORM 610) _____
Candidate Rosters _____
C.S.C.E.s _____
Other: _____

13. LIST YOUR PROPOSED VE TEAM:

Provide the name, call sign and license class of each person who will probably serve at this test session. This is not a final commitment to serve, but it will help the ARRL/VEC ensure that your VE Team's accreditations are in good order.

Please keep in mind if the VE Team will be administering Elements 1B, 1C, 3B, 4A and/or 4B that the VEs who will sign the applications and/or CSCEs must be Extra class VEs.

You may register for a session even if you do not yet have all the examiners' accreditations completed. The FCC requires, however, that each person signing 610 applications or CSCEs must be duly accredited by the ARRL/VEC at the time the session is conducted.

I woudn't feel right about sending this mail to this News group,but excuse me.
I need information on St.Louis & the whole state.I have to report on this
because the group I belog to is going to stay at St.Louis. We are going around
the states having conference with American students.St.Louis is one of three
sities we will visit.
Today,I accessed to Washington univ. page but culdn't get to St.Louis page.
I don't know why.
I just want to make brief explanation(about 300wds)on St.Louis and the whole
state.
Any comment would be appreciated. I'm so sorry for inconvenience as the result
of personal matter. Thank you so much.

Masashi Tajiri : E-mail s95608mt@sfc.keio.ac.jp

So what if it's an ad. It reminds me of the old Hammerlund tech tips
pages in QST. (Back when they was orange and black covers.)

[[EXAMNT9.19 : 2073 in EXAMNT9.19]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 860-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "VEC@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of September 6, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

[[EXAMNT9.19W : 2086 in EXAMNT9.19W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 860-594-0300.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "VEC@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (as of September 6, 1995, that form is not available -- send the ARRL/VEC an SASE if you would like us to supply you with the form once it becomes available).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC - HAS TERMINATED OPERATIONS

D = Great Lakes ARC VEC Inc. - STATUS UNKNOWN

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

5049. Need help getting rid of really bad noise.

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: jason goldring <jason.goldring@sheridanc.on.ca>
Message-ID: <DF7Mvn.HDt@eclipse.sheridanc.on.ca>
Source record: 238330

I recently took the plunge into mobile communications, and I purchased a used Ten-Tec 10M mobile rig, complete with a Wilson 1000 magnet mount 10/11 meter antenna. After reading about the possibility of receiving altenator and ignition noise, I took the neccessary precautions to reduce noise to a minimum, such as using a noise filter, proper grounds, and shielded power cables. When I first turned on the rig, no noise was present, but as soon as I started up the car, I got the typical ignition "popping" noise, and it is very, very strong.
I have previously tried to use these stupid resistors that you fit on the end of your spark-plug leads, as well as a bigger condensor on the coil, but it never worked then, so I doubt that it would work now. I am almost at the point of giving up, so I am looking for any suggestions that may help.

Thanks in advance..
Jason.

5050. walking talking

Hi I am new to this group.

A friend of my is thinking about buying a set of walking talking.

Mortorola Sports is the one he is thinking about. Does anyone have any suggestion?

He will use primary for hunting and camping trips. please email me the response, since I don't check on the newgroup too offen.

Thanks.

read with must interest. let us not forget that the ITU noy YE OLDE FARTZ dictates that code be required to have HF privies, not the boys in blue, not the good olds boys not the prez the salamander, oooppps, the newt and all the other goof balls.

it's an international convention we are part of and quite frankly, they don't want US amateurs to have free reign on the frequencies (maybe because we operate so nicely...RADIO POLICE, calling all RADIO POLICE) let's get on to other stuff

i think this horse has be beaten enuf...it;s not only dead, it's been ground up and turned in fast food

5053. ARRL Fall National Exam Day (September 30, 1995) Testing Opportunities

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: Bart Jahnke <bjahnke@arrl.org>
Message-ID: <43p4it$u7c@mgate.arrl.org>
Source record: 238334
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Below is a list of the upcoming ARRL Fall National Exam Day Test Sessions that we are aware of that are scheduled for Saturday, September 30, 1995.

The following states do not appear to have a scheduled activity. If you are aware of a VE team who will be testing on that date, please let us know by Email (vec@arrl.org) or by phone to 860-594-0300 (or fax: 860-594-0259).

If you or a local VE team would like to schedule a test session (and request any materials if needed), please contact us. Our ARRL Test Session Registration/Request For Test Materials form (to be sumbitted by accredited VEs) is also attached at the end of this message.

States that do not appear to have a National Exam Day test session scheduled:

Hawaii
Idaho
Kentucky
Maine
Maryland
Minnesota
Mississippi
Nebraska
Nevada
New Hampshire
Oregon
South Carolina
Washington (State)
West Virginia

Scheduled tests:

ARRL - Test Session Registration/Request For Test Materials form (template). This template can be filled in, and then faxed, Emailed, mailed or phoned in to us.

AMERICAN RADIO RELAY LEAGUE / VEC
SESSION REGISTRATION/REQUEST FOR TEST MATERIALS

SEND TO ARRL/VEC AT YOUR EARLIEST CONVENIENCE IN ADVANCE OF THE SESSION FOR WHICH THIS FORM IS USED.

1. TEST DATE: _____ TIME (local):_____
(List all dates if the session will extend over a period of two or more adjacent dates, such as a weekend-long series of sessions at a convention.)

2. WILL ADDITIONAL SITTINGS BE HELD AT THIS SESSION? YES NO

3. WILL WALK-IN CANDIDATES BE ACCEPTED? YES NO

4. SESSION SPONSOR: _____
(name of club, hamfest, convention, group of VEs, or "unsponsored")

5. ADDRESS OF TEST SITE: (Be sure to include building name and room number{s} sufficient to give candidates directions to the site.)

_____

_____

_____ _____ _____
city state ZIP

6. VE TEAM CONTACT PERSON's ADDRESS: (This person will receive inquiries and applications from candidates and non-sensitive supplies from the VEC, and does not have to be an accredited VE. Exam papers will be sent only to the VE Team Liaison, named below.)

NAME: _____ CALL SIGN (if any): _____

PHONE: Candidates will call this number for test session information
(_____) _____

ADDRESS: _____

_____ _____ _____
city state ZIP

7. VE TEAM LIAISON's MAILING ADDRESS: Same as Contact Person? YES NO
(The VE Team Liaison must be an Accredited Extra class VE if Elements 1B, 1C, 3B, 4A and/or 4B are to be administered at the session. Advanced- and General-class VEs are limited to

receiving test materials for Elements 1A, 2 and 3A, only.)

NAME: _____

CALL: _____ General Advanced Extra

PHONE: day (_____) _____
PHONE: night (_____) _____

STREET ADDRESS (not a PO Box): _____

_____ _____ _____
city state ZIP
8. HAS THE VE TEAM BEEN BULK STOCKED WITH MATERIALS? YES NO Team has exam software

9. WILL THE VE TEAM BE USING THE ARRL/VEC EXAM SOFTWARE? YES NO

10. LIST BY ELEMENT THE MATERIALS THAT WILL BE NEEDED FOR THIS SESSION:

code code code written written written written written
5 WPM 13 WPM 20 WPM Novice Tech General Advanced Extra
1A 1B* 1C* 2 3A 3B* 4A* 4B*

_____ _____ _____ _____ _____ _____ _____ _____

* These elements can be administered only by Extra class VEs (Section 97.28{a}).

Would you like to receive a second version of the elements you have requested? YES NO

If YES, please indicate for each element how many you will need: example 10/5 (10 of one version and 5 of another.)

Would you like to receive whole-punched transparent overlay-grading templates? YES NO

For your Morse code exams, which test format do you wish to receive? Fill in the blank? Multiple choice?

Could we send you the ARRL/VEC Examination Software (disk)?
If YES, Size (circle): HD/DD 3-1/2" 5-1/4"

11. WHAT EXPRESS SERVICE ENVELOPES WILL YOU NEED TO RETURN THE COMPLETED SESSION?
(We will provide you with the postage-paid air-bills {address labels} and envelopes for that service.)

US Postal Service Priority Mail AirBorne Express Other: _____
or 'Previously stocked'

12. LIST QUANTITIES OF ANY ADDITIONAL SUPPLIES YOU NEED

Session Registration/Material Request Forms _____
Test Session Reports _____

Test Confirmation Letters _____
Applications (FCC FORM 610) _____
Candidate Rosters _____
C.S.C.E.s _____
Other: _____

13. LIST YOUR PROPOSED VE TEAM:

Provide the name, call sign and license class of each person who will probably serve at this test session. This is not a final commitment to serve, but it will help the ARRL/VEC ensure that your VE Team's accreditations are in good order.

Please keep in mind if the VE Team will be administering Elements 1B, 1C, 3B, 4A and/or 4B that the VEs who will sign the applications and/or CSCEs must be Extra class VEs.

You may register for a session even if you do not yet have all the examiners' accreditations completed. The FCC requires, however, that each person signing 610 applications or CSCEs must be duly accredited by the ARRL/VEC at the time the session is conducted.

Name: _____ Call: ____ Class: Extra Advanced General

Name: _____ Call: ____ Class: Extra Advanced General

5054. source for MC3362

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-20 00:00:00 UTC
From: stevekn@aol.com
Message-ID: <43pnf6$j54@newsbf02.news.aol.com>
Source record: 238335

I'm looking for the MC3362 single chip receiver chip and the LM6321 buffer opamp.
Question: Does any one know of a source which carries this chip. If the chip is unavailable, is there an upgraded chip with a new manufactuers part
number? Hopefully they still have the chip (or similar one with the same pin
outs). Any help is appreaciated :)
please reply via E-mail.

Thanks de Steve, KD1EN

>THE ARRL, ONE GOOD REASON NOT TO BE A MEMBER

>Tale of a mixup in getting cards checked deleted.

Thomas,

I am sorry that you had to go through such a mixup. I trust that if you send your cards to one of the checkers, they can help.

However, if you look over ARRL from stem to stern and use the first thing you find wrong as a reason not to support this organization, I can assure you; you will be able to find a reason not to join. If you will only join an organization that is perfect in every way, you have set impossible conditions.

I suggest that you look over ARRL from stem to stern and determine if the good outweighs the bad. All in all, I believe that it does; that is why I work here. IMHO, the work done to represent Amateur Radio nationally, our RFI programs and a host of other important things are enough to overshadow the inevitable implementation problems. While I understand your disappointment when a good thing did not work for you, is it really a solution to withold your support from ARRL, hoping that all we do, including the thing you want us to do better, goes away all together?

I know Olie well; he is a dedicated ham trying to do a very tough job for little thanks and no pay. :-) I will bring him and Bill Moore into the loop to see what can be done to make this all a bit easier for you.

BTW -- I plan to attend the next WV ARRL State Convention (usually held at Jackson's Mill). Stop by the ARRL Booth and say hello.

73 from ARRL HQ, Ed Hare, KA1CV, ARRL Laboratory Supervisor

: >I think that's fantastic.

: Absolutely wrong. The code turns people off, period. I can think of
: several technically-knowledgeable individuals who would make great
: additions to the amateur community, but they choose not to enter our
: ranks because of the code requirements. I have worked at two radio
: stations where the CHIEF ENGINEER would have been a ham, if not for the
: code. Here is a person who has obtained a First Class license from the
: FCC. He can tune a 50Kw AM broadcast transmitter, but he cannot run a
: few hundred watts on 10-meters because he doesn't know Morse Code??!!
: Where is the logic here?

Drew is correct. Believe it or not, some people have better things to
do than to waste their precious time studying code. On a scale of
1 to 10 of really important things to do, code ranks near the bottom
(just ahead of reading OJ Simpson's book).

Eric Johnson

>ohyea...
>for Id (does anyone actually know who "Id" is? we sure say our calls
>for him a lot.... :)

"Id" is "Uncle Charley", or more formally, the FCC. We do say our calls a lot for him because he has a regulation that says we must, even when we are talking to friends who all know our name and our station call sign without being reminded of it every few minutes.

We could just say "from" in French as you coded below, as in "these transmissions originate from station KE4ZV", but that sounds wordy and unnecessarily formal when spoken in conversational English. Or we could just throw in a naked "KE4ZV" in the middle of conversation without explanation and let the other parties assume it was done for Uncle Charley's benefit.

>_ . . . _ . _ . _ . _ _ _ _ . _ _ _ _ . _ _

That takes 2.4 seconds at 20 WPM (the fastest legal speed "for Id" when used in the midst of another information coding), saying "KA1JY" takes under a second, and even saying "KA1JY for ID" happens in under 2 seconds. So either is more time efficient. I prefer the former to the latter for that reason, since the "for ID" part can safely be assumed by other parties to the conversation, even though it is abrupt and non-conversational to do so without explanatory verbage. "for Id" just smooths the conversational flow a bit following the interrupt, and isn't absolutely necessary.

We could do what a lot of the commercials do and *use* Morse "for Id" by inserting it automatically at 20 db down under speech and at a tone frequency of 2600 Hz which is easily filtered out. That satisfies Uncle Charley without interrupting the conversational flow.

But likely more effective if placed at the phone base since the cord
past the filter isn't suppressed. You may also want to put 0.001 capacitors
across the line before the choke. And you may need .001 capacitors across
the receiver element and the microphone element as well.

> I can only guess why this cheapo phone is messing up your other phones:

Yeah, that's a good theory. Electronic phones need to steal power from
telco battery, so they have that nice "demodulator" built in.

> Try the choke/filter idea.
> I'm biased, so it may not be too helpful, but I'm going to suggest you
>toss the cheapo phone. Quality of audio, and quality of construction is
>_everything_ in a phone, and I'd advocate one _top_quality_ phone over
>three junkers! My $0.02.

I agree wholeheartedly. A phone that says "Western Electric" and
"property of the Bell System" on the bottom is *much* better than

some of the junk being sold as telephones today. If the handset doesn't have enough heft to beat a bad guy to death with it and then still work so you can call 911 to come pick up the body, pitch it and get a "real" phone.

We still use a WE300 at the farm that must be over 40 years old. (The phone company keeps begging us to upgrade from rotary dial, but screw'em, they just want to hit us with another monthly charge so *they* don't have to maintain rotary equipment on their end of the line.) I must have trashed a dozen cheapy phones here before finally getting wise and scrounging a Model 500 deskset. The Bell System didn't sell phones, they leased them, and it cost them money to come out and replace a broken phone, so they made them to last. (If you must have TT, get a Model 2500. It may not be quite as rugged as the older phones, but it's still pretty strong.)

These older phones are nearly RFI immune too compared to fancy electronic phones because the non-TT ones don't have any active electronics. If you can't find one for $2 at a fleamarket, you aren't looking. Cheap, rugged, reliable, what more can you ask of a phone instrument?

In theory it should be possible to modify a cordless phone base/handset
("substiantial power boost") in order to be able to get , Ooh, maybe say 2-3
miles distance, much like a lo-wattage UHF transceiver.

skipping a lot of the theory and vy basic fundamental research, here's what
some of us young locals are trying... suggestions and advice are solicited

we've taken a cordless telephone base station and hooked it up to an external antenna
we designed to enhance the 40-55MHz range.
Still needing to do, take the present weak signal of the base and "amplify it" up
to say 10-15 watts.
Any suggestions from the radio or CB "boosters" are welcome as to types of
amps we should use

we've taken the handset and relocated it to our "mobile vehicle test station" [my car].
we've removed the antenna and replaced it with an external antenna we designed
for 45-50 MHz
the last thing left to do here is to boost the weak handset signal to @least
10 watts of output. we were thinking of locating and modifying some type of
ham or CB radio signal booster.

Can we solicit your thoughts, suggestions or pointers?
thanx much,
pgatz@tiac.net

I attended an international conference on patch antennas sponsored by the Physical Science Lab of New Mexico State University in 1984 or 1985. The proceedings from this conference may be available from the NMSU library. I donated my copy to the GTE Federal Systems Division library in Chantilly VA. The book was about two inches thick and had a red cover. Try to e-mail the librarian, Bonnie Whitland, at whitland.bonnie@gtefsd.com. Good luck. They are really neat antennas. Depending on how you feed them you can get simultaneous right and left hand circular polarization.

I would be willing to bet that you have either a defective switch at
the wall. Turn off the power at the circuit breaker and see if the
problem stops. If it does, replace the switch and restore power. If
the problem returns, try replacing the breaker on this circuit.

Heck Drew, I would have been an engineer if I did not have to learn all that engineering stuff. I mean math really turns me off. Shoot, why do you need to learn math in these days of calculators and computers. The computers can solve about any engineering calculation. I would love to enter the ranks of engineering, but I refuse to until they drop those stupid math requirements. It is just a bunch of old farts that keep insisting on newbies learning math in order to join their ranks. In this day and age, who needs math.

I know a home builder who know plenty about engineering but he refuses to learn the math like me. He is perfectly capable of being an engineer but he just hates the math. This is the second home builder that I have known that is perfectly capable and knowledgeable in engineering, but is being kept out of the profession over this stupid outdated math requirement.

I had one for awhile. After just two weekends of use it broke. The connection at the radio end of the mic came loose. Nothing that couldn't be fixed, but I was camping with only a few tools.

My advice: Don't get it.

I have had to send back some 572B's I bought in January from RF Parts. They just went bad. RF Parts says they have a new Russsian tube that is better than the Chinese ones I had. I was wondering if anyone had any experience or knowledge of how good these tubes are. They cost about $35 more than the others a set. My amp runs 4 of them so I am looking at $70 more for these.

Tnx fer any help anyone can give. Please send all replys to my email address.

GC> I agree wholeheartedly. A phone that says "Western Electric" and
GC> "property of the Bell System" on the bottom is *much* better than
GC> some of the junk being sold as telephones today. If the handset
GC> doesn't have enough heft to beat a bad guy to death with it and
GC> then still work so you can call 911 to come pick up the body,
GC> pitch it and get a "real" phone.
GC> These older phones are nearly RFI immune too compared to fancy
GC> electronic phones because the non-TT ones don't have any active
GC> electronics. If you can't find one for $2 at a fleamarket, you
GC> aren't looking. Cheap, rugged, reliable, what more can you
GC> ask of a phone instrument?

When I lived at Ft. Polk, La. I had nothing but problems trying
to operate H.F. no matter how much power I used. The neighbors that
lived right next door hated me. No matter what I did to try and
eliminate the problem it did not work. One day the wife of my neighbor
next door came over just a ranting and a raving about me coming across
her phone. I had learned allot about part 15 and part 68 of the FCC code
and had purchased three phones that complied with part 68. These were
the old rotary type and one was a touch-tone part 68. I had tested these
phones and they nearly eliminated all interference. When I offered her
the use of any of the phones and informed her that her phone was cheap
she went ballistic. She let me know that she had paid $120.00 for her
phone and it was not cheap. I told her that I had paid $5.00 for all
three of these phones and they don't receive any interference. That made
her hotter.

Later her husband came over and I gathered all of the info
I could find on part 15, 17, and 68. He was listening as I told him
about the in's and out's of manufacturing under parts 15 and 17 and for
him to check his phone and read the label on the back that states that
the device must accept all interference al-beit undesirable. Well all
was fine until I offered to let him use any one of my "ugly" $1.67
phones. He soon went ballistic as well.

The moral of the story, you go by the rules and try and run a
clean station but it doesn't matter, the U.S. Army had the final say in
this matter, they revoked my permit for operating within the rules. You
just can't win sometimes.

>in place?

Yes, things have changed. It's called ECPA (Electronic Communications
Privacy Act) and it prohibits reception of most signals not intended
for you. While making cellular eavesdropping illegal was the primary
reason for this law, there are a lot of other things that are now
illegal to listen to as well, including SCA signals whose content is
not intended for you. Of course this doesn't cover broadcasts intended
for the general public, nor for signals in the amateur service, or
certain *unencrypted* government public service transmissions, IE
general police/fire type things, which remain fair game. If they take
steps, even rudimentary, to encrypt their signal, however, you are
then prohibited from monitoring and trying to figure them out. But aside
from such limited exceptions, signals not directed at you are now
illegal to monitor.

Enforcement is, as you might expect, difficult, and spotty at best,
so many people continue to violate the law without consequences.
If they do perchance catch you, however, the penalties are severe.

ZCZC AE25
QST de W1AW
DX Bulletin 49 ARLD049
From ARRL Headquarters
Newington CT September 21, 1995
To all radio amateurs

SB DX ARL ARLD049
ARLD049 DX news

This week's bulletin was made possible with info provided by Rys, SP5EWY, Saad, KB6VIR, Frank, AH0W/OH2LVG, Tedd, KB8NW, Joe, NJ1Q, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

NORTH KOREA, P5. The September 23 and 24 DXpedition by Martti, VR2BH, has been postponed. Early 1996 has been mentioned as a possible make up date.

IRAQ, YI. YI1BGD was on 18125 kHz around 1500z, YI1RS on 14212 kHz at 1545z, and YI1FC was on the Brazil DX Net which meets weekdays from 0900 to 1000z on 14240 kHz. QSL YI1FC via his old call YI1AFC.

IRAN, EP. It has been reported that on September 20 and for the first time in over 30 years, Amateur Radio License exams were conducted. These were comparable to a novice class license. 91 applications are pending.

PAKISTAN, AP. SP5DIR, operator of AP5N and AR5N, reports that the QSL info in our July bulletin ARLD041 was incorrect. QSL AP5N and AR5N via Andrzej Makowski, PO Box 36, 00-976 Warszawa 13, Poland.

FERNANDO DE NOROHNA, PY0. Frank, AH0W/OH2LVG, reports that he and Jack, WA7LNW, will not be going to PY0 for the SAC Contest, as reported last week in ARLD048. We apologize for this error.

SABLE ISLAND, CY0. Plans have been finalized for this major DXpedition. CY0TP should be on the air from September 30 to October 10 on all bands, all modes, satellite, EME and VHF/UHF. This serious operation will feature four stations, amplifiers and Yagi antennas from 40 meters up. QSL HF contacts via VE1CBK. Satellite, EME, UHF/VHF cards should go via VE1AOE.

KUWAIT, 9K0. Prefix hunters note that Hamad, 9K2HN, will soon be signing 9K0A. Listen for him in the CQ WW SSB Contest and upcoming special events. Activity will be on 20 through 10 meters. QSL via 9K2HN by the bureau or direct.

ISRAEL, 4X/4Z. Amir, 4X6TT, has announced a joint Israel/Jordan expedition which coincides with the first anniversary of the peace treaty between the two nations. 4X7JY and 4Z7JY be on all bands, CW, SSB and RTTY, October 25 to 31. The location will be very close to Ein Evrona where the treaty was signed. A similar operation recently took place in Jordan as JY74X, operating from Mount Nebo.

BARBADOS, 8P. Sigi, DL7UUO, will be on the air as 8P9II September 23 to October 10. Though an all band operation on CW, SSB and RTTY, the low bands will be favored. QSL via DL7UUO.

GUADELOUPE, FG. Gerard, F6FGZ will sign FG/F6FGZ October 2 to 17 from Les Saintes Islands, IOTA NA-114. He prefers 160 through 30 meter CW. QSL ONLY via BUREAU.

GREENLAND, OX. Mako, JA1OEM, will sign OX/JA1OEM September 25 to October 16. He plans to work CW on 80, 40 and 30 meters. QSL via JA1OEM.

BERMUDA, VP9. Bob, WB2YQH, Publisher of THE 599 DX Report, will sign WB2YQH/VP9 from Smith's Parish October 16 to 22. He will be on 80 through 10 meters, with an emphasis on CW.

HELP OFFERING. Henning, DL6DH, offers his services as a QSL Manager. If interested, contact him via packet radio as DL6DH at DB0BID, or via the Internet to dl6dh at giessen.netsurf.de.

HELP REQUEST. Saad, KB6VIR, operated from Nigeria in 1988 and 1989 and continues in his longtime effort to attain DXCC for his Nigerian effort. Any help would be greatly appreciated. QSL cards from the following stations are still needed.

5N0ELT, 5N0SKO, 9Y4TT, A25/ZS6BRZ, C30DSA, CR3MI, CT3DL, CW8B, 3X1SG, CX2PI, CX2TG, DU1ANV, FG5DX, FM5CY, HB0/DF1JC, HC5J, HD8DZ, HD9OT, OD5WY, PJ0J, ST1JRF, TI1Y, TI2OY, TL8HW, UD6DR, UG6LQ, UI9BWE, UJ7/UZ9OWM, UR2RE, W4LZZ/V21, YS1JBL, ZD8BOB and ZD8RP.

Contact Saad via 19251 Preston Road, number 2024, Dallas TX 75252.

THIS WEEKEND ON THE RADIO. The CQ WW RTTY Contest runs from 0000Z September 23 to 2400Z September 24. The phone portion of the Scandinavian Activity Day starts at 1500Z September 23 and ends at 1500Z September 24. For more details on these two events, see page 127 in September QST.

There's a simple explanation - they've run out of them! The FCC will not reissue vacated call signs (where either the license or the holder has expired or the call sign turned in for another) until the first gate of the Vanity Call Sign Program opens (possibly in just a few days!).
-
Check out any of the call sign listings to see what I mean...

While Jeff's right about HF allocations increasing, and the VHF-and-up spectrum being the ones under pressure, there's still a connection between code tests and loss of spectrum; amateur radio's continued insistence on a code requirement in the face of the continuing rapid abandonment of Morse by other services makes us look like a nostagic old-tyme radio club. Parties trying to get ham spectrum reallocated can try to dismiss comments filed by amateurs by pointing to the code requirements as evidence hams no longer have any idea of how to make proper use of their frequencies.

Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:
http://www.oakland.edu/barc/ham-more.html

I'll offer the "loose wire or dirty joint" solution.

Could it be that a joint is now 100% and starts to kick out (i.e. emit) noise?
Kicking the house wiring (so to speak) by switching on/off those lights might
be enough to correct that joint .. .. for a while.

This certainly happens with plumbing - only this morning I found that turning
on/off one tap affected the dripping from another tap on the same supply line.

How is your pre-amp powered? Any power joints there less than 100%?
Might also be worth checking all the connections in the feed from the antenna
to the TVs - they should really (if UK practise applies over there) be soldered
to make for as good reliability as possible.

You'd better fix this problem and post a solution - you'll probably have a lot
of interested readers
;-)

I have put off for 5 years joining ARRL. The $28 to $31 always could be used
to buy or help buy some item for the shack.

But more and more I noticed that I was using the League's info and stuff.
Such as Sending e-mail for info or checking the bullitins etc.

Last week when I checked the League's new web page, I noticed some things that need
changing (maybe).
BUT before I could send a msg to the webmaster, I felt that I should become a member. Right
there was the info for membership so I faxed it before I
should forget again.
The ARRL may not be perfect, But it's way ahead of anything else and I don't believe in
going all the way back down the mountain just to try a better path that may not exist.

Suggestion: give it up. Most 49 MHz cordless phones use the same
antenna for both transmit and receive, with a set of filters for
duplexing. You can't put an amplifier between a duplexer and an
antenna; it can't amplify both ways at once, and if it amplifies
in one direction it breaks the path the other direction.

Additionally, you are asking for a lot of irate neighbors, (TVI as
well as cordless interference) and possible legal action.

I have seen in the UK a set made by Tamagawa which uses 49/72 MHz
and does about a mile with outdoor antennas. It interferes with
VHF TV (would be channel 4 in U.S.) but still would probably do a
better job than anything an average guy could put together.

>that the digital method no longer worked, the signal was still strong
>enought that CW could have been perfectly readable.

It's not the method at fault, it's your selection of poor implementations of the method that are at fault. Even plain old FSK has the same noise immunity as OOK, and with half the peak spectral power required. Transmission encoding is a snap, of course, and easily done to *any* transmitter. Decoding requires some care in design to give good performance. A lot of the boxes on the market are half-hearted attempts at best, just plain boneheaded at worst. Often they use perversions of telco modem chips, or crude PLL decoders, neither suited to the HF environment.

Even plain old RTTY can be copied down in the noise floor with a good decoder, even a good old fashioned low tech decoder such as those designed by Irv Hoff back in the 60s. Of course DSP can make the decoder easy and cheap compared to the toroids and vacuum tubes of Irv's designs. And more robust codings can really improve performance.

Don't condemn the method because you've only used poor implementations of it. Galena and spark were used with Morse too, but they don't define the ultimate capability of the encoding. KAMs and PK-232s are *not* defining technologies for machine digital, anymore than galena and spark are for manual Morse. Just because *they* suck, doesn't mean the method sucks.

When I did the first RTTY QSO on Oscar 10, I could detect the signal by ear (barely) but wouldn't have been able to read Morse in that noise (though perhaps a few exceptional people might have), but the good old HAL TU pulled the copy out just fine with 90+% accurate print. Now that's a *crude* system by today's SOTA standards, but one hell of a lot better than the PK-232 I had. New and expensive doesn't *necessarily* translate to better, though of course it can if the designers are competent.

I've been working with the Analog Devices DSP kit and have programmed a simple modem that can detect signals I *can't* hear in the noise. For plain RTTY with no error correction, it's far from a perfect system (and user hostile as all hell right now, no tuning indicator, kludgy two port interface to the pc, etc). When I get m-ary coding working, and convolutional

error correction coding, it should be less crude, and if I can figure out a way around the loose coupling to the PC, less user hostile as well. All that with a little board that cost $80 *including* development tools. The chip itself is only a few bucks.

I've also stumbled on a real find at a local surplus house, an IBM DSP soundcard designed to work with their educational software division's speech bios. It uses a TMS320C25, has shared memory and bidirectional interrupts between the host and the DSP processor, 88.2 kHz sample rate, 16 bits, etc. It even has a technical reference good enough to let you figure out how to program it yourself (with the right TMS development tools, which you can scrounge off the net). This thing holds real promise for implementing a good tightly coupled DSP decoding system. It was cheap too (don't bother to write, I got the last one that they had, nah, nah). Of course TAPR sells a better board, but it's a kit, and costs a lot more than my surplus find. The C25 should have enough horsepower for the low rate codings I'm working with.

Of course you could just buy a HAL P-38 for $399 and have a turnkey solution approaching the Shannon limit within less than 10 db, but that's no fun. Voyager got down to within 4 db of the Shannon Eb/No limit with tandem coding. We *can* do at least as well today for milli-pennies on the dollar of what that system cost. OOK is at least 9 db worse for the same error rate/speed as a good antipodal PSK, even with a decent error correcting coding, with Morse it is many more db worse because the *code* isn't a good one for the noisy channel (it was designed for quiet landlines after all, and before information theory told us what a good code should be).

As example, at the Eb/No of an EME signal where practiced operators can just, sometimes, distinguish a long Morse T or M, good digital codes are giving 100% accurate copy at 40 bps or better. At slightly better signal levels, the error rate decreases asymptotically, and much higher bps become practical. We've understood the theory of these systems for nearly 50 years, and now the hardware to implement them correctly is becoming dirt cheap thanks to modern microelectronics. Who will be the first amateur EMEers to throw away that power gobbling amplifier and replace its gain with the coding gain of a tiny scrap of silicon?

Gary

IARU MEETINGS IN NIAGARA FALLS

Late in September, a number of meetings (executive, committee and the General Meeting) of the IARU (International Amateur Radio Union) Region II are to be held in Niagara Falls, ON. Many items of regional interest are to be discussed which could shape things to come in the amateur radio field. Topics of great importance to the amateur radio community will also be under discussion at these meetings. Canada will be represented by the President of RAC, J. Farrell Hopwood VE7RD. It also happens that the Vice-President for Region II is a Canadian, Thomas B. J. Atkins VE3CDM, so we should be well represented at the various meetings.

Someone out there is sure to ask, "What countries are represented by their amateur radio societies and are included in Region II of IARU?" (this is an excellent Trivial Pursuit question), so before I get requests for the list, here it is:
Anguilla, Antigua and Barbuda, Argentina, Aruba, Bahamas, Barbados, Belize, Bermuda, Bolivia, Brazil, British Virgin Islands, Canada, Cayman Islands,

Colombia, Costa Rica, Cuba, Chile, Dominica, Ecuador, El Salvador, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Montserrat, Netherlands Antilles, Nicaragua, Panama, Paraguay, Peru, Republica Dominica, Suriname, Trinidad and Tobago, Turks and Caicos Islands, United States of America, Uruguay and Venezuela.
So now you know! There will be more reported about these meeting in future bulletins.

NEW EDITOR

With this bulletin you will find a new editor at the keyboard. As the incoming editor, I want to thank Cam VE3UXN on behalf of all the hams who read this Bulletin for his work over the last years in getting the news out every month.

I will try to reflect what is happening in the Canadian scene of Ham radio, but, I need some input from all of you at large. I can only report and use what is sent to me. You will find later in this Bulletin my E-mail address, and if you wish you can always send your news to the RAC Headquarters. Some will recognize me and the call, VE3VIA, from the propagation page in TCA. Yes, it is the same person. How I became editor of this bulletin is a very short story that I might tell on a slow news day. I was "volunteered"! I am looking forward to this task, but I need your help.

STATE OF RAC

Over the summer, the President of RAC was on a tour of Atlantic Canada (I know it was not the Maritimes because he also went to Newfoundland!). At each stop, Moncton, Halifax and St. John's, VE7RD discussed the state of amateur radio in Canada and more specifically how well RAC is doing in a new world.

Since 1992, there has been an increase of 35% in the number of licensees in Canada. Unfortunately this rapid increase has not translated in a similar increase in the membership of RAC. RAC is still expected to look after the interests of all the hams in Canada, but does not have the funds necessary to do so. Only 18% of the total Amateur operators in Canada belong to RAC.

This situation may become a very interesting one if Industry Canada "devolves" many of its responsibilities to RAC. Some excerpts of the speech given in Atlantic Canada are food for thought, not only for the present RAC members, but for ALL the ham operators in Canada.

"...Times are changing! The highly competitive global telecommunications economy is flourishing and expanding so rapidly, and it is so complex that one cannot keep up with its demands. Capital investments in the billions of dollars are creating huge markets for the Cellular Radio, Personal Communications Systems, and other wireless technologies, satellite services, and links to the information highway, all use the radio spectrum. We Amateurs currently use a large chunk of that spectrum. Our bands are extremely valuable assets in a world in which the spectrum is limited and crowded. To top it off another

challenge confronts us.

We can no longer count on Government to be our mentor. The days are gone when the officials and inspectors were amateurs themselves and took a special interest in amateur radio. While many officials are helpful, we are essentially on our own now.

Government budgets are cut, department officials and staff are forced to focus on new and increasingly complex spectrum management issues..."

If we want RAC to keep on representing all the Amateur operators in Canada, it will become essential to recruit new members and simultaneously increase the annual fees. In some countries the fees are now over $100; we are getting a bargain!

RAC's revenues are now $346,000 and the expenses are $350,000. That is, in my view, tight budgeting! There is no comparison with the ARRL where the budget is in the millions and the size of full time staff is one hundred times greater than the present full time staff at RAC Headquarters.

Get out there and beat the bushes, "voluntarily coerce" new members to join RAC, and do not put your renewal notice at the bottom of the accounts payable pile.

ATLANTIC CANADA

During the summer Bill Gillis VE1WG, Atlantic Region Director for RAC, accompanied VE7RD. In St. John's they attended the HamJam '95. This was a three day hamfest, fleamarket etc. From the report received this event was a success. Oscar Hierlihy VO1DI, member of the Order of Canada, presented RAC's President with an autographed copy of his book: "Memoirs of a Newfoundland Pioneer in Radio and Television."

While in Moncton, "Hoppy" met with the Regional Director of Industry Canada, George Richard and Al Daly, the Regional Manager Spectrum Authorization. He addressed the Moncton Amateur operators, and he also addressed the Amateurs of the Halifax area. In all three centres, the basic message conveyed was: "Amateur Radio in Canada - A Crisis of Support". (See the previous item in this bulletin.)

HIGH REPEATER

The Calgary Amateur Radio Association reports that ham operation has reached new heights in Canada! In May of this year the installation of the highest repeater in Canada, 3041 metres/9975 feet, was completed. This repeater VE6HWY (147.33+) is located on Protection Mountain. (I am reading this press release on the hottest day of the year and they are talking about snow depth of 4 feet. ... Ed.) It would be interesting to see a coverage map of this repeater and find out how the frequency coordination was accomplished.

INTERNET

There is literally an explosion of information available on the Internet and on the World Wide Web for amateurs and shortwave listeners. Over the next few months, we will try to collect and assemble an index of the WWW sites that could be of interest to you.

If you happen to know of some unusual sites located off the beaten track, please let me know so that we can add them to the list.

Presently RAC has a home page that can be found at the following address:

http://www.rac.ca/

This page is maintained by J.K. Pulfer VE3PU in Ottawa and like they say it is "Under construction". Visit this site and leave your comments for the builder.

SALTY ANTENNA!

When I read about this antenna in "The Racoon Times" from Iroquois, ON, I was thinking that it was the April issue. NO! It was a real story. The article was written by Gord, VE3UGW, and describes how to build a broadband 2 metre ground plane antenna by filling a piece of radiator hose with a saturated salt solution. Experimentation is not dead! Do NOT contact the editor for more info, write to VE3UGW for the real story...

NEW SECTION MANAGER

A new Section Manager was elected in August for the B.C. Region. He is Ralph Webb, VE7OM. He replaces Ernie Savage, VE7FB, who had been Section Manager for many years. Ernie has the distinction of having been the longest serving Section Manager in North America. Congratulations to Ralph and "Thank you" to Ernie.

RAC ELECTIONS

Nominations of candidates for the Board of Directors of RAC from Quebec, Ontario South (Postal codes L, M and N), and Alberta / NWT closed on September 1st. All nominations have now been validated.

Two candidates have been nominated for the region of Alberta/NWT. Ken Oelke VE6AFO, from Calgary, the current Board member for Alberta/NWT has been re-nominated. Alan Faint VE6TZY also from Calgary has also been nominated.

Two candidates will be in the running in Ontario South. J. Fergus Kyle VE3LVO, current member of the Board from Burlington Ontario has been re-nominated. He will be opposed by Geoffrey Smith VA3GS from Aurora.

And finally there are also two candidates in the running for the Quebec Region. Pierre Roger VE2TQS, current member of the Board from Montreal, has been re-nominated and will be opposed by Dave Goodwin VE2ZP from Aylmer Quebec.

Ballots will be mailed out to all paid RAC members in the contested regions on or before October 1st 1995 and must be returned to the Secretary of RAC before noon, November 17th 1995. The results will be announced in

December, and the new members of the Board will assume their responsibilities January 1st 1996.

QRP RECORD!

Last December 26, a new QRP record on 7.050 MHz was set by AA4XX and KA3WTF. AA4XX was able to communicate over a distance of 424 miles using 221 microwatts of power. The antenna was a three-wire beam. The miles per gallon, sorry miles per watt, were calculated to be 1,900,000 per watt.

Who says you need 500 Kw and a 25 Db antenna to communicate!
(QST Sept/95)

UPCOMING IN TCA
Rob Ludlow, VE3YE
Editor, The Canadian Amateur

The cover story of the October issue of The Canadian Amateur features an article on Canadian Amateurs involved with the MSAT satellite -a breakthrough in mobile communications.

There is also a sunspot cycle update. With indications that we are nearing the end of the current cycle, improved HF propagation may be on the horizon. An article explaining intermod interference, plans for a simple, effective, Dxpedition or portable HF antenna, a progress report on the new International Amateur Radio Permit, an announcement of elections for three RAC Directors, a Field Day scrapbook, a list of famous hams, and a list of ways to tell when it is time to retire from Amateur Radio, are also included in the October 1995 TCA.

All this plus, letters, Silent Keys, regular columns, DX and contest reports, HF propagation forecasts, special event stations, packet radio, Club News, YL News, QUA, ARES, Public Service, Section News, This Month in History, bench and homebrewing tips, antenna design, shortwave listening, coming events and the Swap Shop - all in the October issue of The Canadian Amateur, coming to your mailbox soon.

SPECIAL THANKS

Debbie Norman, General Manager RAC, contributes significantly to the editing and proof-reading of the bulletin. Also acknowledged are those who have forwarded items for the bulletin.

NEWS BULLETIN INFORMATION

The RAC News Bulletin is published monthly except July and August. The purpose is to circulate Amateur Radio news and information on a timely basis between publishing dates of The Canadian Amateur magazine.

All material in the Bulletin may be reprinted but please credit the Bulletin, the original author, and the original publication if one is given.

Please submit original stories or information to the editor before the 5th of the month of publication.

Annual subscriptions to the print edition of the RAC News Bulletin are available by mailing $10 before September 1. Subscription expires every August 31.

The RAC News Bulletin is published and printed by Radio Amateurs of Canada, 614 Norris Court, Unit 6, Kingston, ON K7P 2R9.

5090. Job offer : RF IC Designers

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-21 00:00:00 UTC
From: tritech@technet.sg
Message-ID: <43r2i2$kfo@raffles.technet.sg>
Source record: 238221

TriTech Microelectronics International designs and markets Application Specific Standard Products (ASSPs) and Customer Specific Integrated Circuits (CSICs) and is a sister company to Chartered Semiconductor Manufacturing within the Singapore Technologies Group.

Located in Singapore, in the centre of the expanding multimedia market and the growing Asian Telecoms market, TriTech is expanding its activities in these market areas and wishes to add new personnel to complement its existing team.

We have the following vacancies:

Principal Design Engineer (RF)

Qualification :
---
1. B. Engineering in Electronics or Equivalent
2. Post-graduate degree in Radio Electronics an advantage
Experience :
---
1. Hands on experience in RF IC design
2. Min. 8 years of IC design experience using Bipolar,Bi-CMOS and CMOS technologies
3. Project management experience at Senior/Principal Engineer's level
4. Established record of innovation through patents, publications in established journals
5. Systems level exposure preferred
Job Responsibilities :
---
1. To participate in the building up of a core group of RF IC designers
2. To participate in the definition/partitioning/specification of quality RF ICs
3. To lead and to design RF ICs to meet targetted specifications within established schedules
4. To participate in assessing/selecting appropriate technologies for cost effective solutions
5. To help establish an RF development environment - CAD, Lab etc
6. To ensure smooth interface between RF and baseband in design and test
7. To participate in productization - moving from development to production to customer.

Senior/ Design Engineer (RF)

Qualification :
---
1. B. Engineering in Electronics or Equivalent
2. Post-graduate degree in Radio Electronics an advantage

Experience :
----
1. Good academic record especially in related core subjects
2. Hands on experience in RF IC design
For senior position :-
3. Min. 4 years of IC design experience using Bipolar,Bi-CMOS and CMOS technologies for Senior Position
4. Project management experience an advantage
5. Record of innovation through patents, publications in established journals an advantage
Job Responsibilities :
----
1. To design RF ICs to meet targetted specifications within established schedules
2. To participate in assessing/selecting appropriate technologies for cost effective solutions
3. To help establish an RF development environment - CAD, Lab etc
4. To participate in productization - moving from development to production to customer

The successful candidates will be part of a core team of RF specialists who will establish an RF IC design capability for TriTech. They will be designing the first RF ICs in leading edge technologies for applications in the wireless communications areas. The RF ICs will complement the baseband solutions provided by TriTech and its associate companies so as to offer a more complete solution to customers.

Interested applicants please send a resume to:

Mr. Gregory Yuen
Principal Engineer
Communications Development Group

TriTech Microelectronics International
16A Science Park Drive #04-01/02
SINGAPORE 118228

: 2 meter.

: So if anyone has any suggestions, please email me..
: lawrence@en.com

: I'm just getting into this hobby, I have a million questions. If anyone
: would be willing to answer a few, I greatly appreciate it!

I would suggest getting an old IC-2AT. They go for around $100 with
all the extras. The radio is damn near indestructible in normal use, and
works well. This gets you operating without being overwhelmed by features
and price. Once you have played with the HT then you'll knwo better what
you want out of a fancier one. For now, you probably won't use but a small
number of the features on a higher priced model.

Hi,

I am in the market for a reasonably priced speaker mic for my Yaesu ft-530 and I though the RS Speaker mic might be a good choice. Can you post or e-mail me your experiences with this mic? Is it too big? Sound quality, etc. I would really appreciate any replies.

Thanks,

John Thompson

Not true. Clover and GTOR will get through with a signal you can't even hear.

: >
: > Hmmm. . . Anybody else ever do this?
: >
: > Does it sound likely?

Somewhere in the archives is info about tweaking an RS model...

: Possible, but why would anybody bother? All you would end up with is a
: radio that is capable of transmitting simplex-only on a single 6-meter
: frequency with a power output of 100Mw or less.

It's great if you have a mountain top. Also, some
walkie-talkies have unused contacts on their PTT switches.
You could switch in different transmit and receive crystals.
Since my six meter repeater is at my house, I don't need
much power to get into it. Some guy (I think it was Bob,
AJ9S) made a repeater out of two of these...

Why bother, you can probably get a Low band Motorola Handicom for $20-$30
and they have power outputs of 2 or 5 w and 1,2 or 4 channels. This is
the approach I have taken
to get on 6m in Akron. I also put a receive xtal for the kids baby
monitor in one of the channels so the rig does double duty.

>
>Aviation has done this for years. Just because I've got a commercial
>airplane ticket doesn't let me fly balloon passengers for money. I've
>gotta have a balloon rating on the paperwork.

It would make more sense than the current system, Jim, where testing
is unrelated to the privileges granted, IE pass a Morse speed test and
you get additional spectrum, whether you're going to use Morse on that
spectrum or not. But with your proposal, how do you handle a new mode?
Amateur radio is supposed to be an experimental learning environment.
We don't want to have to go running back to the government every time
we want to try something new, whether it's just new to us or new to the
world. And in the latter case, who's going to develop the test if you're
the only one knowing how the new method works?

We aren't carrying passengers, and we are tested on material that shows
we know how to generate RF safely and without causing undue harm to others,
though we could test more effectively for that, but the Morse speed test
doesn't contribute to those objectives. All it shows is that you can do
Morse at a certain speed, which doesn't matter if you aren't doing Morse,
and is also irrelevant if you are doing Morse since the fact you are doing
it is evidence enough that you know how. If you don't do Morse well, no
planes are going to crash into apartment complexes and kill a bunch of
people. There's a safety mission to testing flight skills with various
types of aircraft, but there's no longer a safety mission for Morse Code.
If you can't do Morse, you won't do Morse, no harm, no foul, just a
limitation on your own operating flexibility.

5104. Re: 49MHz talkie tweeked up to 6 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-21 00:00:00 UTC
From: wdr@world.std.com
Message-ID: <DF9BrM.65D@world.std.com>
Source record: 238271

[should this thread be in r.r.a.homebrew?]

The British magazine Practical Wireless, April 1995, had a cover article titled The Handy from Tandy, which details the 6m ham conversion of 49MHz license exempt transceivers, featuring the Radio Shack TRC-501, a 49MHz FM xtal-controld single-channel transceiver. Single and three-channel models are xtal controlled and thus easy to convert, while 5-channel models are synthesized and not as simple. Baby monitors are FM, but typically have insensitive, single-conversion receivers.

The article comments that the later TRC-505 is similar but doesnt come with a schematic diagram, and that the Jesan three-channel unit may be worth converting.

The steps in the TRC-501 conversion are (a) replace xtals & retune; (b) boost power; (c) upgrade IF filter; (d) replace antenna with BNC and impedance match.

A nice feature of this magazine is every project article has a side-bar written by a second author who attempts to follow the instructions given and provides comment. In this case, the second fellow got the Tandy maintenance manual and was able to (d2) simplify the antenna circuit (output was 50ohm already), (e) convert the CALL button to a squelch defeat, and (f) set it for max deviation.

They note that if using this QRP xcvr as the exciter to a power amp, harmonic filtration may be required.

As to what good is a 6m FM QRP rig, they suggest using them for rally control, local comms, and a novices first phone project.

Practical Wireless in imported into the US by Barnes & Noble; it may be available at some libraries.

>

I agree that speed is good when handling emergency traffic. Accuracy and the ability to get the message through is maybe more important. Having used about every digital method at one time or another, I have found that some digital methods fail when the singal drops below a certain level. This level also varies depending on the digital method being used. In virtually all methods, when the signal dropped off so that the digital method no longer worked, the signal was still strong enought that CW could have been perfectly readable.

The other argument is the type of equipment needed. Digital requires more complex equipment and higher power. Digital cannot be decoded by the human ear. CW is a very basic form of digital communication that requires only the most basic equipment and a human ear can decode it.

Regards,

Duffy - WB8NUT

Duffy, it looks like at least 80% of hams agree with you and even the
vast majority of contributors to this newsgroup...

Did you see the article on Page 79 of the October issue of QST yet?
Sounds like a GREAT book that could wake up a lot of older and younger
hams to the real light of day on these matters.
If ham radio is to survive, it must be both ADAPTIVE and also hold on to
the things that MAKE it AMATEUR RADIO. Otherwise it can be replaced by
laptop PCs, modems, and cellular services that obviate the necessity for
amateur radio. I am not a stick in the mud, but I *DO* believe that
home-built equipment should be tried by every ham.

Source record: 238276

Although this doesn't relate directly to Ham Radio, this seems to be the best area for an answers. I hope somebody can help.

Intermittently there comes across the screen of my TV & VCR, horizontal static lines. It was determined by the Cable Co fellow that these were caused by some device causing AC interference to leak into my homes cable network. My home cable network has many outlets that I use an amplified 4X splitter.

Anyway I CAN understand what he is talking about but here is my dilemma. Every time this random occurrence happens, I can go over to one of the wall light switches in the room, turn on the lights they control (just momentarily) and the static lines go away and usually doesn't come back for a while. The only other clue I can offer is that that happened once before than went away all together for months Just recently it started up again. I've turned off the obvious motor driven devices (AC, Frig etc) and no effect. The only effect is turning ON the lights even momentarily, then the static lines will stop for a duration of 5 minutes to a half hour??????
I suppose the load on the circuit the lights cause changes impedance but why only momentarily?

Does anybody have a any clue out there? Please also E-Mail me a copy of your response.

Sandy

>seems to set it off right at 22mph every time, heavy fog and strong winds.

Hmpf, that's interesting... so the defroster fan modulates it at the right rate to read 22 MPH?

When I got my first motorcycle, I was constantly being pulled over/ticketed for going ridiculously high speeds... like 55 MPH in a 30, and I'm certain I was doing just about 35 at the time. This bike had spoked wheels.

Bought a new bike, presto, no more stops, no more tickets. I know I didn't change my riding habits. This bike had alloy wheels.

Ya gotta wonder...

I didn't like the sound quality. I picked up one of the
MFJ types(non an MFJ though) at a hamfest. It's smaller, lighter,
and has better audio quality. The mic is just a bit too sensitive
, but I still like it better than the Radio Shack.

I like their headset though. It's not in the catalog yet.

In article s1r@news.sanders.lockheed.com, sbabb@k2.sanders.lockheed.com (Scott Babb)
writes:
}
}If I understand correctly, your argument here is that CW is necessary
}for emergency communications. I submit that in an emergency, the
}faster you can move emergency messages, the better.
}
}CW testing requirements dictate copying speeds of 5, 13, and 20 WPM.
}I have copied in the 25-30 WPM range, and I know hams who copy 50 WPM+.
}On average, however, I would think that an avid CW operator would be
}in the 15-25 WPM range. CW message relaying is a manual process, with
}errors introduced if characters are mis-copied.
}
}It took me 22.4 seconds to read the 75 words that I quoted above from
}your previous post aloud. This comes to about 200 WPM for AM/SSB/FM.
}Voice message relaying is also a manual process, with errors introduced
}if words are misunderstood. CW is probably more accurate than voice,
}since each word is spelled out, character-by-character, in CW.
}
}An HF AMTOR system runs at 300 baud. Using 10 bits per character and
}5 characters and a space for each word, AMTOR transfers messages at
}300 WPM. AMTOR message relaying is usually manual. Errors during
}AMTOR transmission are detected and corrected.
This is incorrect, AMTOR is 100 Baud, which would be 100 BITS/SECOND.
However, the true throughput is much lower because of the extra bits required
to make up the 5/3 mark-space ratio used in the error dection scheme and the
fact only three charaters are sent before an acknowlegement is requested.
Any errors and all three charaters need to be sent again.
}
}An HF packet radio system also runs at 300 baud. It provides the same
}300 WPM throughput as AMTOR, but message relaying is usually automatic.
Again, not true. On HF, the overhead is the main throughput
killer here. The frame headers are a major portion of each packet sent
because propagation requires small frame counts and small frames per
packet. And again, the data rate here is 300 BITS/SECOND maximum.
}
}A VHF packet radio system running at 1200 baud, and using the same
}data criteria as for AMTOR, transfers messages at 1200 WPM. The
}relaying of messages from source to destination is automatic, and
}errors during transmission are detected and corrected.

Again, same basic flaw. The data rate though is 1200 BITS/SECOND. The throughput
is much higher because the path is usually much better allowing longer
frames and more frames per packet to be sent.

}
}This data would tend to point in the direction of using a packet radio
}system for emergency data communication. When you consider the large
}influx of no-code licensees into the Amateur Radio Service, it becomes
}even more important *not* to rely on CW for emergency communications.
}You need to be able to transmit in a way that your intended recipient,
}and all of the relay points in between, can understand. If a message
}originates from a CW station, it will usually be relayed via a SSB
}traffic net or a packet network. This is simply because more hams
}can communicate more efficiently in those modes.
}
}A demonstrated proficiency in CW is required by the ITU for access to
}the MF and HF amateur bands. This proficiency requirement would be met
}by a 5 WPM test for all classes of amateur license with MF/HF privs.
}
}Scott - wa1vht
}
I'm afraid Scott in each of these you made the basic mistake that the baud rate is
the same as the WPM rate. In the case of all of these, where the modulation is
a simple single layer protocol, the baud rate/symbol rate/bit rate are all equal.
The charater rate would be the bit rate divided by the number of bits/charater
and to get Charaters/minute, characters/second would be multiplied by 60.

In multi-level schemes, the bit rate and symbol rate are not equal making
the throughput higher for a given baud or symbol rate - but these also require more
S/N ratio to be maximally effective.

An extremely good book on this matter is:"Digital Communications, Fundementals
and Applications" by Bernard Skylar.

It isn't for the faint of heart, the math is heavy duty, but it explains all
these relationships.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

In the October '95 issue of QST, Hal Ward (W1GE) wrote an article on a GPS patch antenna. One of the references he used to design the antenna was a book by David Pozar titled "Antenna Design Using Personal Computers". Hal also noted that the book was published by Artech House in '85 and is out of print.

It is also out of library. My library did a data search and came up empty. Does anybody know either (a) where I can get my hands on a copy of this book even if only for a day or (b) another good reference text for patch antennas. Neither Jasik nor Hamsher (my two antenna bibles) make any reference to a "patch" antenna.

You can post here or email me, whichever suits your fancy. BTW, I will obviously be willing to pay copy and/or postage costs for any of this information.

Thanks for your help, gang.

A few years ago, I modified a toy walkie talkie from 49 to 50.585MHz
It was a superregenerative reciever (el Cheapo) type toy. It uses just
one crystal, for xmit and recieve. Why 50.585? It's what I had
in the junk box.

Payed a visit to a ham friend, brought it along. We got a good laugh,
and then he fired up a crossband repeater setup he put together,
6M AM to 2M FM. I actually had a QSO using my toy, thru h the crossband
nad then thru a real 2M repeater. Took a while to explain the equipment
on my end!

John,
I, unfortunately, own a RS speaker/mic and my advice would be don't buy
one. If you don't want to spend the ridiculous prices they want for a new
speaker/mic, call up one of the mail order places, (I know The Ham
Station, (800)729-4373, sells used HT accessories.), and buy a used one.
Good luck,
Scott

SB PROP ARL ARLP040
ARLP040 Propagation de KT7H

Average solar flux and sunspot numbers were up just a few points this week over last. Geomagnetic activity was quite low, except for September 15, when the A index went to 18.

Solar flux may peak for the short term this weekend around 80, then drift back toward a minimum near 70 stretched over the first half of October. Look for active geomagnetic conditions from a coronal hole which returns October 2 through 5.

We are now moving into Fall, which should bring some seasonal improvement in propagation, although solar activity is so low during this part of the cycle that HF propagation is depressed.

Sunspot Numbers for September 14 through 20 were 0, 15, 11, 0, 0, 18 and 20, with a mean of 9.1. 10.7 cm flux was 69.5, 70.1, 69.6, 69.8, 71.6, 73.6 and 75.5, with a mean of 71.4.

John has an FT530 and it can be programed to use the HT's built in speaker instead of the speaker of the radio shack speaker mic. As a mater of fact, John can program the 2 meter side of the Ft530 to come out the HT's speaker, and program the 440 side of the HT to come out the Speaker Mic's speaker..

John, I recommend the large MFJ 284 speaker mike. It works well with my FT 530, and I think it sells for around $25.00... If you can not get one of those, then the Radio Shack Speaker mikes works well also.. Whatever you do, do not, I say again, do not waste your money on the little Yaesu MH18A2B speaker mike.. It is a piece of junk, The speaker in it is way to small to hear, and it is way to expensive..

Hope this helps..

Be careful here. What you want is a carbon-comp(osition) resistor, NOT a carbon film or metal film. Film type resistors (very common) are made by winding a "resistive film" over a form. I just chopped the paint off a Radio Shack 1/2 W resistor (271-1115, 470 Ohm) and it APPEARS to be a carbon comp type.

Good Luck!

Dale,

I have been using the VTech 900 for about 2 years. It has a digitally encrypted signal that is randomly reprogrammed any time you put the handset in the charger. Listening to its output is totally white noise. It chooses the best available 900mHz channel available.

They now have a high end version that handles 2 lines and has caller id on the reciever as well.

I've seen these as low as $149 recently.

I have used them near our 10m, 6m, 2m and 70cm equipment without problems,

It does get some transient noise when within a few feet of a microwave oven.

NiCads are a standard AT&T size and available at places like Best Buy, but at 2 years mine still work fine. My only complaint is the buttons get a little bouncy after a while. This sometimes causes me to dial 122-34567 when I wanted 123-4567. A new unit about 6mo old doesn't do this at all, so perhaps they've fixed that problem.

Is the Teaneck, NJ hamfest (by the BARA) still on? For when?
I've heard anything around here about it.

Thanks

...and it wasn't really a GOOD reason.

It's really illogical advocate the non-support of the very organization
that you are trying to get a service from! Something about biting the
hand that feeds you comes to mind.

I can think of a few good reasons to join and support the league myself

1. ARRL is (like it or not; I happen to like it) the de facto voice of
American amateur radio. In fact, as someone pointed out, if the FCC
pulls back even more (for funding or whatever reasons) from
administering amateur radio, the ARRL is certainly the likely
candidate to step in and fill the vacuum; not only is there
apparently precedent for this in other countries, but the trend here
is already clear (FCC used to give tests to hams; now the ARRL does
much of it).

2. So if you want a voice in how ham radio will shape up in the future, it
seems only reasonable that you should be involved at SOME level in ARRL,
whether a member-at-large, or some more responsible volunteer position.

3. Priced any comparable magazine subscriptions lately? ARRL membership,
with QST, the QSL bureau services, and the award administration, and
the advocacy of ham radio with the Government, etc, etc. Folks,
ARRL membership is a BARGAIN!

(A personal anecdote here. I sent some cards to the outgoing QSL
bureau with $2.00, not realizing the rate had been raised to $3.00
(Note: still a BARGAIN!). I got a polite letter back saying, in
effect: you didn't send enough money, but we sent your cards anyway;
Please send the balance back with this letter. How many businesses
would remit the service BEFORE you gave them the proper funds? I
think ARRL is good folks!)

4. I'm out of time, but you get the idea.

GA>outdated math requirement.

GA>Regards,

GA>Duffy - WB8NUT

you're comparing apples to oranges. there is a need to know basic
fundamentals such as math and how to read. there is no longer a _need_
for the code requirement. you can operate an hf rig without a straight
key. you can drive a car without knowing all about the engine and how
it works. you can turn on a computer and use wordprocessing software
without having to run the program through a disassembler and read and
understand every line of assembly code that was written to make the
software what it is.

i said this once before and i'll say it again: if you pro-code guys out
there are worried that removal of the code _barrier_ is going to show an

influx of young kids and ex-cb'ers onto the hf bands, you're forgetting something important. the average cost of an hf rig is prohibitively expensive, around $1500 and up, with few exceptions. many hams can't afford to even use hf, even if they could pass the code requirement. and the hams i know won't settle for small single-band kit rigs.

5139. This Week in Amateur Radio #130 (for air through 9/29/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-22 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <ptKimCc.sanderman@delphi.com>
Source record: 238106

Here is a summary of news items covered on edition #130 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 29-Sep:
-
1. Judges and Rules Announced for 1996 WRTC
2. Microsoft Admits Virus Has Plagued Windows 95 Installation
3. California Official Pushes for Monitor Measurement Standards
4. Prospective New Ham Joins Upstate New York Ham Family
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. "Amateur Radio Newsline" - Edition #945 from Los Angeles
7. Weekly Propagation Forecast with George Bowen, N2LQS
8. "The RAIN Dial-up" from Chicago
9. Upcoming Special Event Stations
-
Funding for the program's transmission and production expense was
provided this week by a grant from users of the N9SBH repeater
system, which carries "This Week in Amateur Radio" on 146.505 and
224.16 MHz in North Webster, Warsaw, Elkhart, and Fort Wayne,
Indiana. Satellite time and uplink equipment have been provided
by SKYVISION as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

5140. Land Mobile Radio FAQ needs your input!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-22 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <43ujg9$ej0@mrnews.mro.dec.com>
Source record: 238107
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

[This post lists all the information I'm looking for. You'll only have to look at this once in a while from now until the FAQ is ready - N1OOQ]

The Land Mobile Radio FAQ is now under way... I need your support!

What is it?

A listing of those surplus police and taxicab radios from the various manufacturers, how to identify them, what band they're on, how easy it is to tweak them into the ham bands, average price used, etc., all in one file for your flea market shopping convenience!

What it's not is a mod manual. You won't find out HOW to do the mods in the FAQ. That's up to you. You will find out where to get the manufacturer's manuals, most of which have detailed tuning procedures. Some of the radios can only be programmed by the manufacturer, and/or by using the manufacturer's proprietary software. Such details will be in the FAQ.

I'd like to include any and all mobile or handheld radios aimed at the commercial or public service market. Many of these out-perform the imported synthesized units by a long shot, are cheaper, and make great ham rigs! Let's put these great radios back to work and on the air!

I NEED YOUR INPUT TO MAKE THIS A REALITY!

You don't need to mail me manuals or anything like that, unless you WANT to. All I ask is a few bits of data for any of these radios you or your friends may have worked on in the past. If you've put one on the air, you've had to answer these questions, so fill 'em out and send 'em in!

Model? Manufacturer, model name (like Mastr II, Syntor, Delta, etc.), model number

Band? These radios are usually made for use in a specific band of frequencies, like 30-50 MHz, 150-170 MHz, 450-470 MHz, etc.

Freq control? Crystal, synthesized/ROM programmed, synthesized/microprocessor programmed

Average price? What did you pay? What prices did you see when shopping? New or used?

Manual price? How much did the manual cost?

Mod difficulty? How hard was it to get it tuned to ham band? Easy: re-crystal, tweak a few tuning screws

Difficult: program a new ROM, swap a few parts
Extremely difficult: Major modification and re-design
of some circuits, you must pay
authorized technician to use
manufacturer's software

How to indentify? What details do you need to know to tell these radios
apart? Does the serial number tell you anything? Does
the Model number? Are there physical differences?
This is the stuff you need to know when sorting
through the radios at the flea markets. This
information is usually in the manufacturer's manuals
in great detail.

I will re-post this notice about every couple of weeks for a while, until the
FAQ is somewhat filled out.

My net address is: randolph@est.enet.dec.com
All information, network pointers, periodical references, anything, is
appreciated, and thanks in advance!

-Tom R. N1OOQ randolph@est.enet.dec.com

5142. Re: ARRL - One good reason not to be a member!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-22 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <43vfrt$s1@safety.ics.uci.edu>
Source record: 238109
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Very bizarre thread here. The original poster has some trouble,
well documented, and it paints a picture of ARRL bureaucracy. This
guy has had some real trouble, and wants a simple thing - someone
to read over his cards for an award.

OK, then come in the ARRL defenders. These guys seem to have absolutely
no sympathy for the fellow, some even blame him for wanting something
to go smoothly. They seem NOT to recognize that the ARRL does have
some of the trappings of bureacracy, that that this is not a good thing
for any of us, even if the ARRL is a good thing overall.

I must except Ed Hare of the ARRL for his reasoned approach to the topic.

Hey, I am a member, AND I don't like dealing with seemingly nonsensical
bureaucracy. Bigger government is not better government and all that.
Why can't the ARRL trust one of its officials to do the job of certifying
the cards? What the heck is that about? He can't count or something?

Ever go to the City Hall and try to get a permit for your tower and ask
the "wrong" person and spend countless hours fixing the "error" which
should not be a problem except that "the rule is the rule!" That always
bothers me.

SO, all you ARRL supporters, YOU TOO can work to improve the image and
working ability of the ARRL by sympathizing with silly problems and
lending a helping hand or at least lending a sympathetic ear and then
advising of your preferred solution. It just seemed that a lot of energy
was spent trying to blame the guy for not doing it "your way". There
needs to be room to move around in here.

Clark
WA3JPG,
Member of the ARRL after years of open hostility to the ARRL. I joined
because of the amazing efforts of our Director out here - Fried Heyn.
Fried and I do not always agree, in fact, sometimes we have problems, but
the guy is there and lends an ear to my thoughts and feelings and he does
what he can about it when he can. I support that. He seems to do it for
ham radio in general. I trust that.

>bibles) make any reference to a "patch" antenna.

In the Third Edition of Jasik (edited by R. C. Johnson), patch antennas
are discussed in chapter 7, Robert E. Munson, "Microstrip Antennas."

The second edition of Kraus also has a section on patch antennas.

If all else fails, I do have a copy of the book you are looking for.
Pretty rudimentary stuff, and a bunch of BASIC programs in that book.
You are far better off with Jasik and Kraus; believe me.

>Oy, such arrogance! Get a life!

Get one yourself! And while you're at it, read the rest of the post.
Twelve years of commercial radio has taught me more about the overall
concept of radio than you'll probably ever know...Morse code excluded, of
course.

>DD>Which, as I understand, comes under review from time to time.
Believe it
>DD>or not, laws CAN be changed when the political will becomes
sufficient to
>DD>do so.
>
>You haven't had enough time to wake up and smell the coffee.
>The vast majority of hams disagree with you, so why keep beating your
>dead horse?

Where do you get your numbers? Reveal your source, please. Judging from
the fact that the number of no-code techs is increasing at a substantial
rate (and the overwhelming majority of these operators have NO INTEREST
whatsoever in learning Morse, other than to pass the tests), I would
guess this to be highly unlikely.

>Go operate. Get some experience. Learn something about radio, and save
the political smearing of CW for a few decades later.

Oh that's right, I forgot...you're so much more knowledgeable in radio
than I am. Excuse me.

>CW will be around as long as THIS ham is alive!

Don't bet on it. "The times they are a changin" (much to the chagrin of
"YE OLDE FAHRTZ")

>DD>operators who, in most cases, have no desire to learn an antiquated
>DD>system like Morse, I would guess that the political pressure on the
US
>DD>delegation will cause it to shift in favor of abolishing the code
>DD>requirement.
>
>Who cares. Let the idiots try if they want.
>You are just creating a lot of needless animosity against them.

Oh, so now anyone that is in favor of eliminating the burdensome and
outdated Morse requirements is an "idiot" according to you, right?

>DD>> We, the USA cannot simply disobey it! We could however drop the
>DD>>CW requirements to 5WPM, plain and simple.
>
>DD> Okay, I'm game for that. That's a great start...drop the 13 and 20
WPM
>DD>requirements and then we'll go from there.
>
>Just because YOU say so? Just because you are too lazy to earn a
>privilege and you want it handed to you? Typical.

You just don't get it, do you? Let's try another approach...YOU do not
own the amateur bands and YOU don't make the rules. When the political
pressure is sufficient (as it soon will be), the Morse requirement will
be eased, if not eliminated entirely...regardless of whether YOU approve
or not!

>DD>Maybe not...but the fact is that the Morse requirement is keeping
many
>DD>would-be, technologically-proficient young hams out of the hobby
these
>DD>days.
>
>A lie. You just said there are DROVES of no-coders (which is true)
>THEN you turn around and contradict yourself.

Not a lie. There ARE "droves of no-coders" (again, much to the chagrin
of "YE OLDE FAHRTZ"), but there would be many more if the code
requirements were dropped. The mere mention of "code" turns 'em off, in
some cases regardless of the fact that an entry-level no-code license is
now offered.

>Many people thought ice cream was useless until they tasted it.

When ice cream was offered, some people chose to try it and some of them
enjoyed it. But none of them were ever REQUIRED to eat ice cream as part
of their meal, were they?

In article <43pmqo$iv7@newsbf02.news.aol.com> kf2ti@aol.com (KF2TI) writes:
>read with must interest. let us not forget that the ITU noy YE OLDE FARTZ
>dictates that code be required to have HF privies, not the boys in blue,
>not the good olds boys not the prez the salamander, oooppps, the newt and
>all the other goof balls.
>
>it's an international convention we are part of and quite frankly, they
>don't want US amateurs to have free reign on the frequencies (maybe
>because we operate so nicely...RADIO POLICE, calling all RADIO POLICE)
>let's get on to other stuff

Who sets ITU policy? It's the member nations meeting in WARC sessions.
Who has been the principle obstacle to revising Article 32? It's been
the US delegation. Who sets policy for the US delegation? The Congress,
the President, the FCC. Who does the FCC say they let have their way
in amateur exam matters? The amateur community. Who is the amateur
community? You and me. Now to change ITU policy, we first have to
change the attitude of either you or me. Now the nice way, the civilized
way to change attitudes is not through venomous attacks on others.
It is not by calling them lazy, or sniveling whiners, because they
disagree with your dogma, though certainly some in the pro-code test
camp fit that description. The civilized way is through education.
It occurs by challenging and exploding myths and false dogma through
use of solid fact and theory. Is the horse dead, not yet, but he's
wheezing mightily and has been seen to stumble.

5148. Hams are a real gas (not my message).

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-22 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7990105251101@ccsnet.com>
Source record: 238137

The following messages were sent to me by a ham that is afraid to be identified beacuse of the torment most of you will put him through for having a different opinion. But it is how most young peeple feel (that is why they quit the hobby or never get in it). But you can keep thinking whatever you want and let ham radio die. Some say I send flames but I am not the author of below. I get lots of support and many messages like the ones that follow.

From: xxxxx@.xxxxcom
To: k1oik@ccsnet.com
Subject: You hate good news.
Date: Fri, 15 Sep 95 03:42:54

they like threats. they thrive off of it. i don't agree with everything you have said, burt. however, you are right on about several issues... one of them being the burping, farting, pants sagging in the crotch from too many handhelds on a waist that can't support them... i may carry a handheld, cellphone, and a pager all at once, but at least i'm not so out of shape that i have my pants sagging like they have a load in them. i stay somewhat in touch with reality... i liked the rabbit story. it made a pretty damn good statement... that's why they don't respond. many of them know that to take away code would allow intelligent people, people with more intelligence <gasp> than they are, into their little good ol' boys club.

no, not all hams that learn code are like what you described, only about i estimate 85-90% are like that, drooling with 10 handhelds on their belts looking like they're on some sort of mind-altering substance (too much rf overloading of the brain tissue). my group of friends and i all dress like we're the nightclub crowd for the underground scene... leather jackets with studs, some of us have half shaved heads (i'm probably one of the few that look almost normal), nocturnal, hang out on numerous 440 and commercial band repeaters, play paintball, get (raise eyebrows) exercise (i ride my bike at least 10 miles every other day), play sports once in a while, i love snow skiing, and take plenty of time out of the radios to go to the movies, spend time with my girlfriend (who just happens to like listening to the scanners with me once in a while to all the fire and pd activity), go camping, party...

seeing "young" punks like myself enter into the hobby bothers the oldtimer whiners and complainers on the local 2-meter boxes and the old fart elitist jerks that hang out on simplex on 144.245 around the valley here, badmouthing everyone and everything that stumble across them on their commute home. i think my area has the largest population of INACTIVE currently licensed hams of just about anywhere. many of these

people are interested in the "technical" aspects of ham, get their licenses, check into one of the local 2-meter high level boxes, hear all the old farts on all day pissing and moaning about colostomy bags, get dissillusioned and put their gear away in the closet. it's pretty sad.

they're so afraid that their little club will be "polluted" with fresh knowledge and arrogance to their little rituals that they lash out at any attempt to break the mold.

if you want to quote it, go right ahead, on one condition, DO NOT USE MY CALL LETTERS OR NAME OR EMAIL ADDRESS. i agree with the philosophies behind a great deal of your thinking, but i'm not going to put myself in a position where i get jumped on every time i respond or post in the newsgroup. i still find a few redeeming qualities in ham radio, and it is still (though more commercial communications / monitoring) my favorite hobby. i just happen to get exercise, prefer sex with my girlfriend over the radios, and eat somewhat decent food.

again, have fun with the quotes. just don't give me credit for them. i really have enough mail come into my mailbox on a daily basis without having to deal with drivel from some bloated cholesterol-laiden fuck who wants to discuss with me the merits of using a "bug" over a straight-key or trying to tell me how useless satellite communications are.

keep up the good work, burt. you're one of the few reasons i sti still read the newsgroup.

Radio Shack has a 900 MHz Digital Spread Spectrum phone that works great.
Current model is on sale to Sep 30 at $210. In new datalog it is to be
replaced with one that looks the same but adds 10 number memory (43-1084)
at $279.99.

You are on. Of course there may have been a typo error in the posting
by the FCC. I just attempted to access the FCC page I was looking at
the other night. I couldn't reconstruct the path and my Netscape
files do not show that I saved it. I do remember checking this point
at the time. I am sure it said "MHz". I will continue to try to
locate this file and will post a copy here with the URL if I am
successful. By the way, my cardiologist won't let me eat steak so
don't worry about losing the bet.

QST carries ads from various vendors selling ferrite based RF chokes
designed to suppress telephone RFI. The problem is likely RF getting
into the phone from the phone line acting as an antenna. Once in the
phone, the RF gets rectified by voltage limiting diodes which are
across the line to limit levels and provide a degree of protection
against lightning induced voltage spikes. By preventing the RF from
getting into the phone, the problem can be cured. Good luck.

This is an excellent point!!!! I am sick and tired of
the no code/code debate. As previously posted: "Stick a fork in it",
its done.

However, because there are those in this group who are predisposed
to endless, lively debate, can we please (pretty please?!?)
change the subject? The technical tests are too easy. Let's
talk about how to make them harder.

I assume that we want three things:
1. A legitimate purpose, e.g. A reservoir of trained
communication specialists. And to accomplish
any legitimate purpose effectively we need to:
2. Limit crowding on the bands.
3. Finally, I assume the code requirement will end one day.
Perhaps we can let the coders keep access to the
bottom 100 Khz of the bands (compromise position?).

Is there anyone that doesn't agree with the first two general goals?
To accomplish these things, we MUST make the tests harder before
we drop the code requirement.

No, it is not necessary. Is knowledge of CW important, I think so.
Let's use your argument below. Is math necessary, yeah but a computer
can do that for you, just like a computer can communicate for you. Why
do I need knowledge of math if a computer can do all the calculations
for me?

> Second simple question: Is math necessary to design electronic
>things? Hell, you need math for antennas. The college engineering

The theory of binary communications begins with knowledge of the most
basic form of binary communication, that is CW. So by your argument,
it is important to have an understanding of CW. 5 WPM is about as
basic of an understanding as you can get.

: >Where is the logic here?

: Gee, someone should tell these oh-so-technically adept people about
: the NO CODE TECH LICENSE!!!!

Why should they only have access to the 50MHz and above. What makes CW
the final arbiter for HF access other than the International Treaty
which requires ONLY the ability of CW at no specified speed. Why
should technically competent people be forced to learn CW at 13wpm
to be able to access the majority of HF amateur spectrum? Seems
to me that someone who passes 5wpm meets any International CW treaty
requirement and then the technology testing (General, Advanced and
Extra) should define the incentive licensing aspect of band allocation
by license class.

: Before we even THINK about eliminating the code requirement, we
: should end the practice of releasing all of the questions that are
: going to be on the test. THERE ARE NO technical tests of any
: significant difficulty under the current testing procedures.
: If these people are "top-notch technically", they shouldn't be
: afraid of a test that will prove their technical expertise.

Several points:
1. Much of the testing is and always will be rote memorization.
There's nothing besides memorization that will provide an answer
to amateur frequency band limits, FCC regulations, and a lot
of other stuff that ttest questions address.

2. One immediate way to improve the testing would be to have a set
of standard questions using various formulas (Ohm's law, etc.)
that do not have any fixed values in the question pool. Then, for
any individual test session, the VEs could supply certain values
for those questions which would at least force the test taker to
actually do the computation(s).

3. Like it or not, the vast majority of license testing (non-ham)
also includes multiple choice, etc. To provide for a relatively
easy way to accurately and fairly grade tests, there's just no
way to avoid multiple choice. Even in the 1950s when the FCC
didn't identify the test question pools, there was always the
AMECO test books and others that gave an almost total
set of possible questions. To do it any other way would be absolutely
undoable because of time.

4. Remember that Amateur Licensing isn't to mandate or pronounce
that the license holder is an "expert", but rather that he/she
has exhibited sufficient MINIMUM requirments to be allowed on
the air.

Sorry, but if that was true, then CW would be a basic building block
for all binary communications training and that is absolutely not
true today nor has it ever been true. I spent 20+ years of my
telecommunications career working on digital (binary) communications
and morse code (CW) was never mentioned even once in any telephone
company training as well as outside training by companies like TRA,
Datatech, etc.

In reality, CW isn't even true digital since it actual has more than
two states. It is not defined as simply off and on, but rather it is
off, on for a short pewriod (dot) and on for a longer period (dash).
Ignoring even that, there isn't anything one needs to know about any
specific coding scheme to understand or be an expert in digital
technology. I don't know anything about ASCII except that it is
a 7 bit coded character set, nor do I care. There are other codings
as well (EBSDIC, etc.). Bottom line is that CW is not a building
block to greater understanding of any ofthe many other modes being
used.

Having said all that, let me again state that I do NOT want to eliminate
CW use by hams at all, rather I find the CW requirement in todays
technological arena totally out of proportion as to its value or
need. Use it all you want, just don't force others to buy in to
the need simply because that's the way we've always done it.

Brian Ellsworth writes:

BE>Face the facts. Ham radio came about to protect commercial users of the radi
BE>spectrum.

Obviously, another REALLY intelligent statement, NOT!

BE>1 - New technology could be explored.

WHAT a revelation to us!

BE>Joe Ham could spend a great deal more time and money chasing down rabbit
BE>holes in search of developing some concept that commercial ventures could i
BE>afford to pursue.

Nonsense.

Some progress was made exploiting this approach. BUT for t
BE>most part, we are talking about days gone by. Don't look now but the table
BE>have turned. At this point the majority of hams (including some of the more
BE>vocal non-coders) are so far out of step with developing technologies they
BE>offer little if anything to improve the technical aspect of communications.

Again, that is no great revelation either. I think we all know that now.

BE>(for the 5% or less of you that really ARE researching new technologies I
BE>apologize. You know who you are:)

He he!

BE>The technical licensing requirements for this group need to be sufficient to
BE>keep them from causing problems for commercial spectrum users. Not to prove
BE>they were capable of actually developing a specific technology. With the
BE>equipment available today and the ever increasing number of users of all typ
BE>I seriously doubt that current testing adequately protects the commercial
BE>users.

Oh, I think the MANUFACTURERS do that already. Do you hear of many
RFI problems to commercial users by hams these days? I don't!

BE>Ham radio risks being tossed off the map as we increasingly lose the
BE>ability as a group to insure our stations operate within the bounds of good
BE>practice for the current level of technology.

Whaaat? Are you dreaming this stuff up?

BE>The technical requirements of
BE>our licensing SHOULD be increasing. But we prefer to approach it as we have
BE>days gone by...

You may have a point there - but face it, amateur radio is evolving and
we all have input to the whole result.

BE>At one time CW was considered to be an essential part of this training.

It still IS in case you haven't noticed!

For
BE>all the reasons repeated here over and over. It WAS the most reliable under
BE>certain conditions. Because it is the simplest mode the most basic level of
BE>equipment was required to use it thus the pool of potential operators would
BE>maximized. It WAS widely used and accepted by other &#65533;services&#65533;. But these ar
BE>&#65533;days gone by&#65533; my friend...

You sounds so superior there with that "my friend" bit!

BE>Other services have surpassed us with more
BE>reliable modes and systems.

Which services do you have in mind? What modes? As far as I know,
hams use them all, and few exceed CW in its ability to communicate
worldwide or over long distances, with fellow hams everywhere at a
moment;s notice!

BE>CW skills no longer insure a &#65533;common&#65533;
BE>communications mode with existing services.

But we are supposed to only communicate with other hams. What are these
"existing services" you cite? As to hams there are millions ready on CW
at any moment and I can always find a QSO in progress. Even when there
are ZERO sunspots!

BE>You can argue all day about whether we should or should not have CW as a
BE>license requirement but the REAL question is: Is the &#65533;emergency service&#65533; sti
BE>viable?

Is it what? Your lines are too long and have too many of those ff
things! Can't read it!

BE>What&#65533;s the point? Wake up hamies. Who really cares if CW is or is not a
BE>requirement. While you all piss and moan about keeping the stupid CW
BE>requirement, you&#65533;ll find the world has passed you by and someone else (perha

Who is piss and moaning? YOU are you oaf!

BE>Then we can all get together with our grandchildren point to the antiquated
BE>brass keys, long rendered obsolete tncs, ssb rigs, and slow scan systems and
BE>tell them wonderful stories about &#65533;days gone by&#65533;...

Obviously you won't be able to do that for obvious reasons... :-)

Date: 1995-09-22 00:00:00 UTC
From: brian.carling@acenet.com
Message-ID: <2a6.22557.545@acenet.com>
Source record: 238170

DD>Nope. Haven't done any of those things yet. Of course, the fact that I
DD>have been licensed for a grand total of 14 days might have something to
DD>do with it. Give me a few months, will ya?

Why am I not surprised Drew?
You talk like you are the final authority on what is and is going
to happen with ham radio, and you've been on a grand total of 14 days?

Oy, such arrogance! Get a life!

DD>Which, as I understand, comes under review from time to time. Believe it
DD>or not, laws CAN be changed when the political will becomes sufficient to
DD>do so.

You haven't had enough time to wake up and smell the coffee.
The vast majority of hams disagree with you, so why keep beating your
dead horse? Go operate. Get some experience. Learn something about
radio, and save the political smearing of CW for a few decades later.
CW will be around as long as THIS ham is alive!

DD>operators who, in most cases, have no desire to learn an antiquated
DD>system like Morse, I would guess that the political pressure on the US
DD>delegation will cause it to shift in favor of abolishing the code
DD>requirement.

Who cares. Let the idiots try if they want.
You are just creating a lot of needless animosity against them.

DD>> We, the USA cannot simply disobey it! We could however drop the
DD>>CW requirements to 5WPM, plain and simple.

DD> Okay, I'm game for that. That's a great start...drop the 13 and 20 WPM
DD>requirements and then we'll go from there.

Just because YOU say so? Just because you are too lazy to earn a
privilege and you want it handed to you? Typical.

DD>Maybe not...but the fact is that the Morse requirement is keeping many
DD>would-be, technologically-proficient young hams out of the hobby these
DD>days.

A lie. You just said there are DROVES of no-coders (which is true)
THEN you turn around and contradict yourself.

We have grown up with computers, digipeters, etc. and just don't
DD>see the need to learn "dahs" and "dits." Seems about as useful as smoke
DD>signals.

Many people thought ice cream was useless until they tasted it.

DD> The No-Coders here in LA are upgrading like mad..what's keeping
DD>you from HF use? IT'S YOU! Now go listen to those tapes for a solid 20
DD>minutes....and do it again tomorrow...you'll make it!

RIGHT ON!

Question: how many commercial radio folks do we have among us?

There's a small group of us here in the Charlotte area, and we're trying to get a late-night radio broadcasting net going on one of the local repeaters here. Fortunately, we have a couple of wide-coverage machines located on mountains and TV towers which cover a large portion of both North and South Carolina, and we're planning to use one of those. We need a few more interested participants to make it work, though. How about you? Interested?

OK, Burt, put up or shut up. "It is how most young people feel"?
References? Clue? Nope, I guess not.

>is why they quit the hobby or never get in it). But you can keep
>thinking whatever you want and let ham radio die. Some say I send flames
>but I am not the author of below. I get lots of support and many
>messages like the ones that follow.

Not only is the author a twit, he's also a coward--"post it
everywhere, so everybody will be pissed off, but don't say who it's
from, so I won't catch any of it." Is it really to much to ask for
people to defend their opinions and take responsibility for them?

It's a bad idea to make sweeping generalizations, Burt. You know
that, at least sometimes--if I've met a few Jews who are crooks, and
then say that "all Jews are crooks," all of a sudden I'm a Jew-hater,
which is the height of all evil on earth. Of course, if that happens
with a German, it's all right. Same thing goes here--some hams are
certainly the way your anonymous pal described them, but the statement
that 90% of them are is sheer idiocy. Ditto with "most young people
feel this way." How the hell do you know?

5185. GB2RS News 24th September 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-22 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <811821463snx@llondel.demon.co.uk>
Source record: 238174
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 24th of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB has issued the following statement regarding the post of Emergency Communications Officer:

We are more than aware of the debate currently taking place about the replacement of the RSGB Emergency Communications Officer. However, much of the comment is ill-informed and speculative. It is therefore important that the membership is made fully aware of the reasons for the change in post holder.

It is some years now since the first appointment of an Emergency Communications Officer was made and there have been enormous changes in the approach of the subject since that date.

With these changed circumstances in mind, Council considered it was imperative that a review of Society policy take place. Such review would need to address how the Society interfaced with other organisations in this important and public serving aspect of amateur radio. It therefore charged the Membership Liaison Committee with that responsibility and requested recommendations at an early date.

That review policy is currently taking place. In the meantime, however, it was judged more appropriate to appoint a person on a temporary basis to assist the MLC with the task. The person needed for this important task, whilst fresh to involvement with the RSGB in this field, would require considerable experience in emergency communications. The person selected fulfils those demands and will, more importantly, bring a fresh mind to the debate.

It is hoped that this statement will allay members' fears about the reasons for a change of direction.

Further to the policy statement, RSGB Council has announced the appointment of Mrs Joan Heathershaw, G4CHH as the Society's Emergency Communications Officer. The appointment is to be temporary during a policy review of the RSGB's relationship with organisations in the public serving aspect of amateur radio. Mrs Heathershaw is QTHR and can be contacted on the new RSGB ECO telephone number 0956 708873.

A World Radio Conference is to be held next month. At the Conference, the New Zealand government is to propose the abolition of the international requirement for radio amateurs to pass a Morse test prior to being permitted to use the HF bands. It is understood that the UK is

intending to support this proposition. The Radio Society of Great Britain has protested to the Radiocommunications Agency that the decision to support New Zealand runs contrary to the views of UK radio amateurs expressed in a survey carried out by the Society at the RA's request in 1993. It also appears to ignore the policy of all three regions of the IARU.

All RSGB members have been sent copies of the correspondence with the October edition of Radio Communication. Non-members may obtain copies by sending a self-addressed envelope, with a first or second class stamp on it, to 'Morse Letters', RSGB, Lambda House, Cranborne Road, Potters Bar, Herts, postcode EN6 3EJ.

It should be noted that the proposal concerns the international radio regulations and will not necessarily affect the UK licensing requirements.

The 25th of September marks the 40th anniversary of the first RSGB News Bulletin. The first ever broadcast was transmitted from the station of Frank Hicks Arnold, G6MB, in Walton-on-Thames, Surrey. Following the reading of the news, the test was keyed on CW by Joe Hill, G3JIP. Our thanks to Mr G Alderman, G3JXA for reminding us of this anniversary.

Following a review of recent jointly-sponsored RSGB / Radiosport events, the Society has decided not to continue with this liaison for the 1996 rally season. The Society will continue to promote the RSGB VHF Convention at Sandown, the RSGB National Mobile Rally at Woburn Abbey and the RSGB International HF Convention at Windsor, as well as continuing with its policy of attending a large number of exhibitions and rallies throughout the United Kingdom. The Society would like to thank Radiosport for their co-operation throughout 1995.

The RSGB sends its congratulations to Richard 'Dick' Leeves, G2LV, who celebrates 75 years as a radio amateur on the 27th of September. A photograph and more details can be found in the October issue of Radio Communication.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Libya, SP6RT and SP6AZT hope to be QRV until the 5th of October as 5A0A, mainly CW on 160, 80, 40 and possibly 15 metres.

From Uganda, 5X4F has erected an antenna for 160 metres and is QRV daily at 0300 UTC on 1831kHz with 100 watts, but he has high QRN.

And from Haiti, Daniel, HH2/F5OKX will be QRV for six months from the end of September. He will use CW/SSB on all bands but mainly on 20 and 40 metres for Europe.

Now news of a special event station on the air from next weekend:

The callsign GB125BRC will be operated from Paddock Wood, for a period of 28 days from Sunday the 1st of October for the benefit of Kent Red

Cross.

Next the Rally News:

The North Wakefield Radio Club Rally will take place at Outwood Grange School, Potovens Lane, Outwood, Wakefield, today the 24th of September. Doors open at 11.00 am, or 10.30 am for disabled visitors. Morse tests will be available on demand - please take two passport-size photographs with you, together with the test fee, if you wish to take your Morse test at the rally.

The Three Counties Radio Rally also takes place today, the 24th, at Malvern in Worcestershire.

The World Association of Christian Radio Amateurs and Listeners 1995 Conference will be held at Weston-Super-Mare between Friday the 29th of September and Sunday the 1st of October. For details, contact Dr Geoff Petersen, G4EZU, whose address is correct in the latest RSGB Call Book.

The Amateur Radio Caravan and Camping Club Rally also takes place from the 29th of September to the 1st of October. For details telephone 01462 811208.

The Blackwood and District Amateur Radio Society Rally takes place on Sunday the 1st of October at the Community College, Oakdale, near Blackwood, Gwent. Doors open at 10.30am. Details may be obtained from Norman, GW0MAW, on 01495 227550.

Also on the 1st of October, the Great Lumley Amateur Radio Rally will be held at the community centre in Great Lumley, near Chester-le-Street, County Durham. Doors open at 11.00am, or 10.30am for disabled visitors. Children accompanied by an adult will be admitted free. Details from G1JQT on 01207 237927.

GB3LR, the FM voice repeater at Newhaven, East Sussex, has been off the air since the 15th of September because of an equipment failure. It is due to become operational again shortly.

Meanwhile, the ATV repeater, GB3HV, is now back on the air after a week of maintenance work and repair to a failed power supply.

Now for the HF contest news:

Another session, of the RSGB 80 metre Slow CW QRS Cumulative contest takes place on Thursday the 28th of September. Rules are on page 83 of the August RadCom.

The RSGB 21/28MHz SSB contest takes place on Sunday the 1st of October from 0700 until 1900 UTC. The rules are on page 80 of the June RadCom.

Next some VHF contest news:

The RSGB 70MHz Trophy and Listener's Contest takes place today, the 24th of September from 0900 to 1400 UTC. The rules can be found on page 83 of June RadCom.

On Thursday the 28th of September the third session of the 144MHz CW Cumulative contest takes place. Rules are on page 81 of the May RadCom.

And now the solar factual data:

The period from the 11th to the 17th of September saw solar activity at very low levels, and geomagnetic levels up to active conditions on some days. Sunspot numbers were down to zero on several days, but did increase to 15 by the 15th. The mean for the period was 8. Solar flux levels remained very steady and averaged 69 units. No solar flares were reported. The electron fluence increased from moderate levels to very high levels by the 14th but then declined to high levels for the rest of the period. The x-ray flux remained at its minimum value of A1.0 units for the duration of the period. The 90 day solar flux average on the 17th was 73 units, the same as last week.

Geomagnetic conditions started the period at active levels with an Ap index of 28 units on the 11th. Conditions briefly fell to unsettled levels before returning to active conditions by the 15th with an Ap index of 30 units. On the 15th, the solar wind particle density was at moderate levels with about 15 particles per cubic centimetre. Wind velocity was 450 km per second. The quietest day was the 14th with an Ap index of 10 units and the average for the period was Ap 17 units. The aa indices, as supplied by the British Geological Survey for the period from the 5th to the 11th of September, recorded conditions at sub-storm levels at the start of the period, with 48 nanoTeslas on the 5th. Levels increased to 54.5 nanoTeslas by the 8th. The average for the period was 38.1 nanoTeslas, about K3.

I'll repeat the figures: spots - 8, flux - 69, Ap index - 17 units, x-ray flux - A1.0 units.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 8th to the 14th of September, saw levels decline from 6.7MHz on the 8th to 5.4MHz by the 11th, with an average of 6.2MHz. The darkness hour lows averaged 2.6MHz but were down to only 2.1MHz on the 8th. The daytime highs took place between 18.00 and 20.00 hours except on the 14th when the high took place at midday. The darkness hour lows took place at 05.00 hours every day.

I'll repeat the figures: highs - 6.2MHz, lows - 2.6MHz.

And lastly the solar forecast.

This week the quieter side of the sun will be rotating into view. Solar activity is expected to be at very low levels but a few sub flares could take place in the first half of the week. Solar flux levels are expected to decline to the low 70s. Geomagnetic activity is expected to be mostly quiet. Ionospheric MUFs for the south during daylight hours are expected to be about 18MHz and 15MHz for the north. This figure could increase slightly if the predicted geomagnetic field remains at quiet levels.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Lima and G7 Victor Uniform series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Lima series.

[snip 6 articles about nothing]

Come on you people!

It's a stupid pissing contest. Both sides are listing their reasons Pro and Con, and it has all been said before. The reason you became a Ham was because you had an interest in radio, or a friend who was involved.

Spend your time and energy wisely. To drone on and on about a political condition is a waste of time and energy. Learn about electronics, learn about mathematics, learn about being polite, learn to enjoy friendly conversation.

This whole thread has been about politics, and in the end no one is empowered or served. What will your political choice do for me? How will my life be better if your political party (pro or con CW) gains power?

I think you know. My life, the common mans life, won't change one bit if CW testing goes away, or stays. If there was no CW, political groups would find another cause to celebrate.

SB QST @ ARL $ARLB087
ARLB087 FCC notifications begin

ZCZC AG54
QST de W1AW
ARRL Bulletin 87 ARLB087
From ARRL Headquarters
Newington CT September 22, 1995
To all radio amateurs

SB QST ARL ARLB087
ARLB087 FCC notifications begin

The FCC has begun mailing notices of upcoming amateur license expirations. Those amateurs whose licenses would expire in December 1995 are being sent, by first class mail, a computer-generated Form 610-R ''short form.''

The Commission's Gettysburg facility expects to mail more than 5000 such notices this week, covering expirations from December 1 to December 20, 1995.

The new Form 610-R may be signed, dated, and returned to the FCC to renew the license, provided that no changes (such as address) are needed. It will be permissible to correct misspelled words. For other changes along with renewal, it will be necessary to file a regular FCC Form 610.

For some time the ARRL has been sending license expiration notices as a free membership service. That service will be discontinued once the new FCC program is established.

There is no monetary fee for an amateur license renewal.

5190. Reason for code test?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-22 00:00:00 UTC
From: P22407@email.mot.com
Message-ID: <1995Sep22.184543.8745@schbbs.mot.com>
Source record: 238179

There are only TWO reasons I can see that I should be required to know code even though I have no intention of EVER using it:

1. It is a screening process of hams to make sure that I am serious about the hobby (I equate this to hazing).

2. It is a way for hams to artificially increase interest and/or traffic in CW.

There is really no good reason that I must know code.

When I upgraded my drivers licence from an operator to a chauffeur, they did not require proof of proficiency in handling of a horse drawn buggy! :)

My advice to everyone is ignore Drew. He does not wish to debate, but make accusations, assumptions, name calling, personel attacks and threats.

When he had his license for 5 days, him and I engaged in a exchange which he ended up doing most of those things above. It got so bad, I had to ask him to stop, and, have my server lock him out of my mail box. (he has been mailing me at least once, my server lets me know about bounced back messages)

Not only is Drew in the wrong group (should be in "...policy"), he also has been able to form an opinion about the entire HAM licensing structure in 15 days...the time since he was first licensed!

Isnt it amazing how soon one forgets about the HAM "fellowship" so soon after being licensed? I also wonder why someone who hates HAMs so much...would want to become one?

(sigh) I acually feel sorry for this guy.....

If those who want a code requirement for use of the HF spectrum are to be referred to as "Ye Old Fahrtz", are we to assume that those against the enlightenment of learning the code should be referred to as "The Young Dumbs"?

Regards,

Duffy - WB8NUT (and still not over 40!)

I am looking for images to spruce up my ham radio web page. Right
now, there are no images and it looks boring. I could check out each
and every web site listed in the Yahoo Amateur Radio listing, but that
would take me forever. I'm not looking for you to send me images
(unless they are not otherwise available via WWW or anon FTP), but
pointers on where to look.

BTW, the URL to my page is:

http://www.afn.org/~gars

Thank you for your help.

I had a few monts ago a file that had hundreds of mods for Ham's and Scanners. I have since lost it and can't figure out which site it was on.

I was wondering if anyone had this type of files (handled Radio Shack scanners, Yaesu's, and all the other scanners and radios).

If you have it, or can get it - please drop me some email.

Thanks in advance.

> So while they give 6 digits for lat/long and 6 for the grid sq, they're
> really only good to about 3 digits on lat/long and 4 for the grid sq.

The lat/long is good enough for a program like Geoclock (which has
a Buckmaster CD interface) to figure the correct beam heading and
bring back the name and address on the ham. It even will give a
beam heading for the other ham to aim his beams at you. I've used
all three (Buck, QRZ and AMSOFT) and I like Buckmaster the best.
It has the much better foreign database.

I heard a rumour that the Flying Horse Call Book was going to put
out a CD/ROM with all the callbook databases. Anyone heard anything
definite on this?

Gee, someone should tell these oh-so-technically adept people about
the NO CODE TECH LICENSE!!!!

Before we even THINK about eliminating the code requirement, we
should end the practice of releasing all of the questions that are
going to be on the test. THERE ARE NO technical tests of any
significant difficulty under the current testing procedures.
If these people are "top-notch technically", they shouldn't be
afraid of a test that will prove their technical expertise.

In the days before mechanical bilge pumps, bailing was all that
kept many a ship from going down. But today there *are* mechanical
bilge pumps, so the need for manual bailing has declined. Movies
aren't real life.

My example was deliberately extreme in order to form a reducto absurdium.
I could give countless others. For example, I suppose your philosophy
wouldn't let anyone turn up a thermostat before they'd learned to rub
two sticks together to make fire. It's the same thing. Skills with
primitive techniques become unnecessary when they are supplanted by
better methods. That doesn't mean that people shouldn't be taught that

friction generates heat, it just means that they no longer need to demonstrate a practical mastery of the primitive art before warming themselves a better way.

>: The highest levels of technology are usable without demonstrating

>
>I do agree completely, but like the scientist said in the movie
>Jurrasic Park (to paraphrase), "You're standing on the shoulders of
>giants, but you have no respect for the technology that got you there"

Ah, yes, the anti-technology argument, found most often in bad 1950s ScFi movies about atomic bomb mutated monsters, but now updated by Spielberg to use the new boogeyman, genetic engineering. The funny thing is, giant ants and 50 foot tall women never did come crawling out of atomic test sites, and it's unlikely the new boogeyman will present any either. When Godzilla trashes Tokyo for *real*, I'll take this line seriously. Meanwhile, the Jeremy Rifkins of the world can continue to make a buck by frightening the technically illiterate about mutated tomatoes stalking Omaha.

>I don't mean that you, Gary, (or anyone else for that matter) shows no
>respect for technology, that is not my point at all.

I hope not. I have a very great respect, and affinity for, technology, the higher the technology the better. However, primitive technique is only of historical interest, and not something I'll waste much time developing practical skill in applying when there are better methods readily available.

>My point is that before I can understand how digital communications work,
>I have to know how ASCII is encoded. Before I can design and build a

>than you are today, someone is going to need to know how to make it
>work even better. And that person is going to know the underlying
>principles, they will understand why things work the way they do, and
>they will have the insight to make it work even better.

I'm a firm believer in understanding principles, but that's a
completely different thing from being adept at *practicing*
primitive technique. I could stalk my lunch in loincloth,
carrying only a spear, but I prefer to use a rifle with a
nice telescopic sight while wearing my Goretex camos. That
doesn't mean I don't understand the principle of stabbing
and cutting, just that I don't practice it when there are
better ways. I don't have to recreate the experiments that
led to Faraday's law in order to use the results in practical
work. And I don't have to hand code ASCII quickly in order
to understand what ASCII is about.

>Morse may or may not teach us underlying principles, but I think that
>they give me at least, a deeper understanding of radio in general.

Indeed, Morse serves little purpose in teaching radio principles,
other than to serve as a bad example of encoding design for decoding
on a noisy channel. It seems, in fact, that Morse has led many astray
as to the real underlying principles of encoding intelligence on an RF
signal. Only a short while ago, we had an Extra claiming OOK was not
modulation. And we keep seeing the misconception that OOK Morse gets
through when nothing else will, and that Morse is language.

The messenger has been confused with the message. In fact,
OOK is modulation, a form of AM, though not the best one for
getting through in harsh conditons. And Morse is an alphabetic
encoding, though again not the most efficient one for low error
rate decoding on a noisy channel. That's hardly surprising,
however. Like rubbing two sticks together to make fire, primitive
methods are rarely the best methods. Even the mountain men carried
flint and steel rather than a bow drill to light their evening
campfires. Today we have matches, or a BIC lighter, though more
likely we've got a piezo ignited gas grill in our RV. That doesn't
mean we no longer understand that fire is hot.

communications reserve of the State of California
Governor's Office of Emergency Services

RB397 MGT Activation 1/3 - For release 9/25/95

Activation - Some thoughts and Reminders.
Operations Procedures for Radio Officers

When notified to provide emergency operations assistance (which
can be communications or other related activities) the Radio
Officer (RO) makes an initial evaluation of requirements versus
the capabilities.

Assuming there are trained components available, the RO then
initiates the call-up of the required resources, whether it be a
one-person response or an on-going 24 hour day-to-day operation.
If there are NO trained components available, and no standing
agreements, the RO uses the area support structure for getting
or accessing resources. In California, County Radio Officers can
obtain needed communications resources via a State OES mutual aid
system. The State OES Region Radio Officer serves as the point of
contact to obtain resources from other areas. This saves the
RO much calling; only one call is required. It is also beneficial
for alerts of potential needs "just in case"!

Where an on-going operation requires a Net Control Station, the
RO assigns the NCS (unless there is a Standing Order in effect
that does the same thing.) If there is no Frequency Standing
Order or plan-designated ones, the RO designates the
frequency(s). There are a variety of ways in which net(s) can be
setup. The complexity of the situation dictates the results in
general terms. Operationally, a command frequency is needed; a
resource frequency and others may be also needed. Much depends on
which type of EOC or command post is involved.

The RO, or a designated Shift Supervisor, sets up the initial work schedule for radio or other communications equipment operations (where and if involved). This could include a person assigned to follow up on persons that may not have been contacted under the initial alert or call-out procedure (where applicable). (Continued, next week)

Scott - DX clusters are specialized packet radio bulletin boards that exist for the purpose of distributing DX "spots" (reports of stations heard) and other related information. To get connected to one you need a packet station (VHF radio, TNC and computer or terminal); just connect to the call sign of the local cluster and it will feed you spots as long as you stay connected. There are also various search functions to get old information; the sysop of the node (as well as the built-in help system) will be able to give more information. Following is a list of such systems in Southern California, as obtained from a file put together by K6PBT and distributed via the PC-GO BBS.

Southern California DX PacketCluster System:

Bermuda Dunes W6EEN 145.690 (Palm Springs)
Chino N7QQ 145.660 & 144.490 (Inland Empire West)
El Segundo K6EXO 144.490 & 145.690 (South Bay, Central LA,
San Gabriel Valley)
Fullerton K6QEH 145.680
Hemet KM6LM 144.950 (Hemet/San Jacinto Valley)
Oxnard/Ventura N6VR 144.915
Palmdale K6GXO 145.660 (Antelope Valley)
Ramona KD6HRO 145.050 (Limited Cluster)
Redondo Beach AA6SF 145.690 & 144.950
San Diego K6JYO 144.950 (San Marcos)
San Diego KM6K 144.950 (Kearney Mesa)
San Diego KA5Q 145.690 (Fallbrook)
San Diego N6ND 144.360 (Pt. Loma)
Santa Ana N6HVZ 145.605 (Serving West Orange County)
Santa Maria N6MB 144.950

5213. [WANT] Articles for paper *URGENT*

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-23 00:00:00 UTC
From: scotte@ccs.neu.edu
Message-ID: <4419fo$6sl@camelot.ccs.neu.edu>
Source record: 238037

I am planing to write an English paper for a class urging government to declare Amateur Radio frequencies the equivalent of national parks. The idea of having amateur frequencies as protected space was presented at a recent radio club meeting I went to. I want to take action on it.

To aid in my quest, for the preliminary state, I am asking for any and all articles and references to articles in magazines, newspapers, journals, etc, which show how amateur radio was used to aid in some way, be it an emergency situation (the recent hurricane to hit the US Virgin Islands), the great earthquake of California during the World Series, articles about people being stranded somewhere, and how ham radio was used to save a life. The more situations, big and small, the better.

If I can get copies of these articles, or at least references to the publications, dates of publication, issue numbers, etc, they can all help show real-life examples of amateur radio in action.

All references to publications would be greatly appreciated.

Thanks much.

>fault of Newington?

It's just a scrap of paper! If anyone writes the ARRL for an award, after getting a local runaround, they ought to check his cards and give him the lousy thing. Sheesh.

Instead they make a big deal out of it by telling him they can't help, and he must find someone else to count his cards. It's not like it'san Academy Award or anything. It's a lousy scrap of paper!

Here's my suggestion:

Have your 3 year old kid write "I love Daddy" and stick that on your wall. Then forget about the ARRL paper.

Paper hangers are the lowest form of life on earth. They usually don't have anything in mind but themselves. You see them on the net with signature lines over 1 line, and all sorts of attachments. The ultimate paper hanger is a Mensa member. As an example, what have you heard about Mensa members in your town? What need in society do the fill? The answer is none, none. Their in it for the paper.

"Paper Hangers will be shot on sight" Gen Patton

: How about "We are the sole voice of the amateur radio community"?

: BUZZ! WRONG!

: No organization with that kind of arrogance gets my money, regardless of
: 'service' or any other criteria. Period. End of discussion.

Good try..but try being practical here for a second.

Answer the following questions.

1) What other organization has as large a membership percentage
wise as the league.

Answer: No other organization comes close.

2) Who does FCC hear from, and listen too, i.e. recongize as the
operational representative of amateur radio.

Answer: Only ARRL can claim this distinction. There are
certainly other groups that reply to NRPM's etc
TAPR, and QWCA come immediately to mind....but both of these
groups are minority special interests when compared to the
broad interest base that the ARRL brings to the table.

So, I think you can make all the claims of arrogance on the
part of the ARRL you care to.. but as a practical matter,
they be the only game in town. I'd rather be a joiner and
consequently an active participant, rather than sit on the sidelines
and throw mud as some people would. I don't think the sidelines
modus operandi is particularly useful, successful, helpful, or
kind.

Go to a library that has the old QST's on microfilm. QST loves to publish
articles of this type. Each year will have many.

To balance your paper, you must also state the opposing view, and make
arguments against that. You will probably need to look for problems which
the Park Service has.

For example a current debate is the Alaska park where Oil Companies want
to develop. They want to make money, provide jobs, and grow the economy.
They want to reduce Oil imports which are subsidized by taxpayers and paid
to foreign companies out of the treasury. They want the U.S. to develop their
own resources but can't because others want to leave the parks void of humans
other than tourists.

Now apply that to Amateur Radio. You have a park that allows human visitors.
Only these visitors must buy a license. But the same argument applies, that is
the spectrum could bring jobs and income to many Americans; The U.S.
subsidizes these frequency parks through the taxpayers.

Argue that subsidizing anything by taxes which everyone must pay (even if they
never go to the "Park") is a good, and jobs and economic growth are bad.

>the cards? What the heck is that about? He can't count or something?

I believe the rational behind this policy is to have
knowlegeable people checking the cards who might be
better able to spot cheating. For instance, I know
that WA2LTM works 432, 1296, 2304 MHz. A card
for 903 MHz needs further investigation...

In New England, Emil, W3EP is usually available at the NEWS
meetings held 4 times a year in Vernon, CT, just off I84.
While we have even had Bill Burden, the Division Director,
in attendence, I doubt that Bill could do a better job of
checking cards for VUCC awards. The next meeting is November
9th, 1995.

>was unreasonable, and the reason he got flamed. If they'd refused to

OK, that is true. I also believe the ARRL RULES in this case are inflexible
and I don't like that personally. If another ARRL official signs the
certification, what the heck is wrong with that? That irks me, when
the rules seem to become more important than the people. OK, OK,
the guy does sound like a bit of a whiner, but I don't feel that deserves
an absolute strict interpretation of the rules, but that seems to
happen all the time.

>tell him who the checkers were, then he'd have a beef. But that didn't
>happen. Or if he'd tried the checkers and they'd screwed up his award,
>then he'd have a complaint. But none of that happened. He went looking

That is it. He needed to follow the rules precisely to deserve some
empathy? OK, I understand this, it is completely logical, but I would
like a little more "heart" in the organization. Apparently there is
some, and Ed Hare is going to work with the guy.

>his award. Suppose he held the winning lottery ticket, but *refused*
......
>from a boxtop. Would you be amazed if he didn't get the check from the
>lottery board? Following the rules is part of the game.

Not at all. And that is part of the problem as far as I am concerned....
not that a multi million dollar ticket must be carefully scrutinized,
but the "people must conform to the machines that serve them"
feeling I get from that.

Knowing your posts from this group, Gary,
I know you are not touting the beauty of precision rules. You seem
to want this guy to understand reality and take personal responsibility
for getting his award. You are absolutely right, if he wants the award,
he knows how to get it. I am reacting to what I perceive as ARRL's
growing tendency to put the machine before the people who feed it.

Yep, and ARRL HQ gave him the names and addresses of the two available to him in his state. He *refused* to use either of them. That's what was unreasonable, and the reason he got flamed. If they'd refused to tell him who the checkers were, then he'd have a beef. But that didn't happen. Or if he'd tried the checkers and they'd screwed up his award, then he'd have a complaint. But none of that happened. He went looking for someone else, someone other than who he was *told* to use, to get his cards checked. That was stupid. And unsurprisingly, he didn't get his award. Suppose he held the winning lottery ticket, but *refused* to show it to the state lottery officials like it says on the ticket he has to do, and instead insisted on showing it to Joe state senator who lives down the street and who couldn't tell a valid lottery ticket from a boxtop. Would you be amazed if he didn't get the check from the lottery board? Following the rules is part of the game.

> Don't cheapen it by trying to find an easy way to receive
> acknowledgement of it.

Although I agree with the above sentiment, i.e., be part of the
solution instead of the problem, but there is also an issue
of improperly set expectations. Speaking from experience, the
impression I had of VUCC and DXCC was that working the
grids or countries was the difficult part. In fact, what I'm
finding (as many others have now told me) that the paper
work involved is much more challenging. Just getting the
confirmations can be a pretty difficult task. The actual checking
is pretty simple by comparison, but the expectation is that the
awards measure your ability to communicate with distant
locations, when in fact it measures your ability to receive
QSL cards.

If the various awards group would do a better job educating and
setting expectations, then some of these kinds of complaints
would decrease. Also if better QSLing practices were encouraged,
the whole process would be much easier and more accurately
measure what most naive chasers expect them to measure.

A question for the original poster. Why is having trouble getting
your cards checked a reason to *not* be an ARRL member?
I could see not being a member if you don't ascribe to the ARRL's
philosophy or if you really believe it is an ill run organization not
worthy of your contribution in dues. But to blast a bunch of volunteers
and suggest not being a member accomplishes what?

Your assumption is incorrect. Check your callsign server; you will see that I have a Tech-PLUS license. Again, I passed my 5WPM. I know the code. But I do not believe that the knowledge of Morse should be a required testing element for obtaining an amateur license with HF privileges in 1995.

"mail sometimes bounces here, please resend if needed!"

I disagree about multiple choice testing.
It is NOT a forgone conclusion that we "must" use it.
There are plenty of large nations on this planet that have
never used it, and they get along fine. "Multiple guess"
is an American invention that DOES save time, but reduces the true
evaluation of someone's knowledge and ability.

What we should have is ESSAY type questions on the amateur tests.
THEN we would find out of anyone has memorized and understood
anything USEFUL!

Just my 2 cents from AF4K. 73

From: ssampson@icon.net
Message-ID: <ssampson.63.001152C6@icon.net>
Source record: 238067

I am doing some research on magazine publishing. One of the most common descriptions of what a good Ham magazine is, was the contents of the now defunct Ham Radio magazine. Some of the bad things I've heard about current Ham magazines, is that they are too light technically, and oriented to the operator or begining electronics person. The other major complaint is that the subscriptions are too expensive. Would $ 2.95 U.S. $3.95 Canadian, or $25.00 annually, be too expensive (1995 dollars)?

I would like to hear what you would want to see in a Ham magazine. To this end, if you could include a table of contents of your interests. Example:

Four Color Covers
Color Advertisements
Black/White Articles
Publisher's Forum (1 Page) (Positive Thinking)
Editor's Forum (1 Page) (non-confrontational)
Guest Speaker Forum (1 Page) (Ham Radio, not Politics)
General Letters (1 Page) (Meat, not backslapping thanks)
Technical Letters (1 Page) (Meaty debate, rebuttal, alternatives)
Feature Articles (xx Pages) (No J poles, No Pentodes, no Cobol)
World Wide Web, Other listings (Information repository point-outs)

Finally, would advertisements from traditional home product companies be seen as a negative impact. For example: Campbell Soup, Colgate-Palmolive, Mitsubishi, Ford, Chrysler, etc...

Send replies to:

ssampson@icon.net

Thanks for your comments,

Steve Sampson

>it.

It's not entirely crazy. I too know someone who claims to be able to decode RTTY by ear. In fact even I, who has to be one of the world's worst manual Morse operators to ever pass a code speed test, can decode some common RTTY sequences by ear. I think most every RTTY operator recognizes RYRYRY, and I've found I recognize my own call sign, CQ, NNNN, and a few other things. But I've got to say it does sound a little crazy to then design a Morse to RTTY translator to be able to reply when it's lots easier and better to just design a TU. But then most people think *all* hams are a bit crazy anyway.

>For all those anti-code-pro-digital-modes-guys, who now want to start a new
>thread like -stupid-wetware-mode-high-speed-daemons-that-are-really-crazy:
>behold, the guy actually is one of the inventors and developpers of PACTOR.
>So, who says a high speed CW-daemon cannot contribute to the art of digital
>modes??

But can he copy PACTOR by ear, and do the FEC in his head? Perhaps he can, but most people can't, which is no doubt why he developed a machine. There are people with all sorts of freakish talents. I once met a lightning calculator. He could do basic four function arithmetic on long strings of numbers as fast as you could read them to him. But he was lost with trig identities and logs, or even simple algebraic manipulation. He freely admitted that, however, and didn't try to claim his lightning calculator skill was a substitute for real mathematical knowledge.

I frankly don't care if people like to manually play modem, if that's fun for them, fine. I only jump on those who try to claim that talent is a substitute for real knowledge of signaling theory, or claim that OOK Morse is the sine qua non of signaling methods, and insist that everyone else demonstrate they can do it too before being allowed to use better methods.

Actually, the latest batch arrived just after 3PM PDT (UTC-7) on the 15th.

The Internet link from Easter has been painful at the best of times. Network throughput (end-to-end) is on the order of a couple of hundred baud. Imagine reading email and transferring files over AMTOR and you will have an idea of what they have had to contend with.

They have logged in to the system since the 15th (latest login was on the 19th). It may be that they have decided to collect all the rest of the logs together and clean them up before uploading it all in one batch. This is *pure* speculation on my part, however.

I will add something to the search page saying how current the log info is.

My name is Scott Glasrud, and I am running for the New Mexico State Senate during the 1996 elections. One of the reasons I have chosen to run is to combat the proposed state and federal regulations of the Internet. As you know, the Internet was never designed to be regulated! It was designed to allow communications in the event of anuclear war or a major catastrophe. I OPPOSE REGULATION, and if elected will fight to preserve your constitutional rights. HOWEVER, I NEED YOUR HELP!

I am asking each person who reeives this message to send $5.00 to the Scott Glasrud Campaign Committee. If we pull together, we CAN protect our first amendment rights! HELP ME show the politicians the POWER behind this important NETWORK. Please send contributions to:

The Scott Glasrud Campaign Committee
11024 Montgomery Blvd. NE, Suite 179
Albuquerque, New Mexico 87111

Thank you!

Looks like "YE OLDE FAHRTZ" are up in arms in the UK! <g>

(Here in the states, they're too busy protesting the proposed Medicare
cuts, so we've got a good chance at dumping the code requirements.)

Hi and thanks for reading this.
Name here is Kevin.
The problem I'm having is I have a Kan-3 Kagold ver.9.06 Yeasu 736R on a Comet cx-333 Tri Band Ant. When I am running packet I get no Data sent out...Just a dead carrier! I've tried adjusting mike gain etc... It used to work great and now nothing. I've also used the same ant-TNC Computer and software with my HT and it works fine. Any suggestions appr. since I'm about at wits end on this one.

G>I have been beta testing with one for a couple of days. Last nite also got a
G>hold of the AT-180 antenna tuner, it is the same size as the
radio.
```

You've got one? I have a couple questions for ya if you don't mind..
What are the F-1,F-2 and F-3 buttons for? I assume they can be
programmed for something. Also, how do you change from one band to
another? Do you have to go into the menu and select the band, filters
power etc.? That sounds like it might be a bit of a pain if your
mobile.

Actually, 3.5 mhz is not impossible, since 3.5-3.8 is shared usage in other countries, and I could see the FCC giving permission to a company to use those frequencies to develop products, etc. for export. It's also not impossible that what buch saw was mHz, but the license, or whatever says GHz. I know of at least one other typo in FCC records.

For one thing its been a tradition that will not be broken in the near
future. Second of all the ITU says you need to know International
Morse Code to operate HF. And third if you don't want to learn code
get on VHF or don't get a license.

5264. : Drop Code? RA tried in the UK

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-23 00:00:00 UTC
From: geertj@ripe.net
Message-ID: <DFC4Kt.AKG@inter.NL.net>
Source record: 238116

The RadCom issue I received today (RadCom is by the RSGB, United Kingdom),
included a leafled describing the RSGB protesting in public against
the RA (equivalent of FCC) proposing to do away with morse code testing.

The chair of the RSGB was violently against that and protested in no
uncertain words. While I am not an UK ham, I am an RSGB member and
the chair can expect a very explicit message from me, as I think
that the RA did the right thing.

Doing away with the morse test is not the same as abandoning morse.
Please don't require me to master pre-WW1 techniques if they are
inefficient and obsolete. Just as I let others use morse, let
me do my experiments, OK?

: and keyer, so the sending speed is no problem..

: Do you have any ideas on how I could speed myself up on the air?

: Thanks es best 73's N0ZYA

9-10 WPM is a pretty typical wall people run into. Generally it is
the upper limit that anyone can copy by consciously "translating" Morse
into letters.

You reach the next level of Morse proficiency when you eliminate this
conscious translation. To your mind, the sound *is* the letter. It
is a bit like touch-typing...you don't think about where the letter is
on the keyboard, your finger just reflexively goes there.

There may be some tricks, for instance using the "Farnsworth" method
of listening to "fast" letters sent with long inter-letter spaces, but
the best way (IMO) is to operate...alot. Repetition is the best
method.

Also (in my opinion) Morse is fairly tedious work below the 9-10 WPM
threshold and doesn't really become fun until you can eliminate the
translation step...it's a completely different experience.

Eventually you'll actually begin copying (hearing) common letter
combinations and words. That's the ultimate. But it takes time.

Greg

Excellent advice as usual, Shawn. I'd add one more thing. You won't
lose much to depreciation by buying used. When you get ready to sell,
you'll get almost all your money back. That certainly isn't true when
buying new. You pay dearly in initial depreciation for that pristine
cardboard box.

And a final thought. Newer isn't necessarily better. There are few
HTs out there that can match the old 2AT's performance as a *radio*.
It's not a scanner, and it's not a Gameboy, but it is a good two
way radio. The only serious lack it has is no CTCSS. If two meter
machines in your area require CTCSS for access (fairly unusual in
most areas), look elsewhere for a radio. (You can fit a CTCSS encoder,
but you'll be stuck opening the rig to change the tone, and that can
be a pain if you use several machines that each have a different
access tone.)

Hi Alf, The rigs are available in JA, and I saw them
in Hong Kong(VS6) and Singapore (9V1) a couple weeks
ago during a business trip. I imagine they should be
stateside really soon. Heard one on the air on 18
Mhz about a month ago--sounded good but the OM
complained that the 2M output wasnt enough for him (in
JA 2M is only simplex, so ya need more pwr than 10
watts out usually).

Thanks everybody for your advice. I did go ahead and get the radio shack mic though. So far it has not broken (had it a day) and people have told me that it sounds good. The sound quality on my end on the speaker seems okay. I just wish it was slightly smaller. Oh well I will keep it for awhile. Maybe eventually I will get the MFJ or the Yaesu one that goes with my FT-530. But for the time, place, and price it seemed the best for me.

Thanks again everybody,

John

This may sound crazy to you, but it is not entirely off topic:

I actually know a ham, who decoded RTTY by ear. He is one of the best CW-operators I know and he started to listen to RTTY signals and realizing that he could hear the difference between the respective letters, so he started learning all of them. He then designed a device that turned his keyed CW into RTTY transmissions and actually made a couple of QSOs with it.

For all those anti-code-pro-digital-modes-guys, who now want to start a new thread like -stupid-wetware-mode-high-speed-daemons-that-are-really-crazy: behold, the guy actually is one of the inventors and developpers of PACTOR. So, who says a high speed CW-daemon cannot contribute to the art of digital modes??

Source record: 238125

I just started making my own QSL cards and have been looking for
some graphics to add and can't seem to find much of anything on the
internet.
I have several ham radio cd's and they are of no help.Are there any sites
out there or any cd's that have the graphics?
The formats I can use are .wpg,.bmp or .pcx. Other hams have also been
looking to no avail any pointers would be great.
I think it would be great to find graphics of
rigs,antennas,satellites,logos,TNC's ect.

Thanks

I got mine back from repair yesterday and they fixed it for me.
I have never had the trouble have described either. Mine always
took the command on the first try. It just didn't know what
memory channel it was on. The freq. was always right though.

Their service has been exceptional to me. I sent my radio out
on monday and got it back on friday. That's pretty darn quick.

It is disappointing to pay 600 for a rig and have it quit the
first week though. You have to admit.

Thanks for the reply.

: KF4DDM

Drew, when are you going to say something on this topic that demonstrates that you have given it any thought at all? "Ye Olde Fahrtz" wasn't funny (or accurate) when you first started using it, and it's getting real old now. I have nothing against new hams, but it strikes me as amazing that someone licensed since 6 September 1995 can muster the arrogance to make such posts.

Learn from people like Gary. He's thought about the "Code" topic for some time and has formed his opinions based upon experience and reason. And that's what he posts. Others (most certainly) may not agree with his conclusions, but respect his argument (well, sort of.) Except for the "brain damage" comments (and that was a joke, right?), he's never had to resort to the type of drivel you've posted above.

Some of the people who support Morse *are* old and don't know anything about computers. But many are young technical wizards who know a darn site more about computers (and Amateur Radio) than you do. Characterizing all Morse folks as "olde fahrtz" (a group for whom you obvioulsy have no respect) is just a convenient way for you to avoid the effort required to form a well-reasoned opinion.

I know this is not directly an amateur radio issue but maybe someone
can help. I'm looking for manufactures of General Mobile Radio Service
equipment. I know Radio Shack sells an HT (I have two of them).
What I'm looking for are other manufactures that offer a wider array of
items. Does anyone produce a catalog? Any info on manufactures or
outlets and how to contact them would be appreciated.

Thanks people,

: even though I have no intention of EVER using it:

: 1. It is a screening process of hams to make sure that I am serious about the
: hobby (I equate this to hazing).

Is learning the theory a screening process? Some people learn code
easier than the theory I imagine. Some people seem to be able to learn it
pretty quick. Kids pick it up very quickly.

: 2. It is a way for hams to artificially increase interest and/or traffic in CW.

Doesn't make sense. If this was the case there would be hardly any CW
on the air. Of coarse that's not the case as there's a LOT of CW on the
air.

: There is really no good reason that I must know code.

Then I guess there's no reason for you to learn digital modes either huh?
Why won't you learn the code? Only because you feel you shouldn't have
to? Lame excuse to me. It's funny, a lot of CBers bitch about having to
learn the code too. Lame excuse considering they can get a Tech license
which tells me their also probably too lazy to learn the theory too.

: out there, I WILL NOT MOVE. My family has lived in this house for 4
: generations. The problem is you men. Please help me. I can't clean up
: forever. Thank You.
:

The problem is not a simple one.

First, and most obviously, something inside "Miss Tastycakes" must be resonanting at the frequency in question. There may also be some inductive coupling involved. However, there is something un-natural about this coupling. I would suspect the phase of the signal may be inverted, otherwise the magazine rack would be mounting *Miss* Tastycakes, not visa-versa. That is an un-natural coupling if I've ever heard one.

Second, your neighbor *should* be transmitting on 2 Meters, not 2 Yards. He is obviously operating out of band. And studies have shown that biological organisms resonate more readily with English Unit RF than with Metric RF.

You might try one or more filtering techniques. Start by connecting a few capacitors between Miss Tastycakes' legs. Then try using your curling iron to shape her tail into a coil (notice that pigs never resonate at 2 Yards.) As a last resort you could try using a coffee filter...it won't stop the behavior, but it may give you less to clean up.

If you don't have any luck finding answers here, try the Amateur Radio groups on FIDO Net.

(Thanks for the post! :-))

Most of the responses seem to dismiss the possibility that the dog is
affected by the RF. I have to shut my cat out of the radio room to keep
her from putting her paws, claws out, on my thigh when I am transmitting.
She never does this when I am sitting in the same place, as I am now,
communicating by telephone line.
Do others have anything to contribute on the possible RF sensitivity
of small animals? Most of my operation is on 40 meter phone or cw.

From: mlazaroff@delphi.com
Message-ID: <xbPBeqs.mlazaroff@delphi.com>
Source record: 237942

This was in one of the local club newsletters. I don't know who wrote it originally, but I know I certainly can relate to most of these, and I thought you would enjoy them also.

You know you are a Ham when:

The only time you get up at 6AM is for a hamfest.
You know you can run all your home appliances on your personal back-up power.
You have breakfast with a guy in England every morning.
Your ARES/RACES/MARS bags are always packed.
The cute girl with the "KISS" T-shirt asks you what bands you like and you
answer two and twenty meters.
You live in a shack.
A clerk asks you to spell your name and you do so phonetically.
In a conversation, you wait for the courtesy tone before speaking.
You hear a scraping sound when driving thru the fast-food restaurant window
lane.
A band opening is more important than a grand opening.
Sight-seeing amounts to looking at rooftops for antennas.

Have any suggestions for additions to the list?

73, Mike KB3RG

In one sense I have a little trouble feeling sorry for the guy who got the runaround on his VHF grid square award. We do not have, and have never had, a local card checker where I live. All of the ARRL awards I have, which include WAS, WAC, DXCC and 5-band DXCC, were gotten by sending my cards directly to Newington to be checked. No other option existed for me. It's not that big a deal, just pack them up good, send them UPS or CERTIFIED US mail (with receipt requested and insured for an amount sufficient to pay postage expenses for getting new cards if they get lost), and mail them off. The postage never cost more than about $5 except for the 5-band DXCC package (which had 600 cards in it). None of them have ever gotten lost and they've always arrived back in good condition.

Granted he did get a runaround, which should not have happened, but he had other options (this one and 2 out-of-town checkers) which he did not avail himself of.

meyer,

What do you mean with problems. What kind of problems ? The radios were not even produced until August 1995. They have been in europe for about 3 weeks. If you care to e-mail 75540.525@compuserve.com. I am sure ICOM would like to know about the " supposed problems that have been occuring for many months know. "

Just for your reference, The Icom IC-706 HF/VHF Transceiver is available
here in New Zealand (South Pacific Ocean...Just in case you wondered!!)
at the moment.
What a cute toy!
Price: NZ$2416.00
Currency Conversion Factor= NZ Dollar = US .62 cents.
Its cheaper for you to wait considering the conversion factor
Cheers.

: >: on an automobile. In fact, the world works in just the opposite way.
: >
: >Well, one can take any example to the extreme, but, yes, I do think
: >that one should be able to prove that they know how to add and subtract
: >before they should be allowed to buy a calculator. I also refused to
: >allow my daughter to buy a pair of velcro shoes until she showed me that
: >she could in fact tie shoes first.

: My example was deliberately extreme in order to form a reducto absurdium.
: I could give countless others.

Do you mean that since the extreme example is silly that the entire
point is silly ? I could have just as easily said that since guns
kill, only the govt should have access to them, but we all know
how far that would get. I could also have said that since too
many teenagers are killed in auto crashes that no teenagers should
be allowed to drive, but that would get just as far. Reducto absurduim
only works when the original statement is already reduced.

I see countless examples of 'cashiers' that can't figure out change.
Most of them would be lost if the computer didn't tell them how
much change to give. Even then, they have to stop and think about
quarters and dimes. Go into a local grocery store and hand them
a silver dollar, or better yet, a half dollar. I've had them
argue with me that they won't accept *foreign* currency.

The original example stated that people must know the some of the
basics before they can advance. The FCC (and/or ITU) obviously has
some interest in seeing to it that operators can operate. A test
in operation skills IMHO, is called for. Morse was a great choice
at that time. Today, yes there are better ways to communicate.

: For example, I suppose your philosophy
: wouldn't let anyone turn up a thermostat before they'd learned to rub

: two sticks together to make fire. It's the same thing. Skills with
: primitive techniques become unnecessary when they are supplanted by
: better methods. That doesn't mean that people shouldn't be taught that
: friction generates heat, it just means that they no longer need to
: demonstrate a practical mastery of the primitive art before warming
: themselves a better way.

So, in the interest of an operations test, what method do you think
would suffice ?

: >: The highest levels of technology are usable without demonstrating
: >: competency with functionally identical but more primitive levels of
: >: technology. For example, to code this reply to you I don't have to
: >: work in primitive 1s and 0s, I have a keyboard encoder IC that deals
: >: with such low level codes for me, and it does a better, faster, and
: >: more accurate job of it than I could do manually. Now somewhere
: >: there may be someone at a primitive computer console reading the
: >: ASCII off of a row of front panel lamps and encoding his reply via

: >I do agree completely, but like the scientist said in the movie
: >Jurrasic Park (to paraphrase), "You're standing on the shoulders of
: >giants, but you have no respect for the technology that got you there"

: Ah, yes, the anti-technology argument, found most often in bad 1950s
: ScFi movies about atomic bomb mutated monsters, but now updated by
: Spielberg to use the new boogeyman, genetic engineering. The funny
: thing is, giant ants and 50 foot tall women never did come crawling
: out of atomic test sites, and it's unlikely the new boogeyman will
: present any either. When Godzilla trashes Tokyo for *real*, I'll take
: this line seriously. Meanwhile, the Jeremy Rifkins of the world can
: continue to make a buck by frightening the technically illiterate
: about mutated tomatoes stalking Omaha.

I didn't think of this as anti-technology. I thougt of it in the text
that it was stated. It is only through the understanding of how you
got where you are that you can figure out where you are going.

: >I don't mean that you, Gary, (or anyone else for that matter) shows no
: >respect for technology, that is not my point at all.

: I hope not. I have a very great respect, and affinity for, technology,
: the higher the technology the better. However, primitive technique is
: only of historical interest, and not something I'll waste much time
: developing practical skill in applying when there are better methods
: readily available.

: >My point is that before I can understand how digital communications work,
: >I have to know how ASCII is encoded. Before I can design and build a

: >tnc, I have to know how Ascii is stored. Before I can store Ascii, I
: >need to know .... (and so on, and so on) IMHO, if you want to stay where
: >you are today, then, by all means, go ahead and use the highest level
: >of technology to it's fullest advantage without understanding the
: >underlying principles first. But if you want to advance even further
: >than you are today, someone is going to need to know how to make it
: >work even better. And that person is going to know the underlying
: >principles, they will understand why things work the way they do, and
: >they will have the insight to make it work even better.

: I'm a firm believer in understanding principles, but that's a
: *completely* different thing from being adept at *practicing*
: primitive technique. I could stalk my lunch in loincloth,
: carrying only a spear, but I prefer to use a rifle with a
: nice telescopic sight while wearing my Goretex camos. That
: doesn't mean I don't understand the principle of stabbing
: and cutting, just that I don't practice it when there are
: better ways.

So you *do* see some value in practicing methods that are not
state-of-the-art. Why do you need to go into the woods at all
for food ? Certainly you could acquire your lunch through
other means. (I also enjoy hunting by the way :-))

; I don't have to recreate the experiments that
: led to Faraday's law in order to use the results in practical
: work. And I don't have to hand code ASCII quickly in order
: to understand what ASCII is about.

True. Internet is a wonderfull thing, but I will never be a part
of making it better (short of not using it :)), because I have
no clue how it is put together. Yes, I can use it, but how and
why it works is outside of my experience. I will never be chosen
to work on a team to help make internet better. Why ? Because
I lack the basic understanding. However, where I work, I was
chosen from many to be a supervisor of a group. Why ?, Because
I demonstrated an understanding of the basics, and how to get
things done.

: >Morse may or may not teach us underlying principles, but I think that
: >they give me at least, a deeper understanding of radio in general.

: Indeed, Morse serves little purpose in teaching radio principles,
: other than to serve as a bad example of encoding design for decoding
: on a noisy channel.

In your opinion, granted. Not in mine. It wasn't through the study of
dots and dashes, but the adaptation of saying things
like CUL, QTH, RST 469, that I learned to adapt my language to
communicate with others who used the same language, (even if it is
a LCD), I gained an appreciation for radio that I do not think
I would have had without the experince, IMHO.

; It seems, in fact, that Morse has led many astray
: as to the real underlying principles of encoding intelligence on an RF
: signal. Only a short while ago, we had an Extra claiming OOK was not
: modulation. And we keep seeing the misconception that OOK Morse gets
: through when nothing else will, and that Morse is language.
: The messenger has been confused with the message. In fact,
: OOK is modulation, a form of AM, though not the best one for
: getting through in harsh conditons. And Morse is an alphabetic
: encoding, though again not the most efficient one for low error
: rate decoding on a noisy channel. That's hardly surprising,
: however.

Please don't attribute someone else's mistakes to me. I make
plenty of mistakes that I can call my own. My point lies no
where in these exchanges.

: Like rubbing two sticks together to make fire, primitive
: methods are rarely the best methods. Even the mountain men carried
: flint and steel rather than a bow drill to light their evening
: campfires. Today we have matches, or a BIC lighter, though more
: likely we've got a piezo ignited gas grill in our RV. That doesn't
: mean we no longer understand that fire is hot.

I also never claimed that morse was best. I have already stated
the opposite. My point lies in the fact that it *is* a basic form.
But, most anti-coders overlook any and all advantage for the simple
statement that they will not use it, it is outdated, why should they
be tested for it ? I *did* claim that it did something for me.
It continues to something for a lot of people.

On October 6th thru 8th, 1995 at Costerisan Lake, Bakersfield, Ca will once again host the southern San Joaquin Valley's largest Amateur Radio event of the year. Known as the Second Annual National Hamfest, it is expected to bring Amateur Radio Operators, also known as (Hams) from all over the 14 western states, including some foreign countries. FAOR Fun in the sun in Bakersfield,Ca area at Costerisan Lake, just a few miles south of the city.
Amateur Radio Equipment manufactures from far and wide will be displaying the very latest technological advances in the Amateur Radio industry Names like Icom, Palomar Engineers, R.F. Tech. Radio Shack, Ramsey, Titan Communications, Starfire Tech, Computer Nut, and Madera Amateur Radio, just to name a few.
Plenty of space for one thousand RVS, with security on the campground all weekend. with free daytime parking for all other vehicles.
A number of Workshops will be available like Amateur Television.

There will be something for the entire family, including non-hams. Such as arts and craft booths, food booths, entertainment , plus a qualified license technicians will be on hand to offer you advice or get that item back online.
Amateur Radio Operators (Hams) are a world wide fraternity of people from all walks of life. Ready to provide a first line of communications in times of natural disasters such as Earthquakes, Hurricanes and floods. and the recent un-natural disaster of the bombing in Oklahoma City.
Everyone is cordially invited to attend this yearly event. come one come all.
For further inforamtion contact Al Chadwick N6THC at 805-396-1012 or call or e-mail myself Robert Gerner Jr. KB6JFL at 805-588-7065.

You are welcome to use this as a press release. Thankyou

Tom
read your msg on putting these older radios back in service on the ham bands. My son and I bought some Motorola Mitreks and are converting them. These were a matter of recrystaling and replacing one cap and rewinding a small coil. All this is done in the frequency elements and then retuning the radio. I have had good luck with the first one (just finished it).

I would like info on the conversion of a 450 Mhz MICOR.

Let's discuss

Howdi,

I got one (three actually) of those 5-channel 49MHz WTs
from Radio Shack (stock number 21-402).

I had an idea to convert one to six meters. Opened it
up....started in on the schematic... hmmmmm...

There's only ONE crystal in the whole box!

One crystal @ 10.24MHz is divided down to set the PLL
reference (5kHz, steps of 3 by logic), is also used as the 2nd
LO (10.695 MHz - 10.24 MHz = 455 kHz), one side of the PLL (xmit?)
is doubled before use, the R and T frequencies are looked-up by the
logic to account for the 1st LO offset and strange doubling, etc...

In other words, you can't just swap the one and only xtal
in this unit because then all these ingenious frequencies will get
all askew. Your T and R won't line up any more, the 2nd LO will be
off, the channel spacing will be wonky, etc...

I'm not saying that it's impossible, but it's gonna be messy
to convert this particular 49MHz WT to six meters!

Have fun!

You might possibly have a marginal (slightly corroded) connection
on one or more AC Switches or outlets. Turning them on or off may
be breaking the corrosion for a while...the corroded contacts could
be causing some sort of rectification which could in turn cause the
interference..

I know of someone a few years back who had this problem in a junction
box in his attic..he had aluminum wiring..It can also happen of
course with copper..

If you only need receive only, and don't need extremely high sensitivity, old tone and voice pagers like the Motorola "Minitor" or "Pageboy" (I think those are the right model names) may serve your purposes. They are quite solidly built, can be retuned to the 151 MHz band, and only cost a few dollars each as surplus. By holding the button down, they will receive FM voice constantly. However, they are single channel and have no squelch (other than by paging tones). Also, I don't think these will allow you to re-use the crystals from the Radio Shack units (different IF frequency).

5312. Teaching code to a child

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-24 00:00:00 UTC
From: krisn3rqt@aol.com
Message-ID: <443go5$j6p@newsbf02.news.aol.com>
Source record: 238005

This morning my 6 year old daughter came into the shack and asked, "Dad, would you please teach me Morse code?"

What is the best way to approach this? I know not to teach her the way I learned - memorizing dots and dashes for each character. This is like golf. Learn it correctly from the beginning.

Should she learn all the characters by sound first, before doing any sending? Is starting off with a paddle/keyer okay?

Are there any courses or articles on how to *teach* morse code as opposed to how to learn it?

Thanks.

Well don't tease us, Meyer, tell us about the problems. I've been eyeing the ads thinking a 706 would fit nicely in my Jeep. But if it has problems, I'll just find a way to mount the 735 in there instead.

Would that be Hz, kHz, MHz, or GHz? It makes a rather large difference whether you need a VLF, LF, VHF, or SHF design. I'm *guessing* you mean 190.400 kHz. A TRF design might do, but an upconverter in front of a HF receiver might be the most practical approach. Is this a weak signal receiver? And what sort of modulation does the signal you're trying to receive have? Answers to those questions can make a difference in the answer as well.

>
>Greg
>

Although I believe that I fall into the latter category, being on the younger side of 30 (for 3 more weeks, anyway :-( ) and having been a computer hardware/software man for 8.5 years, I am also in favour of keeping the CW requirement. However, I would not mind if it were abolished, as long as it is replaced with something EQUALLY DIFFICULT.

I feel that simply giving an HF license to those who have passed (in the UK) the Radio Amateurs Examination, or (in the US) passed exams 2 and 3(A) WOULD BE A MISTAKE. Especially in the UK (or the rest of Region 1, for that matter) where the 80m band is 3.500-3.800 and the 40m band is 7.000-7.100 - lets face it, the HF bands are congested enough as it is!

However, I would qualify that by saying that perhaps no-code licensees could have *partial* access to the HF bands, as an *incentive* to get a FULL license.
I feel that simply GIVING a full license to some of the people I have heard on 2m repeaters would be a BIG MISTAKE, and there ought to be some sort of obstacle which is *difficult* but not impossible to someone who is prepared to sit down and EARN (i.e. WORK) the extra privileges. At the moment, the CW test does this very well indeed. It took me 3 weeks hard work to get to the 12wpm required for a UK Class A license (although I had been listening on the bands and knew the basic alphabet before I started). I know it's been said before, but if I can do it in three weeks, anyone can do it. It just takes PERSEVERANCE.

Just my 2 pence worth (or is that 3 cents?)

>
>Are there any courses or articles on how to *teach* morse code as opposed
>to how to learn it?

I may not like to use Code, but since I had a devil of a time learning
it I later did some research on learning techniques, so I'll offer some
tips that have helped others. First, you're absolutely right that you don't
want to teach dots and dashes. Teach the *sound* of each letter instead.
Each letter sounds different as a unit. You want to learn it that way.

Instead of starting out with ETAIONS as is usually recomended, I suggest
you start out with letter pairs that are sound opposites, IE A and N,
G and W, K and R, Q and Y, L and F, etc. Listen to the pairs and try to
tell them apart by their *sound*. Then work on the bit inverses, E and T,
I and M, S and O, etc. Finally, learn the orphans. By learning the antipodal
pairs this way, they become well separated in the "signal spaces" your brain
will set up for pattern matching and you'll have less confusion later. This
antipodal concept is based on information theory and cognitive theory and
has been shown to be very effective.

The downside to this method is that it is *boring*, and you won't
quickly be able to spell out simple words to hold the child's interest.
It may be worthwhile to teach the letters in the child's name first,
just so she will have something "neat" to show off to her friends
right away. But learning the pair sounds works better in the long
run. You can try to make a game of it to lessen the tedium. After
she's learned several pairs, ocasionally throw in a surprise letter
instead of the expected pair opposite. This is guaranteed to delight
her when she catches you at it.

Now obviously, the letters sound different at different speeds.
It's better to learn the letter sounds at a higher rather than
a lower speed. The Farnsworth method may have some value here,
but tighten up the letter spacing as quickly as you can because
you don't want to *think* about what you hear. Instead you want

the recognition be become reflex, and thinking about the sound interferes with that.

Learning to send isn't important at all at first, and may actually impair learning the letters as sounds. That's because sending is mechanical, and naturally forces you to think about the individual dots and dashes. That's exactly the *wrong* thing to be thinking about while you're still learning the letter sounds. Keep the victim, I mean student, *away* from the key at first.

This is also *boring* to a kid who wants to "make the noises" right away. So you may need to modify this a bit and allow her to practice sending letters she's learned to hear well after each drill session. This is just for *fun* though, so don't try to correct her sending at this point. That'll get her thinking too much about the dots and dashes, and you don't want that.

After she's receiving the entire alphabet well at a good speed, *then* let her start concentrating on good sending. The goal is to make the same sounds with the key that she already knows as letters. That will be very natural to her at this point, and sending speed will rise very quickly.

A child's attention span is short, so don't make the drill sessions long. Ten minutes a day is plenty unless she *demands* more. But do make the practice sessions *regular*, don't let her slack off and skip days frequently. The conditioning required to learn Code is much the same as training a dog. You have to be consistent and regular in your training sessions, and you need to reinforce good behavior and not reinforce poor behavior. Don't scold, and if she gets really frustrated, stop for the day. Always let her play with the radios after a practice session if she wants. That's her reward for a good job on the practice session.

Scott Babb (sbabb@k2.sanders.lockheed.com) wrote:

: If I understand correctly, your argument here is that CW is necessary
: for emergency communications. I submit that in an emergency, the
: faster you can move emergency messages, the better.

(Valid speed and accuracy comparisons deleted)

: An HF AMTOR system runs at 300 baud. (Etc.)

: An HF packet radio system also runs at 300 baud. (Etc.)

: A VHF packet radio system running at 1200 baud, (Etc.)

: This data would tend to point in the direction of using a packet radio
: system for emergency data communication. When you consider the large
: influx of no-code licensees into the Amateur Radio Service, it becomes
: even more important *not* to rely on CW for emergency communications.
: You need to be able to transmit in a way that your intended recipient,
: and all of the relay points in between, can understand. If a message
: originates from a CW station, it will usually be relayed via a SSB
: traffic net or a packet network. This is simply because more hams
: can communicate more efficiently in those modes.

Good points, and accurately stated, as far as it goes...but a few
additional observations:

I've polled several of our local hams. It seems that the percentage
of them who operate packet (or other digital modes) is quite low.
Among those who operate digital modes, the majority do not operate HF
digital. Among the Technician licensees, the vast majority operate
only 2 Meter FM, mostly repeaters, not digital modes. Among those
who have an interest in packet, most say they can't afford the
equipment right now.

: A demonstrated proficiency in CW is required by the ITU for access to
: the MF and HF amateur bands. This proficiency requirement would be met
: by a 5 WPM test for all classes of amateur license with MF/HF privs.

"Proficiency" does not exist below the "wall" of 8-10 wpm.
Translating dits and dahs does not equate to proficiency anymore than
spelling words letter-by-letter equates to proficiency in voice modes.

We are talking about HF access here, and it is a fact that hams in
many other countries in the world rely on Morse far more than US hams
do, and generally have much less access to modern digital equipment
than we do.

For local emergency work, VHF FM is the mode of choice.
And it may be accurate to state that, in most cases, a well organized emergency communications net using digital coms would be much more efficient and useful than the same using Morse. As you stated above: "You need to be able to transmit in a way that your intended recipient, and all the relay points in between, can understand." Any "hardcopy" mode would be better in this regard than a voice mode, and if HF packet was in more widespread use worldwide than Morse, it would certainly be superior. But right, now it isn't. Morse is still an important fall-back emergency communications mode. It may not be for ever, but it is right now.

Greg

My guess would be 190.4 MHz. Although this is in the TV band, there are a
few channels squeezed in there for the links from professional wireless
microphones to the PA system. I'm not sure what FCC regulations they
operate under, but I have seen wireless microphones operating in the
170-200 MHz range. The modulation is FM, probably wideband. If that's the
case, modifying the front-end of a simple (dial-tuned) commercial FM
reciever might be the simplest way to build a receiver. Assuming it only
needs to tune over a small range (if at all), replacing the oscillator and
RF coils may be all that's required, without needing to pay attention to
LO/RF tuning tracking. Professional units usually use diversity (two
seperate antennas and receivers and logic to select the one with the best
signal) to reduce signal nulls.

>
>-Mike KD4QDM

The Minitors do have a squelch in them. It's controlled by an internal pot and can be set to either "page mode" or monitor mode. In monitor mode you can listen like a normal receive with the "button" on top acting as a squelch bar so that you can open the squelch by holding it down. These will work with crystal from JAN or BOMAR or the other usual sources but I doubt the radio shack crystal will work. And they can be found cheaply and do use rechargeable nicads that have almost a 40 hr life span between charges.

Hi all,
I need some information... Anyone here could suggest me a good
software for creating and managing an amateur-radio station logbook?
The software should preferrably run under ms-windows 3.1 and should be
shareware or even better freeware...
I appreciate suggestions on where i can find such a software, or
better if you would be so kind to post it here or to send it to my
e-mail address... :-)
Bye all,

Hi,

I've started to compile a "List of Stamp Application" (L.O.S.A for short). I think there are lots of *GREAT* ideas and problems solved with the BASIC Stamp and the main purpose of this list is to read what other people are using their BASIC Stamps for and maybe get some inspiration or hints.

So if you have done something with the BASIC Stamp (small or big) that you are willing to tell others please use the form below and write a short description, nothing fancy is needed just a simple explanation. If you have source code to share thats even better but it's not necessary.

Then e-mail the form to:

cj@algonet.se

With the following as the subject:

L.O.S.A Contribution

When there are a bunch of contributions I'm going to post the L.O.S.A to this newsgroup and upload it to Parallax, Inc. FTP-site. I will update it approx. once a month.

[--- cut ---]

```
=========================================================================
- L.O.S.A Contribution Form -

Let me get this straight.....

1) No one in your city has volunteered
to be an ARRL card checker.

2) The ARRL is to blame.

3) Therefor we should not join ARRL.

I see.

>
>1) What other organization has as large a membership percentage
> wise as the league.

Perhaps the old Soviet Communist Party, but note that they don't speak as the sole voice of the Russian people any longer. A one party State isn't healthy.

Now the League does plenty of good things for amateurs, as I'm told so did the Soviet Communist Party for workers and old people. But that doesn't mean either should be the sole voice for a people. Monolithic monopolies tend to crush opposing views by appeal to authority or tradition rather than contending in a free and open debate and competition of ideas. That's not healthy at all.

If you look, the parallels between the League and the old Soviet Communist Party are rather striking. The Soviets had a mythic leader held in nearly supernatural reverence. The League has Hiram Maxim. The League also has had a figure, who I'll refrain from naming, who was a parallel to Josef Stalin. The Soviet Communists had a hand picked ruling body, the Supreme Soviet, the League has the BOD. The Soviet Communists had petty bureaucratic rules and restrictions without number, the League.... Comrades who strayed from the Party line were sent to Siberia. ARRL employees who annoyed Comrade Dave.... (What is Luck doing these days anyway?)

Now this sort of analogy can be quickly strained beyond recognition if pushed too far, but there are similarities in comparing the one party State ruled by the ARRL with the one party State of Soviet Russia. Multiple parties serve to keep each other honest by the scrutiny they place on each other, and serve to keep each other from getting lazy by offering an alternative where people can vote with their feet and their pocketbooks. It would be healthy for amateur radio if there were more than a single dominant voice.

A case could be made that what we need is for the ARRL to have multiple *internal* parties. But what we've seen

in the ARRL when internal power struggles have taken place were cults of personality similar to those formed around Soviet dictators and would be dictators. These weren't true parties, and evaporated when their leaders caught a "cold".

Subject: Re: Radio Shack Speaker-mic??

The Radio Shack 19-310 speaker-mike is a workhorse of a unit. Not pretty to look at, but it sure does the job well.

I got sick of the "mini" ("mini" = "tinny") ones I bought. My personal favourite is the Icom HM-54 - a solid handfull of a speaker-mike. But it's three times the price of the Radio Shack unit.

The best of the mid-sized I could find was Standard's.

Now, then, if someone could only whack off the proprietary plug on my Motorola VISAR speaker-mike and outfit it with "amateur" plugs, I would be forever grateful...<g>

>manuel.

Yes, indeed! I regularly average closer to 7.5 Watts on 12VDC with both
the HTX-202 and the HTX-404.

Make sure your testing method is reliable. Are you not "hitting"
repeaters well - that others are hitting with HTs? If there is a
performance problem, and your readings are correct, please return the
unit and obtain a replacement.

Burt Fisher <k1oik@ccsnet.com> wrote:

>All the old hams use senior citizens discounts and take social security.

I doubt it's true that _all_ old hams do this--there are non-US old hams. Further, an equal number of old non-hams do these things.

>When a store gives a discount it surcharges the young.

Granted.

>Every ham getting SS paid far less than he is getting thus taking
>even more from the young.

Again, this is equally true of non-hams, so what's your point?

>Is it fair for old fat white men to do this?

First, if I'm entitled to a discount (which is unilaterally offered by a retailer in most circumstances), I take it; I doubt you're much different.

Second, it's exactly as fair for "old fat white men" as it is for old {endomorphic | mesoporphic | ectomorphic} {white | hispanic | asian | black | middle-eastern | native American | etc} {men | women}.

Gee, Burt, I guess we'll have to kill everybody over age 60 or so, right? Damn, this is an idiotic argument.

1. The code can be used to communicate by any kind of binary
signal - tapping on a table, using a semaphore, a flashlight,
whistling, anything!
2. As a consequence, in radio it requires the absolute
minimum of working equipment.
Others can supply others.

[945]

Newsline report number 945 for release on Friday, September 22,
1995 to follow.

The following is a QST
======================

New Zealand will bring a request for high frequency no-code
licensing to WRC '95. Novices take to the air in Sweden and a
ham brings digital audio to the Internet. All this and more on
Newsline report number 945 coming your way right now!

(*****
NEW ZEALAND SAYS YES TO UNIVERSAL NO-CODE

New Zealand will be asking the world to do away with mandatory
Morse Code testing for ham radio licensing. This, when the
International Telecommunications Union holds its 1995 World
Radiocommunications Conference a week from now.

The revelation that New Zealand has decided to take the point
position in working toward worldwide codefree licensing comes in a
letter to the New Zealand Association of Radio Transmitters from
Mauriece Williamson. Williamson is New Zealand's Minister of
Communications and in his communique, Minister Williamson says
unequivocably that the time has come to do away with all Morse
testing for all classes of ham radio licenses, the world over. We
quote Minister Williamson:

"I am advised that the Ministry of Commerce informed your
president, Mr. Meachen, on 17 March, that after considerable
discussion and debate between interested parties, that the
specific provision of international law relating to competence in
Morse code, contained in rule number 2735 of the International
Radio Regulations, was no longer appropriate as a treaty
obligation of the Government of New Zealand."

While never mentioning the NZART's rival, ORACLE by name, Minister Williamson went on to say that his ministry agrees with the views of other New Zealand ham radio operators who support a change in International Radio regulations. As such, he and the New Zealand government support such a change as well. Again We quote Minister Williamson:

"The Ministry is firmly of the view that international radio regulation number 2736 provides the flexibility needed for administrations to take such measures as they judge necessary to verify the operational and technical qualification of any person wishing to operate an amateur radio station." "I" says Minister Williamson, "share this view."

The fact that New Zealand is on the record as favoring the worldwide abolishment of Morse testing does not mean that the code will away at this radio communications conference. Even if WRC '95 approves such a change, it only means that the nations of the world will be free to make such a move. Here in the United States, it would take senate ratification of a new telecommunications treaty follows by a normal rule making proceeding by the FCC. These changes don't come quickly with the Washington bureaucracy. Usually, they take several years.

What does this mean to ham radio? Nothing much in the short term. In the long term it does put the issue of no-code licensing for all radio amateurs in the eye of telecommunications regulators, worldwide.

(*****
HURRICANE MARILYN

Yet another severe tropical storm has caused havoc in the Caribbean. Her name is Hurricane Marilyn and she is the ninth such storm this year.

St. Croix and the rest of the U.S. Virgin Islands were no match for Hurricane Marilyn's direct hit. Islanders were still repairing damage wrought by Hurricane Louis the week before.

"There is great devastation on St. Thomas..." amateur radio operator

Once again amateur radio operators were in the thick of it. First as eye witnesses, and then as the only link to the worried outside world.
At deadline the search for victims is still on. Six were reportedly killed on hard hit St. Thomas where 80% of the homes were damaged or destroyed. According to FEMA, for 36 hours amateurs were the only way in or out.

"November Papa 2 Yankee, November Papa 2 Yankee St. Thomas looking for one way into state side for a collect call for out bound health and welfare please." amateur radio transmission

But load signals from the islands didn't guarantee anything. Often stateside stations didn't have complete names or addresses. And even when they did, some of their stateside neighbors refusing to yield to the emergency.
President Clinton's declaration of the Virgins and Puerto Rico as disaster areas opened a major airlift of food, water and supplies. Six years to the day that another hurricane named Hugo ravaged the island in September 1989.

We are following the 1995 hurricane season very closely and will bring you updates as necessary.

(*****
ACTION TAKEN AGAINST PACKET HATE

An Italian ham is taking steps to prevent any more neo-Nazi hate mail from being exported from Europe by packet radio. As reported last week, one or more hate mongers from outside the United States is circulating messages that support genocide for several ethnic minority groups.
Because of the automatic forwarding of packet radio there is really no effective way to stop these hate messages once they are in the system. But Claudio Musatti, I3NXU, of San Massimo, Italy says he is going to try.
I3NXU has developed an automatic scanning program that detects and place an automatic hold on these hate bulletins. It then generates a list that traces each back to the originating source. Claudio has already posted a list of twenty-two callsigns that have been used to initiate the worldwide packet radio ethnic hatred campaign. The list shows primarily German calls but there are a few Norwegian and French as well. Most are believed to have been pirated by the person or persons doing the hate-mail postings. A number of postings by the rightful owners of these call signs appears to corroborate this thinking.
The bulletin identifiers on these messages of hate are "help dxcc," "DX news worldwide" and "new virus." All have the same or similar racist text.

(*****
SWEDEN NOVICE

Sweden will soon have a new entry level license class on the air. SM7HCJ, reports that the first new Swedish novice licenses will be issued shortly. He says to watch out for the "SH" prefix stations on 3.5, 7, 21 and 28 MHz CW and SSB on 10 meters.
Ollie adds that a number of Swedish radio clubs will be using the special "SI" prefix until November 30th to celebrate 100 years of radio. Also to begin looking for the special event station 7S6SAQ to become active to commemorate the 70 years of operation of the Grimeton Radio Station. The frequencies and dates of this events were not supplied.

(*****
FUND ADMINISTRATORS REPORT

It's been a month since we had the support fund administrators report. Here is the Report for August.

We heard from a number of you in August. Chuck Martin-KD6NUJ, from Greenville, NC kicks it off. Followed by the Sumpter Amateur Radio Association of Sumpter, SC. Then there is Doug Hamilton-KD1UJ of Sudbury, MA, Sid Seigel-KB2GEK of Brooklyn, and a special hello to 14 year old Mitchell Berger-N2YIC of Staten Island. Way to go Mitchell!
Continuing to the Great Lakes Region we heard from Jason Reighard-KB8SFC in Toronto, OH, The Redding Radio Club of Redding, PA, The Independent Repeater Association of Byron Center, MI, and the Echo Repeater Association of Mt. Prospect, IL. From the state where I spent my college years in Bloomington, IN, learning the radio craft at station WIUS. We heard from the Indianapolis Amateur Radio Association, Duncan McArthee-N9NBI of Oden, Bill Elliott-W9ZSK, and the Morgan County Repeater Association of□ Barnsville, and Michael Sirsir-WA9FTO from Brownsberg, IN. The Knoxville Tennessee Repeater Group records Newsline each week on the harddisk at the repeater site, WA4TEM available then by their repeater users. The state of the art Skywarn System of the Clinton Arkansas Amateur Radio Club and the North Arkansas Group both corresponded.
From the same area we also heard from Al Gambill, Jr.-KD4PYQ of Union, KY.
Moving to the heartland we heard from the PHD Amateur Radio Association of Liberty, MO, John Bandy-W0UT of Witchta, Brasos Valley Amateur Radio Club of Missouri City, TX, the Enid OK Amateur Radio Club, and an anonymous respondent from Oklahoma City. The West Valley Amateur Radio Club of Sun City, AZ corresponded as well as one of our regulars, Col. John Bash-KG7HL of Tucson. And we heard from the Colorado Repeater Association. What a bunch of frequencies.
From the Golden State we heard from Gibraltar Repeater Association of Goleta, our friends at the Antelope Valley Amateur Radio Club in Lancaster, Louis Maynard-WA6MYF of La Cresenta, Bill Hacker-WB6MGT of Altadena, Susanna Ball-KE6DBC of Culver City, Harold Hackman-KE6TVO of Fountain Valley, Dale Bredon-KC6WZI of Ocean Side, Bruce Johnson-NK6C of Oakdale, Jack Halum and the KA6DLX Repeater Association of Corona, Robert Briggs and the other members of the TRW Net, and Robert Squire-N6APB of San Diego. Finally from our own Frosty Oden's-N6ENV Repeater Group comes David Bartholomew-WB6WKB, Calvin Clement-KE6HLL, Bill Holliday, Jr.-WB6EDE Diane and Richard Adams-KD6ODU, Cara Thomas-KD6NOC, and Bill Thomas-KN6OC, Robert Munsey, Jr.-K6PIU and a big thanks to everyone one who has helped out this month.
Remember the clubs that support us with a club name, repeater call and service area get a mention during the newscast id break.

Keep an ear open about four weeks from now for Andy's next report.

(*****
SOCAL 2 METER COORDINATION

Back with the news. Repeater coordination problems continue on two meters in Southern California. As we go to air there now appear to be at least nine organizations claiming the sole right to coordinate repeaters to that band. That's up by to groups since we last reported on the situation about a month and a half ago.
As most of you will remember, the blitz of instant two meter coordinators began in late July. This, following the ouster of Sidney Radus, N6OMS, as the chairman of the long established Two Meter Area Spectrum Management Association.
A few weeks after the Radus recall, Carl Cockrell, AB6FC, was elected to replace him. As you heard right here on Newsline, Cockrell publicly pledged to work with system owners and their user groups to help rebuild community confidence in TASMA. And that may have been the straw that broke the proverbial camels back for many system owners. Repeater licensees who want to curtail user involvement in the repeater coordination process.
And it now appears as if the repeater owner operators are rallying once again. This time around some former leaders in the FM community who are spearheading a new repeater coordination council whose membership is limited to only those who own and operate repeaters. A council where repeater user input is specifically excluded except as represented through the desires of system owners. This, as it is in most repeater coordination councils nationwide.
But that's far from the end. The other self professed instant coordinators can best be described as localized. Councils set up to service the perceived needs of a small area of one of the nations most spread out and populous regions. Most of these coordination councils are made up of one or two people and base their right to coordinate on a 1987 regulatory interpretation by former Special Services Branch administrator Raymond Kowalski. Most of these organizations are also limiting their membership to those who live in the area and who already have working repeaters on the air.

(*****
KB4ZJ NAMED RADIO CLUB FELLOW

AMSAT-North America Treasurer Art Feller, KB4ZJ, has been honored by election as a Fellow of the Radio Club of America. The award will be presented at the club's 86th annual meeting, to be held in New York on November 17.
The Radio Club of America, founded on January 2, 1909, is the world's oldest radio communications society. Its membership, past and present, includes most leading figures in radio and

telecommunications. Art Feller has been a member of this prestigious club since 1976.

(*****
DIGITAL VOICE

Phil Karn, KA9Q says that he has created a web page that demonstrates the potential of digital speech encoding as compared with conventional SSB on power-limited satellite channels. Like my earlier demo page on forward error correction, it contains demo audio files in 8Khz mu-law format. The Universal Resource Locator is http://www.qualcomm.com/people/pkarn/voicedemo
If you missed this rather complex URL, drop a note with an SASE to KA9Q at his callbook address.

(*****
ISRAELIS, RUSSIANS EYE ZENIT FOR TECHSAT-1B

Senior officials at the Technion Institute of Technology in Israel are exploring prospects of establishing an agreement with Moscow-based Vniem for launch of the institutes' Techsat-1B satellite on a Zenit rocket.
The Israel Space Agency has sought to dissuade Technion Officials from taking legal action against Moscow-based STC Complex, which contracted for a modified Russian SS-25 rocket that launched Techsat Gurwin-1 March 28. The rocket failed and Gurwin-1 was destroyed.

(*****
DX

In DX, UT3UY, and friends are now active from Libya as 5A1A. Most of the reports indicate that they are active mainly on 20 meters SSB. Check around 14.202 MHz between 22:30 and 02:30 UTC. There were also reports on 21.020 MHz at 17:15 UTC and 28.015 MHz at 20:35 UTC.
Also, the PJ7 operation by K6URI scheduled for September 9th to the 23rd has been wiped out due to recent hurricanes. As a result, he has rescheduled his vacation for Margarita Island off coast of Venezuela. This for October 7th to the 21st and he will try hard to get license to operate.

(*****
SETI REVISITED

News that a name and starting date have been chosen for a radio astronomy project that aims to involve large numbers of radio amateurs.
The SETI League has chosen "Project Argus" as the name for its upcoming search for extraterrestrial intelligence. The SETI League hopes eventually to involve 5000 amateurs worldwide in scanning the sky. Earth Day, April 21, 1996, is the target date for beginning the project.

The name Argus was chosen in 1971 at Stanford University for a proposed ultimate SETI receiver that was never funded. Argus was a mythological figure with 100 eyes that could look in all directions at once.
And yes, there is a ham radio connection to this latest heavenly search. Dr Robert Dixon, W8ERD, is an advisor to the project and the assistant director of the Ohio State University Radio Observatory.

Interesting discovery Jeff ! It's amazing how ingenious the design of some of these things actual turn out to be. 1 crystal to do it all eh ! I am curious though as to how the 5 channels are derived at and whether or not other frequencies cannot be programmed in (perhaps not quite into the 53 Mhz range but outside of the original 5 channels). Do you have a P/N for the synthesizer chip ? Is it programmed from an external chip or done internally ?

I like to hear that there is still some experimentation going on. I made a 6 meter beacon out of an import cordless phone base unit a year ago...been running fine for over a year now and heard all over the place when the band opens up. I wouldn't mind trying out the HT thing if there is a particular model that is a good candidate.

Regards..

Geoff,
Please be patient with the folks giving you grief about your call.
That happened to me the other day on a local repeater, people who
have nothing better to do than play policeman and make us newcomers
feel really _un_welcome.
Anyways, we have just started our radio club here in San Francisco,
and would love to net up with you guys. Unfortunately, we are all
still Techs, but expect that to change RSN.

Good luck with your Net! Remember, youth has the advantage
of the energy!

"Gary P. Fiber" <gfiber@halcyon.com> writes:

>Actually you can get an experminters license for about any frequency.

Yep -- assuming that the frequency is appropriate to the application, and won't conflict with other users.

If you think about it, if some company was designing a new transmitter for 80 meters, exactly how are they expected to test it? They can't air test the prototypes under ham calls (since that would be business use of the Amateur Radio Service), and it would be a bit unreasonable to expect them to do the tests on frequencies that the rig is not designed to cover.

This has been debated too. But in any case, I'll ask why?

> I assume that we want three things:
> 1. A legitimate purpose, e.g. A reservoir of trained
> communication specialists. And to accomplish
> any legitimate purpose effectively we need to:
> 2. Limit crowding on the bands.

Point 2 does *not* following from point 1 above. In fact, it is debatable
that any such provision in the licensing requirements could be made as
spectrum is a public resource we are rationing, not your private playground.

> 3. Finally, I assume the code requirement will end one day.

Hopefully sooner than later.

> Perhaps we can let the coders keep access to the
> bottom 100 Khz of the bands (compromise position?).

Why wouldn't coders have access to all the bands they currently have?
In only a few cases have licensing overhauls taken privileges away from
existing licensees. I hope we won't repeat the Incentive Licensing debacle.
If you mean exclusive access, then you haven't dropped the code
requirement and we're still clinging to the past.

> Is there anyone that doesn't agree with the first two general goals?

I absolutely agree with the first one as it is a primary piece of Part 97
and is a useful distinguishing feature of the amateur radio service.
As I said before, I don't agree with the second one as I don't believe
it is an appropriate licensing goal. A goal such as that could be
interpreted as requiring a PhD in EE to get a license. After all, 60 years
ago, they thought 20,000 amateurs was over crowding! Japan in a much
smaller area has 3 times the number of amateurs we do. Over crowding
is only a problem is we refuse to innovate.

> To accomplish these things, we MUST make the tests harder before
> we drop the code requirement.

It's unclear to me that the two are related. Your supposition only holds
true if you believe your point 2 above is a primary function of the licensing
requirements. Yet I find *nothing* in part 97 that says licensing is to
prevent over crowding.

How would you change the difficulty of the tests? Some say that published
answers make the tests easy. I might agree with that if there was sufficient
evidence from other areas where tests are published and yet still seem to
hold some validity. In any case, that problem is relatively easy to solve by
creating parameterized test questions and using a program to generate
the specific tests. This would pass the Freedom of Information Act
requirements and still prevent strict rote memorization of question to letter
answers. (although I personally believe that anyone who can memorize
the hundreds of questions and answers has made quite an accomplishment.)

Another way to change the difficulty of the tests is to increase the depth
of knowledge required to answer a question. This is to a large extent
already under our control. Have you submitted questions to be included
in the question pools? What level of technical material should be required
for each license class? As a sponsor of a radio club at an elementary school,
I can tell you that average 4th, 5th, and 6th graders do not have an easy
time with the novice and technician material. Sure there are gifted 7 year olds
that have made extra, but that is a terribly small minority.

Are you going to update the question pools to be more in line with current
technology? I don't recall seeing questions on circuits using today's
building blocks. As you try and introduce new technology, what old
stuff are you going to drop out? Or are you going to keep it all and gradually
require a BSEE to get a license? I'm not trying to be facetious, just trying
to get a sense of where you're headed with this.

>modifiying amateur equipment to do this is generally illegal.

Geoff,

Seems you have not understood the basic concept of amateur radio.
Amateur radio is by definition experimental, with the effect that
you are entitled to built and operate transmitting equipement.

(In some countries having built a TRX is a requirement)

As a result, the transmitting range of amateur radios is not
subject to regulations (In fact *all* commercial HF TRX are capable
of out of band transmissions)

The point is that responsibility not to actually transmit out
of band rests totally with the licensee.

Hey John,

I've been using a RS speaker mic on my HTX-202 for about six months now. I don't think you made a bad choice. I always carry mine on my mountain bike when I'm riding and it's taken a tremendous pounding without a single problem. On more than one occasion I've knocked it off the handle bar and had it bounce and drag until I could get stopped. Seems tough enough to me.

Just one ham's opinion.

You make this claim all the time, but never support it. OOK is
exactly equivalent to Non-coherent BFSK when comparing error rates vs S/N.
If I have a nc BFSK signal at the same signalling rate as OOK, they will
preform the same way in the presence of noise. By adding some simple coding
the nc BFSK can surpass OOK, which relies on the poor coding of morse.
Even going to coherent detection is not hard. In fact most CW
rigs have the same hardware inside. OOK can't hold a candle to coherent FSK
not even CCW.

A point of correction. The RA (Radio Adminstration is the UK
equivalent of the FCC) has stated that they intend to continue with the
Morse Code test as being a necessary part of the qualification for access
by UK amateurs to the HF bands, regardless of any change in Radio
Regulations passed at a future WRC.

The change in Radio Regulation 2735 proposed by the New Zealand PTT, which
the RA has decided to support, would do no more than *allow* a licensing
authority to grant full HF privileges without knowlege of Morse Code.

Perhaps this previous version was wishful thinking by

You read something that just wasn't there. The RA stated quite plainly
in their letter dated 7 Aug 1995, and reprinted in the RadCom enclosure,
that they intend to retain testing of Morse Code in licensing the use of
the HF amateur radio bands.

>
>Zack KH6CP/1

Zack is right on here. Metal film resistors are vastly superior to
carbon comp resistors in all respects except inductance. However,
the inductance is usually negligible up to at least 144 MHz. We
have characterized many metal film resistors here at HP and have
found that they are usually intelligently designed so they don't
have a lot of inductance (i.e., only a few "turns").

If you want a really bullet proof 50 ohm resistor, order (as a replacement
part) one of the 50 ohm resistors used for terminating scope inputs on
the HP 17XX series of scopes. They are designed to take a lot of
abuse and have low inductance. And if you do burn one out, it doesn't
go up in flames!

The license is for radio amateurs, not radio professionals. Professionl usually go to college for their training. The FCC probably does not intend that amateur radio operators should be engineers before being granted a callsign. We could do a better job of teaching our art however.

>This is an excellent point!!!! I am sick and tired of
>the no code/code debate. As previously posted: "Stick a fork in it",
>its done.

Perhaps the fact that the old ways are being questioned and challenged in this news group makes you feel a little uncomfortable. I suggest that you not read posts with the word "Code" or "CW" in subject line if your sick of reading them.

>However, because there are those in this group who are predisposed
>to endless, lively debate, can we please (pretty please?!?)
>change the subject? The technical tests are too easy. Let's
>talk about how to make them harder.

I would like to understand this assertion (technical tests...too easy) a little better. Which technical tests, the ones *you* took, or just the ones other people take? Are you referring to the no-code tech exams or the extra class exams?

Is the subject matter covered in the exams too simplistic? Does it not suffice that an operator know what an oscillator is and does, or must he also know how to design an improved one?

Is the True/False and Multiple Choice technique inadequate for determining whether the applicant knows the correct answer? It seems to be good enough for just about every other licensed discipline.

Perhaps there aren't enough questions on the test. Would 500 or 1000 be a more reasonable requirement?

I suspect that you make your assertion based on some observable evidence. And further, you feel that operators who have been licensed since the FCC began releasing the question pool are not

knowlegable enough to conduct themselves responsibly. That would be a problem, but is it true?

It *is* true that we could do a better job of teaching new hams. Perhaps something like a tutorial should always accompany the question pool. Such that when the answer:"A.) Collpitts Oscillator" is given, we ought to add "a Collpitts Oscillator is.....".

But if you are suggesting that we should expect prospective hams to go out and buy a 1000 page text entitled "Everthing There Is To Know About Radio", and learn everything in it before he can pass one of your tests, I must disagree.

The question pool is an excellent way to teach people what is expected of them, but relevant background information should also be provided. I think what you really want is for new hams to learn what they need to know to operate responsibly. However it is absolutely not necessary to put them through a wringer.

5378. Top Ten Reasons to Learn CW Needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-25 00:00:00 UTC
From: pruth@ocvaxa.cc.oberlin.edu
Message-ID: <4471p3$6rh@news.cc.oberlin.edu>
Source record: 237976

I'm helping teach a very large group of people Morse code and would like to hear from those experienced CW operators why CW is a good skill to master, where it shines over all other modes and protocols, its unique characteristics that make learning it and using it worthwhile. The list need not stop at 10 or have 10 reasons, but I'd like to pass along some sound reasons why in this day and age CW is a useful skill. Although I passed the 20wpm and have my Extra, I have not had enough experience with actually using CW over a long period of time to know its actual merits. Thanks. --Bill KB8USZ pruth@ocvaxa.cc.oberlin.edu

Source record: 237978

Thanks to all who have replied regarding the power output of the HTX-404.
Most of the replies found exactly the same results as I have gotten.
One reply said the the output exceeded specs.

Some replies have suggested that I am not using a proper watt meter for 440 Mhz.
I can assure evybody that I am. I have measured the same results on
several watt meters, including a Bird.

I have two HTX-404's and 2 HTX-202's. Both 202's put out 8 watts using
13.8 volts and 3 watts with the supplied battery (7.2 volts). The HTX-404's
only put out 3 1/2 watts using 13.8 volts, and 1 1/2 watts with the supplied
battery. Both 404's were able to be adjusted to 5 watts out using 13.8 volts,
however they still only put out 1 1/2 watts using the supplied battery.

Most of the replies I have received have obtained very similar results to these.
If anybody out there has noticed otherwise, please reply!

Thanks!

J. Duffy Beischel (gamma7@ix.netcom.com) wrote:
: I agree that speed is good when handling emergency traffic. Accuracy
: and the ability to get the message through is maybe more important.
: Having used about every digital method at one time or another, I have
: found that some digital methods fail when the singal drops below a
: certain level. This level also varies depending on the digital method
: being used. In virtually all methods, when the signal dropped off so
: that the digital method no longer worked, the signal was still strong
: enought that CW could have been perfectly readable.

Did you ever think that the digital modes you were using were
non-coherent BFSK at a data rate much higher then CW? If they were,
yes the digital will drop out faster then CW, becuase nc BFSK is the
same as OOK for error rate vs S/N. Since the singaling speed is higher,
the needed S/N is higher. Drop it down to OOK speeds and everything should
have been huncky doory(sp?).
By going to a coherent M-ary FSK with coding and time diversity, OOK
will not be able to touch it in harsh environment operation. In fact, just
adding coding and time diversity will bring nc BFSK past OOK if the error rate
hasn't gotten to close to 50%.

: The other argument is the type of equipment needed. Digital requires
: more complex equipment and higher power. Digital cannot be decoded by
: the human ear. CW is a very basic form of digital communication that
: requires only the most basic equipment and a human ear can decode it.

Yes it is more complex to send and receive, but not by much. Let's
look at transmit first. A CW TX can be an amplified oscillator. Ok it's not
ideal, but some people use this to show how simple it can get. For nc BFSK
we just make two different oscillators. Yes, it's crude, but it works. The
complexity is really not much more then the CW TX. We've added a duplicate
part of the system, and a digital interface to choose which one is used.
That's not bad.
What about RX? Well CW can be realy easy, but for good performance,
I don't think the average emergency worker will be using a crystal radio.
Good CW receivers can get quite complicated. For nc FSK we can convert down
to an IF and just have filters feeding into a comparator. Hmmm, that's pretty
simple, crude but simple. We can even do better by using a PLL and actually
coherently locking onto the signal. Then integrate over mulitple wavelengths,
and the S/N has gone up significantly. This isn't real complex.
As far as the computer goes, low power devices exist that can drive a
modem, keyboard and display, and remain robust. My personal choice is the
68HC11, but you may substitute another easily. If you were talking about TX
power, not really. If the needed S/N is lower, then less power is required.

5385. DTMF Decoder for garage door?

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-25 00:00:00 UTC
From: ring@porky.cb.att.com
Message-ID: <DFHAEF.I4y@nntpa.cb.att.com>
Source record: 237983

My 30-year-old garage door transmitter or receiver kicked the bucket,
and I have to use the push-button inside the house to open the door now.
I have a 2-meter unit at home that I could leave on all the time, and
I was thinking of hooking up a DTMF decoder to the audio output to
momentarily close a relay, causing the door to open.

I was wondering if anyone knows of a device (or easy circuit) that
can decode a DTMF tone sequence (not too expensive)?

BTW, I tried a replacement Genie transmitter/receiver pair from a home
store, but I it didn't work as advertised. I exchanged it for another
identical unit, but the second one didn't work either. I even thought
about an auto burgular alarm transmitter and receiver, but figured
the range might be too small.

Any help would be appreciated.

>DA>don't mean legally or anything like that, just technically. Clearly,
>DA>the answer is no. People can communicate quite well without using CW,
>DA>whether they're using SSB, packet, AMTOR, or whatever.

>Balderdash! You don't know what you are talking about.

Nothing like a nice, thoughtful, pleasant, polite, well-reasoned
reply...

>CW gets through when nothing else can. Now IF everyone had the fancy
>gizmos that let you detect those inaudible TTY signals. As to SSB
>it is no contest. CW is superior in seveal ways as has been demonstrated

Hmmm... When I say that it's possible to communicate on HF without
knowing CW, I'm regurgitating the same tired old arguments that
everyone's seen for ages. When you say "CW gets through when nothing
else can," what are you doing?

Second, this is irrelevant--notwithstanding CW's alleged superiority,
it's still entirely possible to communicate on HF without using it.
Even if I concede that SSB is a vastly inferior mode of communication,
it is still effective in many situations, people can communicate with
it, and you need not know CW to use it.

Third, even if I buy the "CW gets through when nothing else can"
cliche, that's its _only_ superiority. Speed? Ha! Even with all the
Q-signals and other abbreviations, voice is vastly faster than CW. It
also allows for inflectional variations which can't be duplicated with
CW.

Fourth, it's been rather conclusively shown by others on this group
that CW _isn't_ the be-all and end-all of weak-signal reliability, so
that argument fizzles as well.

5389. Re: Top Ten Reasons to Learn CW Needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-26 00:00:00 UTC
From: mike <slmusr03@MBnet.MB.CA>
Message-ID: <Pine.SUN.3.91.950926113151.17942A-100000@access.mbnet.mb.ca>
Source record: 237837

Hi Bill,

1) Starting off with CW is cheap. You don't have to spend thousands.

It cost me about 5 bucks to build a QRP rig that uses CW mode, to be more specific the rig is known as the international 1/4 watter, built around the popular 740X series nand gates. Look at one of the most recent QST mags for details.

2) Sometimes CW is the only way to get started into the HF domain.

This particular point actually is more important than point 1) above.

For those who are financially strapped, this is about the only way to get started into amateur radio in the HF bands. I simply don't have the cash for a 'ready made' amateur station. I do however, have the cash to build a home brew unit, which coincides with me having to learn CW, since that is the only mode available to me considering the type of rig I now have.

3) In bad conditions (noise), CW gets through where SSB or Packet doesn't !

For those who say that the digital modes are far superior to CW, well, I have witnessed a demonstration where HF packet (a digital mode as far as I know) fell flat on it's face, where CW prevailed. As for other digital modes, sure they may be superior, but again, many of us simply do not have the money for that type of equipment.

4) It's fun and challenging

For those who like a challenge, CW is indeed a challenge. And it is a lot of fun. The more I listen to CW, the more I get hooked on it. There is no turning back. Please do not construe this as me being a 'fanatic'. I am not. I simply enjoy CW, that's all.

5) CW in some ways forces you to learn

Because of the fact that I was forced to build my own rig, indirectly forces me to learn CW, as well as learn the theory and practical aspects of how to match my rig, transmission line, and antenna. I do not have the bell's and whistles found on a TS-450-SAT transceiver to do that. Once you have gained the experience, you will be very glad you did (I sure am). Now you have the know how to make your station as efficient as possible. Better yet, if your 'ready made' station experiences a problem, you now have a better understanding on how to cure the problem.

That's all for now.

Regards,

Mike

moritz@ipers1.e-technik.uni-stuttgart.de wrote:
: >Many HT's can be modified to transmit beyond their "normal" range. However
: >modifiying amateur equipment to do this is generally illegal.

: Geoff,

: Seems you have not understood the basic concept of amateur radio.
: Amateur radio is by definition experimental, with the effect that
: you are entitled to built and operate transmitting equipement.

In the United States, which was the country in question, it is illegal to modify equipment to transmit out of band, such as converting a ham radio to CB. It is also illegal to use modified ham equipment in most other services. Several times the FCC has fined ham dealers for modifying or offering to modify ham equipment to transmit out of band.

While it is legal for a ham in the US to build a radio that transmits out of band (as long as it also transmits in band), modifing one a factory built one for out of band transmission has been interpreted as evidence of doing so.

: (In some countries having built a TRX is a requirement)

: As a result, the transmitting range of amateur radios is not
: subject to regulations (In fact *all* commercial HF TRX are capable
: of out of band transmissions)

Not in the US. Most transmitters are limited to transmission in the US ham bands. While most HF TRX are easily modifiable, they are not sold that way.

: The point is that responsibility not to actually transmit out
: of band rests totally with the licensee.

Yes, that is true, but in the US, you cannot get FFC aproval for a HAM transmitter that transmits out of band, which effectivly eliminates it sale (as a retail item).

73,

Geoff.

==========

Well I know I was Speeding and went cliping by a cop with radar ON and
was also Txing on UHF @ 50 watts and I was not pulled over? I tested this
also by cliping by a radar trap again while Txing on uhf @50 watts and I
was not stoped? I have noted this time and time again but not sure if

it,s luck or my uhf sig is blocking the radar or something? I travel a long distance to work on a free way and have never been pulled over when Txing and speeding? 73/ Glen VE7HCE

Well, "Why should I have to learn about antennas? I never plan on
building one - I'll buy them instead. It's a waste of my time
to study antennas for the written test. On a scale of 1 to 10
of really important things to do, studying antennas ranks near
the bottom..."

=:o (hair standing on end)

Actually, studying anything not related to your career or family
could be considered a waste of time. Remember, "One man's waste is
waist man's waist." (or something like that...)

Antennas are still relavant and necessary for amateur communications in
1995. Morse code is not.

>
> I'm helping teach a very large group of people Morse code and
> would like to hear from those experienced CW operators why CW
> is a good skill to master, where it shines over all other modes

Here's a8 reasons that Don N9BAM wrote for the Scuttlebutt of the
Naval Postgraduate School ARC in Monterey CA
(http://www.sp.nps.navy.mil/npsarc/k6ly.html)

BACKGROUND: 35 year old Extra class CW DXer, licensed 23 years

MOTIVE: To prove the necessity and essentiality of retaining CW as a licensing
incentive.

REASONS:

1) Morse proficiency is required to transmit below 30mhz by international law.
It's not just our decision. It truly is an international language that allows
me to communicate via Q signal, etc., with those who I otherwise would not be
able to by reason of accent or language proficiency.

2) Unless you comprehend the generation and reception of a continuous wave, you
certainly won't know how a modulated wave works. In the "old days" when folks
were restricted to a year or two of CW as novices to enter our hobby, they knew
what was going on inside of their radios. They weren't just appliance operators
pushing buttons. I wouldn't want a doctor to operate on me who couldn't sew,
and I don't want to share the HF bands with people who don't know what a carrier is.

3) If anything, we should add a typing test to use the packet mode. Hunt and
peckers must be very frustrated.

4) CW penetrates when SSB or digital is impossible to copy.

5) Theoretically and feasibly, CW has an infinitely narrow bandwidth and is the
most efficient use of our spectrum.

6) CW is cheaper. Many 3rd World ops don't have access to our high tech stuff
with crystal lattice filters for SSB. I work a lot of homebrew rigs. Those
guys wouldn't be on the air except for CW. Most anyone can build a QRP CW rig,
and most anyone can afford one. Let's retain the mode that's accesible to all.

7) CW is a "mode", not a "technology". It broadens our ability to communicate.

8) If you say CW is archaic, how do you feel about the Fourth of July? I am
beginning to wonder how many hams really grasp "Zero Beating" or "800hz offset"?

Can't CW be a learning tool? The Fouth helps us to remember and learn. Have keyboards eliminated pencils? Sure, I can drive a car without being a mechanic,

Many people operate radios without being hams. Good things their are hams around to keep the repeaters and the nodes going, just like we need mechanics to keep cars going. Hams are to radio what mechanics are to cars. Kn Knowledgable.

SUMMATION: The current licensing structure is about as perfect as it can get. No-code radio is a valid hobby and many upgrade by learning additional theory and the code. It just depends if they want to be casual motorists or mechanics.

If you want to be the mechanic type, the best way to learn is by doing - spend some time with CW and learn what makes this hobby tick. Ohm's law, LC constants

and continuous waves are the building blocks of radio. You can use a 2m repeater without knowing didley about them. But that's not Amateur Radio as defined by Part 97.

The Amateur's Code contains this creed: "The Radio Amateur is progressive with knowledge abreast of science, a well built and efficient station and operation above reproach."

FCC subpart A 97.1(d) says this is one of our fundamental purposes: Expansion of the existing resevoir within the amateur radio service of trained operators, technicians, and electronic experts.

WE'VE NEVER RECOGNIZED THE TRAINED OPERATOR IN 97.1(d)!!!!!!!!!!!!!!!!!!!! Those three classes would solve this problem. Operator, Technician and Expert. But that's just about the way it is now, only the name's are different. You would certainly expect the expert to be able to explain a continuous wave, but not the operator. Telephone operators don't know ohm's law. But they are part of the phone company!

So now some operators don't have HF experience, SO WHAT? They can be hams. But to be expert hams they must understand CW, and what better way to learn than by doing? Make the requirement 2wpm for all I care, but make sure the experts can generate and receive a continuous wave before you let 'em below 30mhz.

73,
Don Fresh

Actually, of the all the HT600 / P200 / MT1000, I have worked on over the years, most, if not all, would handle a band split this wide quite easily.

In my MT1000, 99ch. I have freqs from 144-163. Works quite nicely Thank You.

==========

BIKEHAM is an automated mailing list reflector that accepts an email message from any list member, and automatically sends it out to every other member of the list. Unlike Usenet newsgroups, the service is then archived on individual member's email services, instead of a news server that must access millions of bytes of information just to find the one message of interest.

There is no charge for joining us, and you can subscribe and unsubscribe to the list at any time.

The service is run using the Majordomo software at Stanford University in Palo Alto, California. Commands are sent to the email address:

majordomo@cycling.org.

Since the Subject: line of your message is ignored, the commands listed below must appear in the BODY of the message. Multiple commands can be sent in a single message, one command per line. The last command in your list of commands should be the END command. (This prevents Majordomo from barfing on any signature lines your mail program might automatically append to the end of your message.). The following commands will do things on the BIKEHAM mailing list.

SUBSCRIBE BIKEHAM
Subscribe yourself to the BIKEHAM list. When you subscribe to this list, you will receive one email message for each message sent to the list, immediately as it is processed.

SUBSCRIBE BIKEHAM-DIGEST
Subscribe yourself to the BIKEHAM-DIGEST list. When you subscribe to this list, you will get one email message a day from the list server, and it will contact all of the traffic that was sent on the list during the last 24 hours.

UNSUBSCRIBE BIKEHAM
UNSUBSCRIBE BIKEHAM-DIGEST
Unsubscribe yourself from the BIKEHAM or BIKEHAM-DIGEST lists.

LISTS
Show all of the lists served by this Cycling.Org server. There are a lot of bicycle-oriented lists here, and you might find some that you're quite interested in.

WHICH
Find out which lists you are on.

WHO BIKEHAM
Find out who is on the `listname' list. You do not have to
subscribe to a list to find out who is already on it.

INFO BIKEHAM
Retrieve the general introductory information for `listname'.

HELP
Retrieve this message.

END
Stop processing commands (useful if your mailer adds a signature).

EXAMPLE

To subscribe to both the WW and MTB-digest lists and find out who else
is on each list, send a message to majordomo@cycling.org with the
following five lines in the body of the message:

subscribe ww
subscribe mtb-digest
who ww
who mtb-digest
end

Majordomo will process your request and send you confirmation (and
your requested information) if everything goes O.K.

Remember, commands must be listed in the BODY of the message sent to
majordomo@cycling.org. Commands in the Subject: line are ignored.

If you have problems with this, drop me a note.

You will note that the reason he is defensive is that he bought one or has some deal testing one(see other message from him saying he will be on the air with one). It is a common human trait to believe you did the right thing. What amazes me, however, is how hams seem to be getting all excited about anything that is new, or for that matter, claims to be new and hot. It has been interesting to read messages here and on other nets that demonstrate great excitement about new radios only, as far as I can gather, because they are new. We hear comments like; "it is a dream radio", "it sure looks great", "the layout of the front panel is really cool" and so on. I guess hams are not interested anymore in good, solid basic radio performance. Instead they want cute, little, barn door front ends with lots of little glowing lights and complicated menus. Seeing the responses to the 775, 1000MP, 870, 706 and so on demonstrates this quite well. It shows that the manufacturers know what buttons to push (no pun intended) and that their marketing is excellent. It has been my experience (I've owned 18 different HF rigs and was a victim of this mentality) that new is not better and new rigs genrally have gremlins. Despite this, the demand is generated by marketing and the make it cute concept. It amazes me how hams will stand in line for something that only claims to be good or even makes no technical specification claims of any importance at all!

1.) It is fun! (for some of us)
2.) Can crack a DX pileup with 100 watts and a dipole (I can't seem
to do that on SSB. No phone skill, I guess)
3.) Keys look cooler than microphones.

Uh, well... I guess thats all I can think of. I'm glad you asked
for merits of the mode, and not for the merits of testing for it.
I couldn't stand another thread of that!

73, and please post your finished list.
Jeff

>even more from the young.

More fisher horseshit! So I put a dollar in back in 1950 and I get a dollar back today and you call that even. If the govt had given all the social security money to the prudential, mutual of Omaha, etc, the average SS recipient today would be receiving $36,000 a year. The govt took the money that people could have put into a mutual fund or whatever and done far far better than SS. Don't forget the employer's contribution which truly comes out of what would be employee compensation. How much do you put into the teacher's retirement program in your district? When it comes time, tell them that you only want back as much as you put in, OK?

I tried it out by tapping on my table and my "e" sounded just like my "t"
and my "a" sounded just like my "i". Where did I go wrong :-)

You're right Moritz, it isn't illegal to do the modification, just
illegal to use the modified radio outside the amateur bands. Of course,
there seems little point in doing the mod if you aren't going to use the
radio. In some cases, the FCC has declared that possession of radio
equipment capable of being operated illegally is prima facia evidence
of intent to violate the law. I'm thinking here of modified amateur
equipment capable of operating in the Class D CB band, but that could
also apply to HTs modified to violate the ECPA or perhaps to those
modified to operate where they aren't Type Accepted. There's no guiding
case law yet in these latter situations, but if the abuses continue,
there might be.

Yeah, you can. The neatest way is through the bottom, but you have
to slide the battery off to get to the switches. It still is a pain
compared to being able to store the tone with the frequency in a
memory.

Really? I can't wait to see what Icom comes out with to add these modes
to my radio.

A hybred duplexer connected to a solenoid to thump the table on TX and RX.
Perhaps a set of flags. A mechanical hand to operate the flashight. Or
<heh> a aircompressor to run the whistle.

Hey, Gary, (i.e. Gary Fiber at Icom) are you writing all this stuff down?

I'm really happy to know that after I spent all that money on equipment
to do a good job of transmitting and receiving RF, it can be easily "fixed"
to the lowest common denominator.

I believe the original request was for "What advantages do you see for
CW application of Morse Code over other modes?"

And I stand by my original assertion, it is an additional and not universal
skill. Almost anyone can talk. (Lets don't start with the number of people
that are deaf/dumb/mute or otherwise handicapped.) Not everyone can
communicate useing morse code.

>>> Others can supply others...

3. If your shack is in a home with sleeping children, you can have a whole night of furious activity without ever disturbing the kids as long as you use headphones.

4. There are new bands, such as 30 meters, on which phone is not permitted (presumably because the band allocations are so small that phone users would occupy too much of the allocation).

5. It is far easier to separate, in one's mind, a desired signal from another nearby signal when the two signals are fixed-pitch tones than when they are human voices. Audio DSP filters can provide a very tight channel for CW users at a low cost.

6. Keys and keyer paddles have many of the same esthetic charms as fountain pens and other artifacts. They are attractive, functional, and a statement of personal taste in a way that a microphone is not. A shack with a key or a paddle has associations that a box with a microphone can't match. This is a small factor, but worth something nonetheless.

7. Copying the code is like riding a bicycle. When you make the transition from sweating every letter to "hearing" entire words in your head, it's a rush that has to be experienced. Some operators can even hold a conversation with someone in the shack while they're copying. It just *feels* good.

Anyone want to contribute three more?

>>expensive, around $1500 and up, with few exceptions. many hams can't
>>afford to even use hf, even if they could pass the code requirement.
>>and the hams i know won't settle for small single-band kit rigs.

Well, there are several answers to that. If people won't settle for
what they can afford, that's THEIR problem. I don't want to settle
for anything less than a new Land Rover and a Porsche, but somehow
what I've GOT is an '87 Pathfinder and an '84 RX-7 and I'm thankful
for them. I haven't given up on the Land Rover and Porsche, but
until I can afford them I'll use what I *can* afford.

But at any hamfest you can find good useable HF SSB rigs in the
$300-$500 range... Drakes, Swans, etc. Tube type, no "memories",
but good solid usable rigs.

I got started when I was 13 years old and I had to start with
what I could afford... and old big used receiver (Hallicrafters
SX-101, back when old big receivers were just considered clunky) and
a kit, CW only transmitter (Heath DX-60A). No VFO, but a novice
couldn't use one anyway. I started out with three crystals, because
that's all I could afford at first.

If these kids can afford the cars I see in the high school
parking lots (I bought a wrecked Beetle for my first car) and
the computers they have in their homes, they can afford ham
radio. It's all a matter of priorities. We've got to SELL
them on the attractiveness of ham radio.

>little better. Which technical tests, the ones *you* took, or just the
>ones other people take? Are you referring to the no-code tech exams or the
>extra class exams?

Let me help you understand. I contend that ALL of the amateur radio
tests, as presently administered, are too easy to determine any
reasonable (not professional) level of electronics technical competence.
A big culprit is the practice of publishing all of the questions that are
going to be on the examination. The scope of the examinations are
perhaps a bit to narrow, but that is more easily fixed.

Multiple choice questions are not a problem, but releasing the
question pool is a *terrible* idea.

I have some experience on which I base this opinion. I passed the
Novice test in 1968 (at 13 years old) and the General and Advanced
tests in 1970. This was long prior to a published question pool
or even the Dick Bash cheat sheets of the 1980s. Since you couldn't
upgrade to Extra until you had been a General or above for at least
2 years, by the time I was eligible to upgrade I was in high school
and otherwise occupied. Besides, I didn't really need the additional
privileges.

Since then I have taught in licensing classes as well as provided
individual help to people getting their ham license.

About twelve weeks ago, I decided to finally upgrade to Extra.
I skimmed through the question pool during the two nights prior to
the test, and passed the exam on my first try with only one question
wrong (and I must have skipped that question during my review, because

I disagree with the answer and would have remembered my disagreement
with the question pool if I had seen it.)

Now I am an engineer, but mechanical not electrical, though I did
take a couple more EE courses than would have been required in the
ME curriculum (but this was quite a few years ago). The closest
I get to radio theory in my work is an occasional excursion into
high voltage AC power distribution.

Although I found several of the questions elementary for the
highest class of amateur license, the real difference was the question
pool. Having all of the questions at hand made it SO much easier.
In fact, too easy. Being an Extra doesn't mean what it would have
years ago, but I already knew that. I was obvious from the people
I knew who were recent "Extras" that the license didn't mean what
it used to. (Not the least of which are the "90 day wonder" Extras,
who have passed the tests but have virtually no notion of what
ham radio is about.)

>I suspect that you make your assertion based on some observable
>evidence. And further, you feel that operators who have been
>licensed since the FCC began releasing the question pool are not
>knowlegable enough to conduct themselves responsibly. That would be a
>problem, but is it true?

Yes. It's obvious. Listen to the bands. Yes they ARE much
worse than they were 20 years ago. No, they weren't perfect then,
but they were a lot better than they are now.

[snip]
>But if you are suggesting that we should expect prospective hams to go
>out and buy a 1000 page text entitled "Everthing There Is To Know About
>Radio", and learn everything in it before he can pass one of your tests,

Well the Novice tech text of '68 or so was probably 30 pages or so,
and General and Advanced were about 50-60 pages or so. I've got my old
manuals somewhere, so I'll have to check. But I also used the ARRL
Handbook and a couple of other books for General and Advanced, so I'd
estimate I went through 400-500 pages of info to get to Advanced. If
I did it as a 15 year old who had, at most, 1 year of high school
algebra, it must not have been overly burdensome.
When you passed the test in those days, you had definite proof
of accomplishment.

>The question pool is an excellent way to teach people what is expected
>of them, but relevant background information should also be provided. I

The question pool makes a travesty of the examination process and
the process should be changed immediately.

Perfect, then perhaps NH6IL will *finally* upgrade to Extra.

Ever wanted to broadcast a phone conversation; yours or someone else's??

Make an elaborate speaker phone!!

This is just one of many offered!!!

Super-Miniature Phone transmitter
-Smallest phone transmitter
-tunes to 88-108MHz
-Use with any FM broadcast receiver
-3 mile range
-attach to phone line anywhere in the house!!

MANY OTHER MODELS!!!

Well now you can transmit a phone conversation with easy setup, UP to
5 MILES!!! for a nominal price.

Do you or someone you know has a need for this kind of device well if
you do, then send $5 for an
information kit to

Compu-Consult
Attn:Simon Plashkes
26 Squire bakers lane
Markham Ontario
Canada L3P3G9

REMEMBER TO INCLUDE YOUR E-Mail address
(eg, BOB@MSN.COM) and your Information Fee ($5)

Make all checks out to Simon Plashkes.

A few years ago I bought a discone antenna from a company called "procomm". It covered 2m-10m. When I moved I did not take it with me thinking it would be easy to find another.....

yes I know discones dont work all that well - but I have little choice in this matter ---

Does anyone know where to find another one of these - procomm advertised in 73 mag back in jan or feb of 1993 ---- but now I cannot find them. If any one has info on this company or another discone antenna please send me a note (e-mail)

thanx

1995 NUTMEG HAMFEST and ARRL CONNECTICUT STATE CONVENTION

Official Hours: Sunday October 8, 1995, 9 AM to 3 PM
with campsite and vendor set up starting Saturday Oct 7 at 4 PM

Southern New England's biggest and best hamfest and computer show.
Indoor and Outdoor Displays - ARRL Forums - Significant Seminars
All on the grounds of the famous Fair Grounds in Durham

* Giant ham radio and computer flea market
* Official 1995 ARRL Connecticut State Convention
* Leading commercial vendor displays
* VEC Exams
* Outstanding refreshments
* Ample free parking
* Overnight camping on the grounds with water/electric hookups
* Indoor and Outdoor spaces plus tailgating

Inside booth - Table - Admission ticket $25
Inside booth - Additional tables discount rate

Outdoor Tailgate or Camping Spot - Admission ticket $20
Additional Outdoor Spot $10

General Addmission (12 and over) $5

General Info: Dan KA1SZP @ W1NRG.CT.USA.NA
Bill W1KKF 203-269-8252 (eves)
VE Info: Joel N1JEO 203-235-6932
Indoor and Outdoor Space Reservations and Info:
Dan 203-349-1304 (eves)
162 Tri-Mountain Rd
Durham, CT 06422

The Nutmeg Hamfest, sponsor of the 1995 ARRL CT Convention, is a cooperative of:
Meriden Amateur Radio Club
Middlesex Amateur Radio Society
Shoreline Amateur Radio Club
Proceeds from the event will help support public service, scholarship, charitable
and civic activities.

That is the debate I was trying to start. I think to
accomplish #1, you have to have #2. See more later under your comments
on innovation.
>
> > Perhaps we can let the coders keep access to the
> > bottom 100 Khz of the bands (compromise position?).
>
> Why wouldn't coders have access to all the bands they currently have?
> In only a few cases have licensing overhauls taken privileges away from
> existing licensees.

I don't want to take anything away from anybody. I meant let the coders
keep _exclusive_ use of the bottom of every band they have access
to now. The no-coders could have, say, the top 60% of each HF band.
The coders would have access to everything the no-coders would.

> If you mean exclusive access, then you haven't dropped the code
> requirement and we're still clinging to the past.

Yes, you could call it clinging to the past. I am trying to find
a politically palatable middle road. Let both sides of the
endless "code-test/no-code-test" debate "win."

>
> > Is there anyone that doesn't agree with the first two general goals?

> interpreted as requiring a PhD in EE to get a license. After all, 60 years

> ago, they thought 20,000 amateurs was over crowding! Japan in a much
> smaller area has 3 times the number of amateurs we do.

Aren't most Japanese amateurs on VHF? What does 2M sound like in
Japan? I have no idea....does it sound like 11M? Japan is more than
1500 miles long isn't it? Perhaps crowding isn't a problem because of
the distances involved. I wish to confine this crowding question
to HF.

>Over crowding is only a problem is we refuse to innovate.

Innovation....Good point. I still stand by this: to accomplish any
legitimate purpose on HF we need to limit crowding. It has nothing to
do with me wanting a "private playground."
I want to keep international amateur spectrum from sounding like 11M.
We must keep QRM under control to accomplish almost any sort of
legitimate purpose.
Now, you raise a GOOD point....innovation. Perhaps
some other digital mode or voice mode could become a standard
for HF communications the way SSB replaced AM. Because
of the uncertainty of such a solution, I suggest that
we open up the real HF bands to no-coders on a limited basis.
The resulting crowding might serve to spur some really useful
innovation.

> > To accomplish these things, we MUST make the tests harder before
> > we drop the code requirement.
>
> It's unclear to me that the two are related. Your supposition only holds
> true if you believe your point 2 above is a primary function of the licensing
> requirements. Yet I find *nothing* in part 97 that says licensing is to
> prevent over crowding.

I believe that crowding will impede any "primary function" written
into part 97. Perhaps we can innovate away from the imposition
of QRM. Do we want to bet the *farm* on that? I vote not. I want to limit
crowding. If we want to bet *part* of the farm, I might consider it.
>
> answers. (although I personally believe that anyone who can memorize
> the hundreds of questions and answers has made quite an accomplishment.)

Yes, and I guess memorization is a better QRM filter than nothing.

>
> of knowledge required to answer a question. This is to a large extent
> already under our control. Have you submitted questions to be included
> in the question pools? What level of technical material should be required
> for each license class?

The level of technical material required is a more worthy matter for
debate than is code/no code. However, IMHO, today's tests are
both too easy and out-of-date. (I took my novice in 1973, General
in 1976. It took months of hardwork. I passed my Advance and

Extra in one sitting in 1994. It was easier.)

Any changes should be made with the following premise: it is
desirable to disseminate useful knowledge efficiently and broadly.
Discourage ignorance whenever possible.

> Are you going to update the question pools to be more in line with current

Well, I think dropping old, musty questions is a good place to start!
I noticed a few of these as I was upgrading last year.
:-)
The question pool should reflect current technology in so
far as practical. By current, I mean both currently in use
and currently under development. I do not know how to submit
questions. I would like to. Do you know how to do it?

That's the transmitter, how about the receiver? Actually, you're only a varactor away from a FSK transmitter, and that would maybe add 10 cents to the cost. I already hear the cries of "what about the computer?", but if you're posting here, you already have that covered. For the simpler digital modes, any scrounged terminal will do, cost nothing.

>2) Sometimes CW is the only way to get started into the HF domain.

>is the only mode available to me considering the type of rig I now have.

As noted above, that's not true. A FSK transmitter is not noticably more complex or expensive than a OOK rig. And if you're limited to low power, or sub-optimal antennas, some digital modes offer a serious performance advantage over OOK Morse. By homebrewing, and scrounging, the cost need not be significantly greater either.

>3) In bad conditions (noise), CW gets through where SSB or Packet doesn't !
>
>For those who say that the digital modes are far superior to CW, well, I

>I know) fell flat on it's face, where CW prevailed. As for other digital
>modes, sure they may be superior, but again, many of us simply do not have
>the money for that type of equipment.

This is the main reason I'm replying. There should be little wonder that HF packet, as implemented with Bell 103 modems, at 300 baud, with an unsuitable protocol, is inferior to OOK Morse in noise. If you were trying to design a bad system, you couldn't do much worse than today's HF packet. In fairness, it was never intended to be a weak signal mode, and k in the equation below is not constant at higher signal levels. The error rate drops asymptotically after

a threshold signal level is reached.

The Shannon equation tells us that, all other factors held constant, symbol rate and error rate go hand in hand. That is, k=e/B. OOK Morse at 20 WPM is roughly 8 baud, so Shannon says it should have about a 30 times better error rate, all other things equal, than a signal at 300 baud. HF selective fading time says that symbol rates in excess of about 50 baud get chopped up, also leading to a higher error rate. And AX.25 requires a retry if there is only *one* error in a frame, while the operator can choose to ignore or guess a missed symbol with OOK Morse. So there's little wonder that HF packet, as presently implemented, falls far short of even OOK Morse performance as the noise floor is approached. The way it is designed *forces* that to be true.

It doesn't have to be designed that way, however. Clover presents a, somewhat more sophisticated than necessary, counterpoint. First, it uses a base symbol rate of 31.25 baud. This slips under the selective fading window, and approaches the baud of 20 WPM OOK Morse. And all other factors are *not* held constant. It uses PSM, a form of antipodal signalling, like BPSK, Gray coded QPSK, or MSK, that has an intrinsic advantage over OOK or non-coherent FSK of from 6 to 9 db depending on the exact form of the demodulator. And it employs an error tolerant protocol with FEC. It doesn't use as powerful an error correcting coding as some other methods, but it is still much more robust than operator guessing.

Now Clover requires a $399 proprietary bit of hardware, but that's about the same cost as a PK-232, which is horribly inferior, so there's no serious cost penalty for using a much superior method. Still, it's too expensive for the financially strapped amateur. No matter, we can design a cheap system that does better than OOK Morse by taking some of the lessons taught by Shannon and Clover to heart.

First, we see that we need to use a lower basic symbol rate to avoid selective fading chopping. Plain old 45.45 baud RTTY addresses this. Second we need an error tolerant protocol. We can adopt the one used in OOK Morse and ordinary RTTY, IE operator guessing, in order to avoid the hardware overhead cost of FEC. So now we're back to the 10 cent cost differential with almost the same performance as OOK Morse. If we'll spend a few cents more, we can use a coherent antipodal modulation and pick up 9 db over OOK. So for just pennies, and a bit of knowledge of information theory, we can beat OOK Morse performance in noise.

Working smarter *is* better than working harder, because no matter how hard you work with Morse, you can't overcome that 9 db advantage. (And we can do much better than 9 db if we employ coding gain, though that costs more to implement. TANSTAFL)

SB SPCL ARL ARLX057
ARLX057 Hams help after storm

Once again Amateur Radio provided early communication out of a disaster area, in this case the US Virgin Islands, following Hurricane Marilyn. By September 15th, 1995, telephone circuits on the island had become overloaded, even before the hurricane had arrived, according to Dave Rosen, K2GM. As Marilyn passed over the capital of St Thomas early on the morning of the 16th, a vital telephone microwave link already had failed.

On the morning of the 16th, Lee Reisenweber, VP2VE/NP2CG, operating from KP2A, the station of John Ackley, sent a vital damage assessment message from the St Thomas Emergency Operations Center to UN Amateur Radio Readiness Group net control Ray Crites, K1WW, in Greenville, North Carolina, on 20 meters.

The traffic was relayed to 4U1UN, the UN Headquarters Amateur Radio Station in New York City, from which it was given directly to the Federal Emergency Management Administration. This was some of the first word received by FEMA from the US Virgin Islands describing what had occurred on St Thomas, Rosen said.

At the time, Reisenweber was using generator power and a ''rapidly installed'' 40-foot piece of wire for an antenna. In addition to traffic later passed by voice, digital modes were used extensively, with message files sent by PACTOR.

I've used an TS-870 and I think the DSP Noise reduction is a joke. Tried it on the air and all the DSP did to weak signals was to
garble them. The radio has some nice touches, true. But the DSP sounded like my TS-850 with an outboard Timewave filter.
The guy who had the '870 was so disgusted with it, he sent it back!

Say, if you like the radio so much, did you notice the "100 db of noise reduction with no signal loss!" that Kenwood claims the
'870 has? That ad is on the inside cover of the October QST. Gee! 100db would reduce S-9 +50db noise down to the pin.
Yeah, sure!!!!!!!!!!!!!!!!!!!!!!!!!!

ARLX055 Call for club judging

ZCZC AX25
QST de W1AW
Special Bulletin 55 ARLX055
From ARRL Headquarters
Newington CT September 27, 1995
To all radio amateurs

SB SPCL ARL ARLX055
ARLX055 Call for club judging

It's time for the Amateur Radio New Service's annual Publication Contest. The ARNS is an organization of ham newsletter editors and publicists, and publishes the monthly ARNS Bulletin ''to help its members better promote Amateur Radio by improving their own publications.''

Each year, a committee of ARNS editors calls for sample newsletters from members and then ranks them, providing useful advice in the process. The contest is open to all Amateur Radio organizations and ARNS membership is not required (general circulation magazines and professional journals are not eligible).

To enter, clubs should submit one copy of any issue of their newsletter from the period July 1994 through December 1995. Send them to ARNS President Lee Knirko, W9MOL, 11 South La Salle St, Suite 2100, Chicago, IL 60603.

For information about ARNS membership, write to ARNS Secretary Pam Myers, N8IAK, 2325 Ansley, 20, Alliance, OH 44601.

>---

>BACKGROUND: 35 year old Extra class CW DXer, licensed 23 years

>MOTIVE: To prove the necessity and essentiality of retaining CW as a
>licensing incentive.

Unfortunately, many of these reasons are just flat-out wrong, and
reflect classic misconceptions about continuous-wave Morse Code. What's
disturbing is that the individual who wrote this is possibly in the
Armed Forces, or is involved in the post-graduate education of
U.S. Naval officers.

Because some of them are just plain wrong, and may not hold up under
further scrutiny, using these as a basis to train newcomers to the hobby
has a potential to alienate them from an avocation that would seem to
have a lot of superstition and obsessive religious devotion to
relatively unimportant things. You'd be far better off presenting it as
an enjoyable mode with intrinsic motivations for its use, but something
that has clearly been pre-empted in the communications world.

Gary Coffman, KE4ZV, and others have done a good job of rebutting most
of these, so I will just quickly summarize. One of them seems to be a
total non-sequitur that I just can't resist responding to.

>REASONS:

>1) Morse proficiency is required to transmit below 30mhz by
>international law. It's not just our decision. It truly is an
>international language that allows me to communicate via Q signal,
>etc., with those who I otherwise would not be able to by reason of
>accent or language proficiency.

Laws can change, and they should change in the face of updated practices
in communications. Matter of fact, with the Coast Guard and Maritime

Services slowly phasing out Morse Code, operating in that mode may actually *preclude* effective communications in times of emergency. The United States is actually one of the last holdouts for abolition of this requirement. Most notable in their support of doing away with Morse Code requirements seem to be many Third World countries (see my rebuttal to the argument that Morse is "economical" below).

Yes, this bears repeating: Morse Code is *not* a language. It does not have a grammar. It may have a syntax, but it has no inherent semantics (i.e. meaning) beyond the underlying language it conveys as a *character set*. Once can make a convincing argument that Q-codes are a form of primitive language, but one certainly doesn't need Morse Code to communicate them (voice, or even one of those evil digital modes, can be used to communicate the "language" of ham radio).

>2) Unless you comprehend the generation and reception of a continuous
>wave, you certainly won't know how a modulated wave works. In the "old
>days" when folks were restricted to a year or two of CW as novices to
>enter our hobby, they knew what was going on inside of their radios.
>They weren't just appliance operators pushing buttons. I wouldn't want
>a doctor to operate on me who couldn't sew, and I don't want to share
>the HF bands with people who don't know what a carrier is.

I was tempted to discuss whether or not doctors should be trained in the use of leeches, but it seems that's actually a modern technique whose usefulness is confirmed by scientific research. One might instead make a silly argument that doctors need to unnecessarily "bleed" patients so that they "understand" the background of medicine by what has been done in the past. Some things done in the past are just flat out wrong. They may have been right in the past because we didn't know better, but we do know better now. Just as we no longer teach school children how many pints of ale are in a "Firkin," we lose nothing by throwing out specific domain knowledge if there are better ways to do something. Sometimes arbitrary memorization of obsolete skills are a hindrance to learning.

I might also note facetiously that since Morse Code *is* a form of modulation, then it doesn't fit your criteria above. We should then instead teach new hams to operate key-down (long-dah) to understand how carriers work. Obviously we are not in the "carrier" business, we are in the communications business.

>3) If anything, we should add a typing test to use the packet mode.
>Hunt and peckers must be very frustrated.

How about depending on a little "OJT" to get one's typing and/or CW speeds up to snuff if one chooses to operate in those modes? The desire to participate and communicate effectively should be enough motivation.

>4) CW penetrates when SSB or digital is impossible to copy.

Again, flat-out wrong. Many digital modes, including those as primitive as RTTY, can work at signal-to-noise ratios below the threshold of human

hearing. Sorry to again restate a hackneyed rebuttal, but it's true: Voyager wasn't sent out into deep-space with a Morse Code transmitter, it instead uses some of those evil "packet radio" modes using forward error correction (FEC) whose performance at low signal-to-noise ratios is orders of magnitude better than any form of Morse Code. Such technologies are rapidly becoming within the reach of amateurs as the result of advances in microelectronics. Using such "black-boxes" can be experimentation and involve learning if they are used as building-blocks in the context of ham-designed communications *systems*.

>5) Theoretically and feasibly, CW has an infinitely narrow bandwidth
>and is the most efficient use of our spectrum.

However, new developments in technology teach us that narrow bandwidth isn't necessarily most efficient. There are good theoretical arguments (and practical applications) that demonstrate that sometimes wide-band modes are more efficient in terms of data rate per unit bandwidth. Narrow bandwidth signals aren't of much use if they are packed shoulder-to-shoulder on the radio bands (and are much more prone to mutual interference). The ultimate spectrum hog of "spread-spectrum" seems most promising in terms of its counterintuitively efficient use of spectrum.

>6) CW is cheaper. Many 3rd World ops don't have access to our high
>tech stuff with crystal lattice filters for SSB. I work a lot of
>homebrew rigs. Those guys wouldn't be on the air except for CW. Most
>anyone can build a QRP CW rig, and most anyone can afford one. Let's
>retain the mode that's accessible to all.

Third World inhabitants and their governments are not stupid. When it comes to asking for foreign aid from Uncle Sam, it's always in the form of high technology (F-16's, satellite ground stations, modern medicine and doctors, etc.) because they see it as the key to them advancing beyond their present decrepit state. If I were a leader of a Third World country, I would be absolutely horrified at the prospect of my country's citizens spending their precious time training their brain to learn a communications mode that is rapidly becoming defunct.

Is it any surprise then, that many of these countries usually chime in and advocate the abolition of the requirement for Morse Code?

Arguments to the effect of "CW is simple" forget that there is a "modem" involved in CW communications. One that requires a non-trivial amount of time (and money, since time=money for most of us, including the Third World) to not only initially train, but keep proficient.

>7) CW is a "mode", not a "technology". It broadens our ability to
>communicate.

It is but one tool in the toolbox, and not necessarily a very good one in all circumstances. Having a toolbox full of tools broadens our ability to communicate, not necessarily one specific tool. There's also something to be said for using the right tool for the job (even my high

school shop teacher could grasp that concept).

You may deny it, but CW *is* a technology, and not a terribly good one. We are, after all, in the technology business, even if only incidentally.

>8) If you say CW is archaic, how do you feel about the Fourth of July?

Now that's an argument I've never heard before. Probably because it's almost a complete non-sequitur (analogous to "You don't like a Chevy? How about a Pink Elephant? Which would you rather be driving during the DT's?") to which I can only respond with, "huh?"

>I am beginning to wonder how many hams really grasp "Zero Beating" or
>"800hz offset"?

>Can't CW be a learning tool? The Fouth helps us to remember and learn.
>Have keyboards eliminated pencils? Sure, I can drive a car without
>being a mechanic,

>Many people operate radios without being hams. Good things their are
>hams around to keep the repeaters and the nodes going, just like we
>need mechanics to keep cars going. Hams are to radio what mechanics
>are to cars. Kn Knowledgeable.

>SUMMATION: The current licensing structure is about as perfect as it
>can get. No-code radio is a valid hobby and many upgrade by learning
>additional theory and the code. It just depends if they want to be
>casual motorists or mechanics.

Actually, there are good arguments to the effect of incentive licensing damaging our hobby by encouraging "credentialism" or the pursuit of paper in the absence of actual experience or knowledge.

>If you want to be the mechanic type, the best way to learn is by doing
>- spend some time with CW and learn what makes this hobby tick. Ohm's
>law, LC constants

I would agree with two out of the three above. Ham radio does suffer from a lack of experimentation and self-training, but Morse Code is no panacea.

>and continuous waves are the building blocks of radio. You can use a
>2m repeater without knowing didley about them. But that's not Amateur
>Radio as defined by Part 97.

How about communications in times of emergency, or promoting international goodwill? (hey, the repeater could be bordering on Canada or Mexico, you know :-).

>The Amateur's Code contains this creed: "The Radio Amateur is
>progressive with knowledge abreast of science, a well built and
>efficient station and operation above reproach."

Unfortunately, the extreme misconceptions, ones that are so strongly held, seem to be in diametric opposition to the Code above. A progressive amateur, "with knowledge abreast of science, a well-built and efficient stations and operation above reproach" would realize that maybe it's time to leave Morse Code in the history books, at least as a mandatory mode that all must learn.

>FCC subpart A 97.1(d) says this is one of our fundamental purposes:
>Expansion of the existing reservoir within the amateur radio service of
>trained operators, technicians, and electronic experts.

Again, fanatical devotion to (as opposed to recreational use of) Morse Code is a contradiction of the above. Morse Code communications can serve some of the other purposes such as intercommunication and international goodwill, but these are clearly much less important, even by your own criteria that you've stated above.

This is going to be my first and last soapbox on CW here...

Why can't any of you learn code? If a 5-year-old can learn it, why would anyone of reasonable intelligence not be able to pass it?

My best guess is that those who "can't" learn CW have either told themselves precisely that so many times they believe it, or are just too lazy to spend 1/2 hour per day practicing, or are so stubborn that they'd rather spend their time complaining about CW when they could be learning it.

I'm 16 years old, and it only took me 3 weeks to go from no code at all to passing the 13 WPM exam. And, that was with school, homework, etc.

If you were able to pass your Tech exam, chances are you aren't stupid. If you aren't stupid, you DO have the mental capacity to learn CW.

Instead of telling us why you can't learn it, friends, spend your time TRYING to learn it!

Good luck and thank you for your time.

I have a question about the history of Bear Hill in Waltham.
This is the hill right beside Route 128 with about 5 towers on it now.
About 15-20 years ago there was a tall free standing tower there with 2
microwave dishes mounted at the top, one over the other, both pointed
north. The tower also had a "crown" of several whip-type antennas on
top. The 2 dishes were removed several years ago, and recently the tower
was removed.
Could anyone please tell me what this tower was and when it was
built, and maybe what it was pointed at?
Some other current uses of the hill that I am aware of are cell
sites, and I believe an experimental 6 GHz mobile phone system (maybe
someone can correct me on this?).

Thanks!
Alex

: In reality, CW isn't even true digital since it actual has more than
: two states. It is not defined as simply off and on, but rather it is
: off, on for a short pewriod (dot) and on for a longer period (dash).
: Ignoring even that, there isn't anything one needs to know about any
: specific coding scheme to understand or be an expert in digital
: technology. I don't know anything about ASCII except that it is
: a 7 bit coded character set, nor do I care. There are other codings
: as well (EBSDIC, etc.). Bottom line is that CW is not a building
: block to greater understanding of any ofthe many other modes being
: used.

Actually CW is digital. Digital comm doesn't need to have two
discreet steps, just steps that can be categorized into discreet bins, like
dits and dots. We can also look at the off as being a clocking reference with
two time based symbols. The coding, morse, is a run length variable coding
that has some compression, but little correction.
As far as being a building block of modern digital communications,
it's not even really a distant cousin. Your right on the money there.

>>> the average cost of an HF rig is...$1500 and up...

When I got my first license in 1969, a DX-60 transmitter was a perfectly decent starting rig and Heath also made a CW-only transceiver for the Novice bands -- which could serve a General licensee as well with the addition of a VFO. When I got back on HF last year after being on VHF and up for about thirteen years, I was really dismayed to find how much baggage I'd have to pay for if I wanted to buy a more modern rig. I was pleased, however, to discover the excellent value of the Ten-Tec Scout as a primarily CW rig.

In my opinion, the price points at which Yaecomwood et al. feel like offering equipment have become far too important in determining the entry level cost of this hobby. I sure do miss Heathkits, but they were doomed by simple economics. Automated manufacture just got too good to compete with.

Manufacturers will produce what's demanded. I wonder if there are any good ways to tilt that product mix back in the direction of encouraging more entry to the hobby. By the way, the Scout is a *great* rig for CW -- though I'm not recommending it as an SSB transmitter, mine has problems with audio feedback. On the other hand, any new WARC bands are just a $25 cartridge away.

There's an interesting "old" movie about a society that never
let anyone grow old.
Try renting the movie, "Logan's Run". But remember, getting old
is the inevitable result of not dying.

Source record: 237857

Many many years ago, we found that the Pride Electronics 100 watt CB Linear made a really nice HF CW amp - just sit it on a muffin fan, flip the switch to SSB to get some bias and keying delay, and you could get a nice clean 400 watts out on 40 meters with about 5-10 watts in.

I only tested a few samples, but they all worked just fine 80-10. I think that production run had philips/amperex transistors in them. Several different types of transistors were used over the production life of those amps, and I dunno how the others would behave, but it seems to me that it's worth testing. They should be plentiful still; at the height of the CB craze, the company was shipping 3,000 a month, and so were most of its competitors. They weren't an illegal product then.

BTW, in production, most of those units were tuned at 28 MHz with a Ten-Tec ham transceiver, to preserve the illusion.

Shawn, WHY oh WHY do you have to keep repeating the same
worn-out messages OVER and OVER and OVER again? It's getting old!
Let's move on to a new topic, please!

Re: Love CW or hate CW

Please take this garbage to E-mail. Everyone is TIRED of seeing the same
arguments repeated over and over and over again! It's getting VERY
stale now!

SCM>J. Duffy Beischel (gamma7@ix.netcom.com) wrote:
SCM>: I agree that speed is good when handling emergency traffic. Accuracy
SCM>: and the ability to get the message through is maybe more important.
SCM>: Having used about every digital method at one time or another, I have
SCM>: found that some digital methods fail when the singal drops below a
SCM>: certain level. This level also varies depending on the digital method
SCM>: being used. In virtually all methods, when the signal dropped off so
SCM>: that the digital method no longer worked, the signal was still strong
SCM>: enought that CW could have been perfectly readable.

SCM> Did you ever think that the digital modes you were using were
SCM>non-coherent BFSK at a data rate much higher then CW? If they were,
SCM>yes the digital will drop out faster then CW, becuase nc BFSK is the
SCM>same as OOK for error rate vs S/N. Since the singaling speed is higher,
SCM>the needed S/N is higher. Drop it down to OOK speeds and everything should
SCM>have been huncky doory(sp?).
SCM> By going to a coherent M-ary FSK with coding and time diversity, OOK
SCM>will not be able to touch it in harsh environment operation. In fact, just
SCM>adding coding and time diversity will bring nc BFSK past OOK if the error r
SCM>hasn't gotten to close to 50%.

SCM>: The other argument is the type of equipment needed. Digital requires
SCM>: more complex equipment and higher power. Digital cannot be decoded by
SCM>: the human ear. CW is a very basic form of digital communication that
SCM>: requires only the most basic equipment and a human ear can decode it.

SCM> Yes it is more complex to send and receive, but not by much. Let's
SCM>look at transmit first. A CW TX can be an amplified oscillator. Ok it's n
SCM>ideal, but some people use this to show how simple it can get. For nc BFSK
SCM>we just make two different oscillators. Yes, it's crude, but it works. Th
SCM>complexity is really not much more then the CW TX. We've added a duplicate
SCM>part of the system, and a digital interface to choose which one is used.
SCM>That's not bad.

SCM> What about RX? Well CW can be realy easy, but for good performance,
SCM>I don't think the average emergency worker will be using a crystal radio.
SCM>Good CW receivers can get quite complicated. For nc FSK we can convert dow
SCM>to an IF and just have filters feeding into a comparator. Hmmm, that's pre

SCM>simple, crude but simple. We can even do better by using a PLL and actuall
SCM>coherently locking onto the signal. Then integrate over mulitple wavelengt
SCM>and the S/N has gone up significantly. This isn't real complex.
SCM> As far as the computer goes, low power devices exist that can drive a
SCM>modem, keyboard and display, and remain robust. My personal choice is the
SCM>68HC11, but you may substitute another easily. If you were talking about T
SCM>power, not really. If the needed S/N is lower, then less power is required

You apparently misunderstood the question:

DD>>: Brian, that's not what he asked! He asked "is CW NECCESSARY to
DD>>: communicate on HF?" The answer is simple...NO, it is NOT!!!!
DD>>
DD>>The only thing "necessary" to communicate on HF is an HF radio, Drew.
DD>>What is your point??
DD>>Greg

DD>Absolutely correct! The guy asked "is CW necessary to communicate on HF?
DD>" I answered "NO< IT IS NOT!!!"

DD>No code needed; just an HF radio. I do quite well on 10-meters without
DD>any type of Morse capability.

You misunderstood Drew. Yes, you can communicate in SSB or FM or AM,
but CW is necessary when conditions are difficult or when you have a
sore throat, or if you are speech impaired or for a host of other
reasons. So yes, dear friend, CW is not just for fun, even though it is
as much fun and at times more fun than voice or RTTY.
SSTV is not NECESSARY for communication on HF, but it IS necessary
for those who want to send pictures.

SO it is all in how you read and understand what is intended by the
trick question, Drew!

BC>>Balderdash! You don't know what you are talking about.

DA> Nothing like a nice, thoughtful, pleasant, polite, well-reasoned
DA>reply...

I call 'em like I see 'em.

Folks have been sending the same "well reasoned" nonsense out in this
newsgroup on bith sides of the argument OVER and OVER again for weeks
now!

Re: Love CW or hate CW

Please take this garbage to E-mail. Everyone is TIRED of seeing the same
arguments repeated over and over and over again! It's getting VERY
stale now!

DA>>CW gets through when nothing else can. Now IF everyone had the fancy
DA>>gizmos that let you detect those inaudible TTY signals. As to SSB
DA>>it is no contest. CW is superior in seveal ways as has been demonstrated

DA> Hmmm... When I say that it's possible to communicate on HF without
DA>knowing CW, I'm regurgitating the same tired old arguments that
DA>everyone's seen for ages. When you say "CW gets through when nothing
DA>else can," what are you doing?

The same. That is why I have not posted such in the newsgroup for some
time now. People ARE tired of it.

Re: Love CW or hate CW

Please take this garbage to E-mail. Everyone is TIRED of seeing the same
arguments repeated over and over and over again! It's getting VERY
stale now!

DA> Second, this is irrelevant--notwithstanding CW's alleged superiority,
DA>it's still entirely possible to communicate on HF without using it.

But not to communicate on _CW_ on HF without it! What if you are deaf or
dumb? Then you need CW or RTTY etc.

DA>Even if I concede that SSB is a vastly inferior mode of communication,
DA>it is still effective in many situations, people can communicate with
DA>it, and you need not know CW to use it.

You think I didn't know that? What am I, chopped liver?

DA> Third, even if I buy the "CW gets through when nothing else can"
DA>cliche, that's its _only_ superiority. Speed? Ha! Even with all the

DA>Q-signals and other abbreviations, voice is vastly faster than CW. It
DA>also allows for inflectional variations which can't be duplicated with
DA>CW.

I agree.

DA> Fourth, it's been rather conclusively shown by others on this group
DA>that CW _isn't_ the be-all and end-all of weak-signal reliability, so
DA>that argument fizzles as well.

Read the message again. I said that most hams don't have those fancy
gizmos. I stand by that!

Please take this garbage to E-mail. Everyone is TIRED of seeing the same
arguments repeated over and over and over again! It's getting VERY
stale now!

Hi Mike,
I have the MFJ loop. Its been up about 1 year now, and has been working well. That is after I got it working! It quit about 20 min. after I put it up and after taking it down twice and having it work when it was down and quit when I put it back up, I took it apart, all the solder joint were cold joints (bad) I re-soldered everything, and dumped out the little bits of solder inside the plastic housing and put it back up. Its been working well for the past year. The control box was well built by the way. I don't like the placement of the buttons on the control box. It makes the operation awkward for me and my big hands in the location I have the box. But I can live with it. If you buy the MFJ get the better control box. You need all the help you can get tunning these small loops as they are quite sharp.

mike (slmusr03@MBnet.MB.CA) wrote:

: Hi Bill,

: 1) Starting off with CW is cheap. You don't have to spend thousands.

: It cost me about 5 bucks to build a QRP rig that uses CW mode, to be more
: specific the rig is known as the international 1/4 watter, built around the
: popular 740X series nand gates. Look at one of the most recent QST mags for
: details.

CW-only rigs are cheap and the performance is commensurate. On the other
hand, digital communcations is possible with the same radio with minor
modifications, with which one can really experiment with the SOTA.

: 2) Sometimes CW is the only way to get started into the HF domain.

Sad but true. It is the only real reason to learn Morse code because
most governments still require the individual to pass this skills test in
order to have access to the HF bands. After that, according to the
statistics, they will not likely use it again.

: This particular point actually is more important than point 1) above.
:

To emphasize, it is the only point.

: For those who are financially strapped, this is about the only way to get
: started into amateur radio in the HF bands. I simply don't have the cash
: for a 'ready made' amateur station. I do however, have the cash to build
: a home brew unit, which coincides with me having to learn CW, since that
: is the only mode available to me considering the type of rig I now have.

Nonesense! Considering that you have some data capabilities, your
statement seems somewhat odd. If you have no interest, that is another
matter, but to claim that CW is the only capability available to those
who are financially strapped is farfetched.

: 3) In bad conditions (noise), CW gets through where SSB or Packet doesn't !

: For those who say that the digital modes are far superior to CW, well, I
: have witnessed a demonstration where HF packet (a digital mode as far as
: I know) fell flat on it's face, where CW prevailed. As for other digital
: modes, sure they may be superior, but again, many of us simply do not have
: the money for that type of equipment.
:

Yes, HF Packet is a dog. It is not much good on HF because AX.25 is a protocal which depends on all the stations on the network to hear each other. As we all know, this is not the case. However, this is not the case with the TOR modes and Clover. There is no doubt, they are far superior to CW. To say otherwise is ignorance or bloodymindedness.

: 4) It's fun and challenging

: For those who like a challenge, CW is indeed a challenge. And it is a lot
: of fun. The more I listen to CW, the more I get hooked on it. There is no
: turning back. Please do not construe this as me being a 'fanatic'. I am
: not. I simply enjoy CW, that's all.

I hope that you continue to have fun. Unfortunately, it is not the case with most amateurs.

: 5) CW in some ways forces you to learn

: Because of the fact that I was forced to build my own rig, indirectly
: forces me to learn CW, as well as learn the theory and practical aspects
: of how to match my rig, transmission line, and antenna. I do not have the
: bell's and whistles found on a TS-450-SAT transceiver to do that. Once you
: have gained the experience, you will be very glad you did (I sure am). Now
: you have the know how to make your station as efficient as possible. Better
: yet, if your 'ready made' station experiences a problem, you now have a
: better understanding on how to cure the problem.

Pardon me? Forces to learn? All this attributable to CW? No doubt you have had to learn in order to build a CW transmitter, but you would have learned even more by using that as a building block and setting you sights even higher and built some else that gives you greater capabilities.

: That's all for now.

: Regards,

: Mike

>have a lot of inductance (i.e., only a few "turns").

Yup, I've gotten similar results... I put a few metal film resistors on our 3 GHz network analyzer in the lab. With leads of 1/4 to 1/2 inch, they measured relatively non-reactive to almost 100 MHz, so you're fine to at least 6 meters. Some of the resistors I measured were 2 watt size, not much difference. From looking at 'em, it looks like the lower R values (< about 300 ohms) are not spiral cut, so inductance isn't a big issue.

5499. THE URAL AWARD

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-27 00:00:00 UTC
From: Alex Prikhodko <root@pay.pssr.e-burg.su>
Message-ID: <306993ba@pay.pssr.e-burg.su>
Source record: 237875

THE URAL AWARD

The URAL award is issued by radio sports federation of Sverdlovsk
oblast and is available for all amateurs and swls for contacts with
(or heard from) different amateur radio stations located in Ural
mountains area of the Russia after January 1st, 1957.

Rules:

1. Applicants outside Russia using traditional modes (CW,SSB)
on traditional HF bands (1,8-3,5-7-14-21-28 MHz), located in Europe
and Asia should have 40 QSOs with the area including at least 10 QSOs
with Sverdlovsk oblast.
2. Applicants operating under rule 1 conditions located outside
Europe and Asia should have 20 QSOs with the area including at least
5 QSOs with Sverdlovsk oblast.
3. Applicants outside Russia using non-traditional modes (RTTY etc.)
or operating via satellites or operating on VHF bands (144 MHz and above)
or operating mobile (/M,/MM,/AM,/S) should have 5 QSOs with the area
and at least 1 QSO with Sverdlovsk oblast.
4. Contacts with oblasts CB,SV,PM,KN,OB,BA,UD may be counted for Ural
mountains area.Prefixes UA...UI/RA...RZ 9A, B, C, D, F, Q, R, S, T, W
and UA..UI/RA..RZ 4 W.
Stations of Sverdlovsk oblast SV have suffixes 9C, D.(before 1994 - 9E)
The log extract (no QSL cards required) and a fee of 10 IRC should
be sent to award manager, using address as follows:

RADIOCLUB
MALYSHEV ST. 33 - A
EKATERINBURG 620014

>why CW
>is a good skill to master

Gee! How can I let THAT one go by? ;-)

1. Because the ITU says so. And of course, ALL
international treaties must be followed without
question till hell freezes over.

2. Because the content of the communication is not
nearly as important as the method.

3. Because it's far easier to spend time building
fancy bronzed or wood-worked keys than to
actually learn anything about modern-day
forms of RF communication.

4. You enjoy reducing yourself to the level of a modem.
Why be human when you can be a machine?

5. CW get's ya more points when yer contestin', boy!
Ya wants more points, don't ya??

6. Because it's easy to build a CW transmitter and we
don't want to talk about receiver complexity anyway.

7. When armageddon hits, I sure as hell will
want to sit up that night and work DX!

8. ON and OFF is about all I understand anyway.

9. We can assign a number to your code speed.
If you're higher you're better. We all know the
written tests are a joke anyway.

10. Because bandwidth is about the ONLY
aspect of the hobby radio amateurs seek to
implement in moderation.

Flame away, boys! ;-))

: >Thanks,
: >
: >Mike, KQ4GP, mikecohe@ix.netcom.com
:
: Hi Mike,
: I have the MFJ loop. Its been up about 1 year now, and has been working well.
: That is after I got it working! It quit about 20 min. after I put it up and after
: taking it down twice and having it work when it was down and quit when I put it back
: up, I took it apart, all the solder joint were cold joints (bad) I re-soldered
: everything, and dumped out the little bits of solder inside the plastic housing and
: put it back up. Its been working well for the past year. The control box was well
: built by the way. I don't like the placement of the buttons on the control box. It
: makes the operation awkward for me and my big hands in the location I have the box.
: But I can live with it. If you buy the MFJ get the better control box. You need all
: the help you can get tunning these small loops as they are quite sharp.
: John Passaneau, WB8EIY, State College Pa.
:
I use the AEA Isoloop and have really been impressed with its
performance. I live in a community whose homeowners association frowns
on outside antennas so everything is in the attic. I have put a 20 meter
dipole in the attic before, but I also like operating on other bands as
well. If you have room for an outside antenna, that may be a preferred
way to go, but I have not been unhappy with the Isoloop in the attic.
Good luck and 73 Marc AA3JQ

5507. need help with TV RFI in audio gear

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-27 00:00:00 UTC
From: rorem@mana.eecs.uic.edu
Message-ID: <44c7r0$8h4@news.eecs.uic.edu>
Source record: 237883

Hi,

I'm helping someone who's getting TV RFI (60 Hz from the Ch 2 visual
signal) noise into their audio equipment. It does help when we shield
the audio cabling [both input & output] with aluminum foil running to
chassis ground. I found that Belden makes shielded power cables
to stop any possible RFI entering that way. Does anyone have
any ideas (or sources) for some type of premade braided (or foil)
shielding material that we could use to encase one or more audio cables in?
I found some copper foil made by 3M, but it seems rather narrow
(1" wide) making it difficult to get much wiring into. Also, there
is no drain wire attached - not a real big deal since we could solder
something. I guess we're looking for something that would look fairly
decent for a long term solution (short of building a screen booth!).

>Can anyone suggest a UK source for a 1.3GHz 50W Output power amp? Gain would
>have to be about 37dB.

Peter,

You will not find it in a single amplifier. There are 50W linears
around, for example by SSB-Electronics (as per 1989 they were
represented by Piper Commumications, Oxon, phone 0235 834328)
They will however require 1 to 10 W input.

from the 10 mW level you can get a Mitsubishi hybrid (small).
If you are into construction you can also parallel 4 hybrids (big) to
get 50W.

SB SPCL ARL ARLX058
ARLX058 HT saves ham's life

Amateur Radio has been credited with saving the life of a shooting victim.

On Monday, September 25, 40-year old Rory Clark, KD6RKL, of Citrus Heights, a Sacramento suburb, was shot while standing at a bank automatic teller machine. Using his hand-held transceiver, he called for help on a local repeater. The repeater owner and operator, Chris Huber, N6ICW, was listening and autopatched the call to 911, according to ARRL Sacramento Valley Public Information Officer John Arnot, KD6SSZ.

Huber helped Clark in passing information to the ''911'' operator about his location, condition, and suspects. This assistance, and the ability to contact a listening ham operator on the spot ''saved Rory's life,'' in the words of local authorities.

The story was covered by all three television network affiliate stations, which focused not only on the crime and victim, but also on Clark's ability to call for help with his hand-held.

Huber was interviewed by two of the three TV stations. One of the TV stations interviewed a sales clerk at the local Amateur Radio retail outlet, The Radio Place, about the positive aspects of ham radio. The taped conversation between Clark, Huber, and the ''911'' operator was played on the news broadcasts.

Local hams rushed to his and his family's assistance, and continue to be of support, Arnot said. Among them was Jim Rosima, KD6SSW, who took Clark's family to the hospital after the incident.

Rory Clark is in critical condition but is expected to live. He was shot once with a rifle from behind. Authorities attribute his survival to his call for help via ham radio. He is in Sutter

Roseville Hospital.

Yes, anything, as long as it keeps them off your bands, right?

>Coders have put more time and energy into winning their licenses.

In fact, they've put more time into it than necessary. Why should we
continue to repeat the mistakes of the past?

>On average, they have more of a _stake_ in their licenses.

More of a stake in their license, yes, but no more of a stake in the
bands. Everyone who uses the bands has the same stake in their protection.

>the higher average level is CAUSED by the code test.
>It is caused by a higher demonstrated commitment.
>It is caused by them being bigger stakeholders.

Experience is perhaps a better prerequisite. We need to analyze
the problems in amateur radio, and devise solutions for those problems
directly. The problem is not that some operators don't know code. If it
were, then requiring it *would* be the logical solution. The problem may be
crowding, but crowding in and of itself is self limiting. The real
problem is when operators transmit on top of one another, or splatter their
signal across the band - this is what has happened to 11 meters, and this
is what we all want to prevent on the amateur bands.

We must ask ourselves are these sorts of activities accidental, committed
by an inexperienced operator who doesn't know enough to be on the band, or
are they committed intentionally by someone who has no regard for his
fellow amateurs (or by unlicensed operators). In any case, there is
little correlation between irresponsible operating practices, and an
operator's CW ability. There may be a stronger correlation with an
operator's length of experience as a ham - but there are even exceptions
to this.

It has been suggested that we keep testing for Morse code ability because
we don't have a better method in place. A poor method is still a poor
method. We should be able to do better than that. If there is a better
way, we should use it, not continue to employ a poor method because it

might get worse if we don't.

What we want to avoid is getting to the point where a guy goes into Radio Shack, buys an amateur radio, and then sends away for his license (or not). Well we're certainly not there, and I don't expect we ever will be. But by the same token I think perhaps some people take things a little *too* seriously.

Amateur radio is a service, and a hobby, and for most it is the latter. This isn't the military, it isn't the commercial broadcast band, and the responsibilities of government, business, or police agencies do not rest upon it. It is important to *us* that we maintain it as a reliable means of communicating, and that we maintain control of it. But in relation to the larger scheme of things in life.....

5517. GB2RS News 1st October 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-28 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <812340732snx@llondel.demon.co.uk>
Source record: 237693
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 1st of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

After taking advice from the Membership Liaison Committee Working Group, instituted by the Chairman of MLC, Peter Shepherd, G4EJP, to look into the matter of the Emergency Communications Officer, the President has issued the following statement:

A Presidential Appeal Board has been set up to look into all the facts surrounding this problem, and Mr Greg Reilly-Cooper, G0MAM, will be invited to attend this board. The board will consist of Mr John Hall, G3KVA, the Company Secretary; Mr Richard Horton, G4AOJ, Chairman of the Executive Committee and the Honorary Treasurer; and Mr Neil Lasher, G6HIU, Chairman of the MLC Working Group.

The Appeal Board will have full authority to decide the issue, and will meet shortly. This has been agreed with Mr Greg Reilly-Cooper. In the interim, Greg Reilly-Cooper will continue to act in the role of ECO until the Appeal Board makes its report. He will report direct to the President during this period.

An RSGB Open Forum Meeting will be held at the Highlands Regional Council local authority emergency operations centre, off Macintosh Road, in Inverness, on Saturday the 28th of October. The meeting will be open to all those with an interest in amateur radio. Further details may be obtained from the RSGB Liaison Officer, Mrs Elaine Shread, on 01466 780739.

Ian Smith, GI0VSG, is running in the Dublin Marathon in order to raise funds for the RAIBC, which is a registered charity. If you would like to sponsor him, please ring 01232 471370 for a sponsor form.

Now a note for your diary: the Martlesham Radio Society will be holding a Microwave Round Table at the BT Laboratories, near Ipswich in Suffolk on Sunday the 12th of November. For BT Labs' security reasons, all access is by ticket only, so if you would like to attend please write to Roy Smith, G0RRC, listing the names of all persons attending. Please enclose an S.A.S.E. Roy's address is correct in the current RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Sable Island, a Canadian group will sign CY0TP between the 30th of September and 10th of October. Activity will be on all bands and modes

including EME, satellite and 6 metres.

From Ceuta and Melilla, EG9A will be active from Friday the 6th to Sunday the 8th of October on all bands 40 to 10 metres.

And from Antarctica, Ken, G0NKZ, will be active from early October until the end of January next year. His callsign is not yet known, but look for a new VP8 callsign around 14150 - 14200 or 7080 to 7090 kHz.

Now news of some special event stations:

GB2NM, commemorating the work of radio pioneer Gerald Marcuse, G2NM, is on the air from the Guildhall of Chichester District Museum today, Sunday the 1st of October, on 80 and 2 metres. Irene, widow of Gerald Marcuse, will be participating from 2.30pm.

The callsign GB125BRC will be operated from Paddock Wood for a period of 28 days starting today, Sunday the 1st of October. The station is celebrating the 125th anniversary of the British Red Cross.

Next the Rally News:

The Blackwood and District Amateur Radio Society rally is taking place today, Sunday the 1st of October, at the Community College, Oakdale, near Blackwood in Gwent. The doors open at 10.30am and talk-in is on 2 metres channel S22.

Also today, the Great Lumley Amateur Radio Rally is being held at the community centre in Great Lumley, near Chester-le-Street in County Durham. Doors open at 11.00am, or 10.30am for disabled visitors, and children accompanied by an adult will be admitted free.

Next Sunday, the 8th of October, the Armagh and District Amateur Radio Club, in conjunction with the Dundalk Radio Club, will be staging the All-Ireland International Radio and Hobbies Exhibition. The venue is the Fairways Hotel, Dublin Road, Dundalk, in the Republic of Ireland. Contact John Ashe, GI8RLE, on 01762 870423 for more details.

Also on the 8th of October, the "Computercations 95" Computer and Radio Rally will take place at the Hillhead Campsite, Dartmouth Road, Brixham, in Devon. In addition to trade stands and a car boot sale, there will be a special event demonstration station, and a professional flight simulator. Talk-in will be on 2 metres channel S22 and further details may be obtained by phoning 01803 522216.

The Kidderminster and District Amateur Radio Society rally will take place on the 8th of October. For further details, contact G8JTL on 01384 894019.

And an Amateur Radio Caravan and Camping Club rally will take place at Elkington near Welford in Northamptonshire from Friday the 13th until Sunday the 15th of October. For further details ring 01462 811208.

The 2 metre repeater GB3HS, and the 70 centimetre voice repeater GB3HU, which are located near Hull, are both temporarily off the air at present due to an act of vandalism.

The Nottingham Amateur TV Repeater GB3NV has been off the air since the 11th of September. It will remain off the air until a new site has been found.

It was hoped to put the Leicestershire Amateur TV Repeater, GB3GV, back into service on the 23rd of September. The repeater had been off the air since January and since then the transmitter section has been rebuilt.

Now for the HF contest news:

The RSGB 21 and 28 MHz SSB contest is taking place today, Sunday the 1st of October, from 0700 to 1900 UTC. The rules are on page 80 of the June RadCom.

The Belgian ON SSB Contest is also taking place today, the 1st, from 0700 to 1100 UTC. Brief rules can be found on page 24 of the September RadCom.

On Friday the 6th of October, the final session of the Slow CW Cumulative Contest takes place. The rules are in the August RadCom.

And on Saturday the 7th of October, the European Sprint SSB contest takes place between 1500 and 1859 UTC. Brief rules are on page 24 of the October RadCom.

Next some VHF contest news:

The First Session of the 1.3 and 2.3 GHz Cumulative Contest takes place on Tuesday the 3rd of October, between 1930 and 2200 local time. The rules are in the June issue of RadCom.

And next weekend, the 7th and 8th of October, a series of UHF and Microwave contests take place, with contest activity on all bands from 432 MHz to 24 GHz. The rules can be found in the June RadCom.

And now the solar factual data:

The period from the 18th to the 24th of September saw solar activity at very low levels and the geomagnetic field at quiet levels. Sunspot numbers increased from zero on the 18th to 50 by the 23rd, but then declined to 43 on the 24th. The mean for the period was 25. Solar flux levels increased slightly in response to the increase in sunspots, but only by 4 units. Levels increased from 72 units on the 18th to 76, but fell back to 74 by the end of the period. The average was 74 units. No solar flares of any significance were recorded. The electron fluence declined from high levels to moderate levels early in the period. The X-Ray flux increased slightly from A2.9 units on the 18th to A7.0, before declining to A1.5 units by the 24th. The average was A4.2 units.

Geomagnetic conditions were quiet every day except for the 23rd, which was unsettled, with an Ap index of 12 units. An Ap index of between zero

and 10 is considered to be 'quiet levels'. The average was Ap 7 units. The aa indices, as supplied by the British Geological Survey for the period from the 12th to the 18th of September, saw an increase from 22.8 nanoTeslas to 40.9 nanoTeslas by the 15th. Levels then declined sharply to only 7.5 nanoTeslas by the 18th. The average for the period was 22.1 nanoTeslas, about K3.

I'll repeat the figures : spots - 25, flux - 74, Ap index - 7, X-Ray flux - A4.2.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 15th to the 21st of September, increased from 4.7MHz on the 15th to 7.2MHz by the 20th, with an average of 6.1MHz. Also, the darkness hour lows improved over the period from 2.7MHz on the 15th to 3.5MHz by the 21st, with an average of 2.9MHz. The daytime highs took place between 1800 and 2000 hours, except on the 15th when they were at 1000 hours. The darkness hour lows took place between 0200 and 0500 hours every day.

I'll repeat the figures: highs - 6.1MHz, lows - 2.9MHz.

And lastly the solar forecast.

This week solar activity could be at low levels for the next few days with the possibility of an occasional C class solar flare. From midweek, as the quiet side of the sun looks our way, solar activity will decline to very low levels. Solar flux is expected to decline to the high 60s. Geomagnetic activity is expected to be very quiet for the next couple of days before increasing to active or sub-storm levels for the remainder of the week. This expected higher level of activity is due to a well-positioned recurring coronal hole. Ionospheric MUFs for the south during daylight hours could be up to 22MHz for the next day or so, but are then expected to decline and could be as low as 15MHz on the more unsettled days. The darkness hour lows are also expected to decline to about 9MHz later in the week.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Mike and G7 Victor Victor series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Lima series.

Michael,

You should be proud of yourself. Obviously the desire to operate on the HF bands by getting an amateur ticket was important enough to you that the learning the code, or the technical and operational testing material was not a stumbling block. Good for you! Seriously, great job! Welcome to bands! I only hope that you continue your training, learning and pursuit of knowledge regarding radio/communications and technical advancement. Many people simply cram for the testing and stagnate in the hobby and their own personal advancement of it. Not everyone you understand, but certainly a large number of hams never advance their radio-knowledge or operating skills much beyond the test requirements.

Ya know, I would bet that if being able to prove that you could jump out of a 50 gallon drum without touching the sides or using your arms was a requirement you would have starting working on it. This is a commendable attitude. No kidding! On the other hand it's OK to wonder why jumping out of that drum was relevant to your getting your ham ticket. Obviously, you'll get more respect if you question the validity of this requirement AFTER you've achieved the ability to do it, but still, it's OK to issue the challenge.

The CW requirement is a little like jumping out of that drum. It's good to know CW, and even fun (yes even I use it and enjoy it) but the necessity of testing the skill is the question. What exactly does it prove? IMHO it proves only that you are persistent and determined enough not to let a stumbling block, no matter how irrelevant stand in the way of getting your ticket.

Does knowledge of CW advance the technical aspects of our hobby? No.

Does increasing the proficiency of your CW skill ensure correct operating practices? No.

Does improving your CW receive speed mean you are better equipped to ?enhance international good will?? No.

Does the knowledge of CW enhance the ability of a person to communicate under adverse conditions? Well sure, but so would a working knowledge of many other operating modes. (some are even MORE reliable than CW!) Obviously the most ?valuable ham? (whatever that means) would be one that is well versed in the largest variety of communication and technical skills. So why single out CW, why not require hams to be competent in ALL modes of communication? Wholy Cow! Hardly anyone would get a ticket or advance if they had to prove they understood and were competent or in the process of mastering ALL of the communication modes we operate. Ah, exactly. Every other aspect of the ham radio tests prove only that you?ve had SOME extremely limited exposure to other communication modes. Except CW. You MUST not only learn it, but increase your proficiency in order to be granted additional privileges. It stands alone as the primary screening metric for advancement. My contention is, it?s simply the wrong one.

Knowing CW proves little regarding your abilities or capabilities except that you are able and capable of learning CW. So what! Maybe it would be kool if we required hams to actually understand how bipolar transistors function. Think they already do? Ah, many many don?t. The tests don?t require you to understand it. Irrelevant? I don?t think so. One of the privileges our ham tickets provide us is the right to legally service or modify our own transmitting equipment. It seems totally relevant that we be able to prove we are capable and increasing our knowledge of how to do these modifications and remain within the operational requirements of the equipment and license.

Well, I?ll never modify or service my own rig, why should I have to know how a stupid transistor works? Well, with today?s license requirements you don?t, but this is exactly the argument the anti-code testers (or maybe we should call them pro-nocoders:) are offering regarding the code.

So should we drop the code requirement? Well, to be ?fair? we either need to drop it or increase the testing requirements to encompass proven advancement of the OTHER necessary skills and knowledge consistent with the privileges our license allows.

If I favor increasing the scope of the testing folks call me an elitist. If I favor dropping the code they call me lazy or not dedicated enough. The point is as it stands, it?s already an ?elitist? test and the presently accomplished elitists scream bloody murder if you even suggest making it easier for more folks to get on board.

-be (ka1jy@ka1jy.ampr.org)

FYI. 16 years ago when I got my first ticket and started upgrading I was in 100% agreement with CW testing. It keeps out the bozos that have no respect for the hobby, I thought.... Ya know what? I was wrong.

Hay Bill! Whadaya mean Sysop? Are you reading this stuff on a BBS? Gees, they still have those things? What a drag if that's the case. Man, i thought those silly things died out years ago.

I have a suggestion. Get a news reader. There are a number of good ones out there and most will allow you to screen out keywords up front. Heck around here this group gets posted for the local packet users and even they are using nntp client readers.

For higher power resistors good to fairly high frequency, you might want to check out Caddock's MP850 line, and related ones. Properly heat sunk, these little TO-220-style case units can dissipate 50 watts. The biggest parasitic I found was capacitance to the heatsink, and their newer line I believe has some additional isolation between the back of the case and the heat sink. It may not really reduce the capacitance much, but it could help a little. I haven't gotten any to check them out. From memory, the 100 ohm ones I got were just a couple pF, as I recall, and that appeared to be distributed across the element, so if one side is grounded, the effective is even less. The part can be mounted in a "window" cut in 1/16-inch circuit board for microstrip-type connection to the leads, with the heatsink face very close to flush with the back side of the board.

Your choice, of course, but you certainly could drag home a castoff.
The place where I work just tossed 50 VT-52s and I didn't even bother
to drag one home. But they were available, just as I'm sure your company
tosses obsolescent equipment that would still be useable for amateur
purposes.

>Gary, I do understand that there are superior modes to packet and CW, however

>
>The bottom line for me is that, I am forced to improvise with all my ham
>related items, whether it be stringing up an antenna with old rusty nails,
>or building a cheap but working transmitter on an aspenite board that I
>had to drill holes into (an improvised version of a perforated circuit
>board). If it works, it works.

That's fine, I'm a strong advocate of homebrew. The point is, however,
that homebrewing digital transmitters and TUs simply isn't markedly more
difficult or expensive than homebrewing Morse equipment. Once you put
the problem of display aside using castoffs, the rest is very straight
forward. The spirit of amateur radio should be very much one of
improvisation, whatever the mode.

>Just out of curiousity, what bands do you spend most of your time on,
>and what modes do you use ? What kind of equipment are you running ?

I operate VHF through S-band using a FT736R or an IC-202 driving a series of transverters (Microwave Modules, SSB Electronics, and Down East Microwave). I'm in the process of installing a surplus SA 5 meter dish for the X and Ku bands, IE all the junk is stacked in the backyard waiting for me to get around to it. I also use UHF FM, operating a repeater made of GE MVP castoffs on 70 cm, located on a 1000 foot broadcast tower, and using various HTs and mobile equipment, modified commerical and amateur. I'm also setup for packet at 1200 baud, 9600 baud, and 56kb. I've got az-al steerable arrays on a 70 foot tower for satellite and terrestrial use.

On HF I run a IC-735 and a wire dipole (used to have a tribander but took it down to put up the satellite arrays) or a low 500 foot horizontal loop. I have a MLA-2500 amplifier, but rarely use it. While I occasionally operate on all the HF bands (I've got a microphone around here somewhere), I've tended to stick to the 40, 30, and 20 meter digital subbands the last few years. I've had a wide assortment of the commercial digital TUs, from HAL equipment to a PK-232 to various homebrew units. Currently I'm working with the Analog Devices DSP kit as a homebrew TU (still buggy). I've got a HAL P-38 on order, and if the blankety-blank thing ever shows up I'll give it a try. (I have a little 386SX mini-tower system dedicated to amateur radio projects.)

That's what I'm currently running, though half of it isn't operational at any given time, being modified or temporarily displaced, but I've got a shed full of homebrew gear of various kinds for various bands and modes that I've used at one time or another, everything from a pair of push pull 211s on a pine board for 40 meters to a 3 chip homebrew VHF HT.

My pride and joy right now is only distantly related to amateur radio. I've setup a full CAD system based on a 100 MHz 486 system. I've got mechancial and schematic capture packages, PCB layout and routing packages, and circuit simulators including SPICE and ARRL Radio Designer. I'm using that to work on a 220 MHz transverter design I've been kicking around. I'm still looking for a suitable linear power brick to go from the 10 mW level to the 10-20 watt range for that project if anyone knows of such a device, or cascadable pair. I've been looking at CATV trunk hybrids, but haven't found just the right thing yet. I want to avoid discrete amplifiers if possible.

Besides all that, I've got an old Sun workstation and two PCs running flavors of Unix networked and dedicated to activities here on the net, and another experimental PC stuffed with various bits and pieces that change near daily, including most recently a TMS320C25 based sound card that may become a HF modem.

As you might guess, I tend to tinker more than operate. I'm more fascinated by the technology than by operating contests or chasing Dx. I spend a lot of time in the workshop, where I've got a pretty good assortment of test equipment, sweepers, spectrum analyzers, scopes, service monitors, etc. I've even got a lathe and a mill

setup for mechanical work.

Now an amateur certainly doesn't *need* all that stuff. I've accumulated things over more than 30 years of hamming, and tend to never throw anything away. I've done plenty of interesting things with a tiny subset of all that junk, but it's neat to have the right tool readily at hand for nearly any project. Like many people, I'm as fascinated by the tools, and the knowledge and skills needed to use them, as I am by the projects they're used to build, or the operating they're designed to accomplish. Frankly, I look at operating more as an on air test bed than as an end in itself. I often go for weeks with my only on air activity being chatting on the "experimenter's intercom", the UHF repeater, while working on some project (or three, I tend to have several going at once, and push them aside or hand them off to others to finish after I get the prototype proof of concept working). It's the ideas that matter.

Gary

Gary,
Your regular postings in the various rec.radio.amateur newsgroups have always been well woth reading. They have been factual and relevent to the thread. Often they have been worth printing out and saving. But I think this time you let your halo slip a little.

It is a very long step from the early writings of Claude Shannon, in BSTJ and elsewhere, to the present day status of modulation and coding theory. The subject is widely recognised as a domain for the mathematical specialist in which many professional EEs (including me) tread with care and respect. To even begin wrestling with the subject requires a wide command of mathematical techniques, whose foundations are not laid until the first and second years of a BSEE course.

Amongst the "practical people", some of the reults of modulation and coding theory are treated with suspicion, because they are often based (but not always it is true) on the assumption that interference o is due to additive gaussian noise. Although to our utter amazement, this assumption has been found to be realistic for the space-to-Earth link, anyone who who has operated an HF rig for a short period of time will know that this assumption is patently untrue for a high frequency communications link. Many coding schemes are designed to bring robustness to communications in a channel for which the statistics if the interference and "drop-outs" are known. If there is a mathematical theory of QRM please direct me to the reference; I would be interested to read it.

There is also a second issue at stake. Widesparead, uncoordinated, initiatives in applying a plethora of diverse modulation and coding schemes to hamradio communication would not only disintegrate the unity of the hobby, they would also attract the disapproval of many radio reegulatory Administrations, who would fear loss of control of the aether.

But more. The tone of your posting goes on to suggest that you would prefer to turn the hobby into an even smaller and elite club than simply an association of "ye olde pharttes who pound ye brass". Now nothing less than a PhD in Information theory would suffice to get a licence.

Please correct me if I have got it wrong somewhere along the line.

Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:
http://www.oakland.edu/barc/ham-more.html

The show airs LIVE at 6:00pm ET, 2200utc, Sundays on the Talk
America Radio Network in over 55 cities.
The show also airs on WWCR shortwave, 7.435mhz, tape delayed,
Monday at midnight ET (0400utc), and again at 5:00am ET (0900utc), and
Saturdays at noon ET (1600utc) on 12.160.

5532. Remembering a 1st QSO

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-28 00:00:00 UTC
From: slay@netcom.com
Message-ID: <slayDFMyKE.LDx@netcom.com>
Source record: 237708
Cross-posted to: aus.radio.amateur.misc,rec.radio.amateur.misc,aus.radio.amateur.wicen

The other evening, I received a most surprising phone call. An Australian Ham called and said that he had spent the last 2-3 years trying to find me just to say "thanks" for having taken the time to give him his first CW QSO almost 4 years ago. He asked if I remembered our QSO and I actually replied - "My God, you must be VK2GPN". That CW QSO was one of the most memorable of my own 32 year ham career. It had reminded me of my own first tentative steps as a Ham newcomer.

Around midnite on a November '91 evening, I had already been living in Japan for quite a number of years and was tuning the low end of 20m looking for some DX. I found this station calling CQ at about 3-4 wpm around 14020 KHz and knew right away that he was a "fish out of water". Over the next 90 minutes, Tony (then VK2GPN) overcame his nervousness and his code speed went from being very erratic to being a much smoother (or exhausted?) 10-12 wpm.

Although Tony had made some SSB QSOs, this was his first CW QSO and his first DX on CW as well. Yep, even a 7J1 (JA) is DX to some people. ;-)

Anyway, he copied my Tokyo address, no mean feat mind you, and sent me a letter and photo. I replied with my own letter and one of those nifty "FIRST QSO" certificates that are (were?) availble from the ARRL. Not long thereafter, I moved back to the California and later to Portland, Oregon.

Well, when Tony, an electrical worker by trade as I recall, telephoned me the other evening it was quite a pleasant surprise. He mentioned that for over two years he had telephoned (from his home, not an office phone) to several places in Japan and the USA trying to find me. He told me that his only reason for calling was to say "Thank You" for taking the time to work him that November evening. He said he had almost "given up" on Ham radio thinking that almost all hams (incl. DXers) ever want to do is exchange name, QTH, and RST. This QSO had been his first chance to have a real ragchew.

Tony is now licensed as VK2MS living near Sydney hoping to get back on the air in the coming months. Personally, I'd love to talk to him again because that long QSO back in 1991 has been a reminder to me many times since about how magical Ham Radio really is. The expression "a stranger is just a friend you haven't met yet" is never more true than in Ham Radio. It's one of the things that make me so proud of this hobby.

Anyway, Tony's call just made my whole day (week/month?). In some ways, his efforts to track me down were not dissimilar to the tenacity with which he "stuck to it" to make that original CW QSO. In many

respects, his nervousness and excitement at making a first QSO was very thrilling to me because it brought back to me the memories of my own first awkward steps on the air as a novice so many, many years ago.

This is probably a boring story to most (all?) of you, but I was just so touched and thrilled by it that I had to dash off this message. Thanks for taking the time to read it.

Looking at modern equipment, this will be less likly with time. It
used to be you just turned the damn thing on and off, but modern equipment
may not come up in a partially usable state. Combine in integration of
devices and the act of trasnmitting Morse code via CW is getting really tough
without rebuilding the device from scratch.

You might try Jameco or JDR Microelectronics. It is highly recommended that you get rid of the MF10. It actually degrades performance in a TNC-2. For info on this: ftp.tapr.org in /tapr/software_lib/tnc/tncdocs.exe.

*** FOR PUBLIC RELEASE TO THE ENTIRE AMATEUR RADIO MEDIA ***

KJ7MU is starting a new award program to encourage activity on all bands.
This award is issued to anyone who works at least 100 telephone area codes
on any band and any mode.

For more information on the NPACC, please refer to the URL:

http://www.goodnet.com/`rec/npacc

Attn Media (Newsline, Ham Radio & More, etc.) you may give out my e-mail
address (rec@goodnet.com) for listeners who want more information, they
will get a reply with my e-mail address.

Only contacts made after January 1, 1996 are elegible. I hope this is
plenty of lead time.

Doug,
Belden and an array of others make cables with overall braid or foil, with or without drain wires. You can also get cable with wire pairs individually shielded and an overall shield covering the whole bundle. You might try the latter to isolate the signal ground from the chassis ground. If nothing else, you can put the individual audio cables through some copper braid scavenged from some fat coax. BTW I have some 3M copper tape at work 2" wide. Since the adhesive is conductive, you can put as many pieces in parallel as you want. You can also wrap the cables like you would with electrical tape. It's solderable too. Hope this helps. As far as sources are concerned, try Newark or Digikey.

This is largely irrelevant to the argument. Big difference between being ABLE to learn code and being REQUIRED to learn it as a condition of obtaining a license.

I'll say it again: I passed my code test, I know the code, I have the ability, etc., etc., etc. But I fail to see any reason why knowledge of Morse should be a required testing element for the purposes of obtaining any class of amateur radio license in 1995. That is why I will continue to fight for abolishment of this outdated requirement and will work to convince others to do the same.

Message-ID: <34485.11.uupcb@totrbbs.radio.org>
Source record: 237717

BC> Please take this garbage to E-mail. Everyone is TIRED of seeing the
BC> same arguments repeated over and over and over again! It's getting VERY
BC> stale now!

I couldn't agree more. I search through this conference and find
myself trying to skip all of the threads arguing the merits of both
sides. What does this give me, a packet full of comments on C.W. that
waste's my time and the Sysop's also.

SUGGESTION:

Anyone that has an E-Mail address for the ARRL, where
concerned folks can send their suggestions pertaining to what proposals
the league should pursue, should post it. All of those with opinions
on the matter should then voice their concerns with the ARRL. VIA
E-MAIL! I suggest this for two reasons.

1.) We can continue to debate this issue, within this
conference, until the cow's come home and it will still remain
un-solved.

2.) The only way the community can ever make a change to the
current rules governing ham radio is with the support of the
ARRL. If you do not agree with this then take up your issue with
the FCC directly and try and get results. The chances of the FCC
policy makers reading this forum, in order to find some sort of
guidance concerning future policy, is very slim.

I feel that this is a reasonable request. I also feel
that anyone with the intellect to design and build a Yagi antenna or
perform a mod on various radio's would consider this reasonable as well.

If you need a bit of humor, I've even heard a CQ (albeit very slow CW)
by changing the speed of the engine on a light plane.
You could do the same with a car in neutral as a gag demo.

My father spent 1925-1935 in Toronto Canada and flew as a bush pilot.
He was consistently surprised at how many loggers new rudimentary morse
and could signal him using flashlights.

A friend of mine used to send morse on bongo drums during jam
sessions... It took a few minutes to get used to <low drum for dah>
<high drum for dit> but it was copyable.

Anybody in the audience who could read morse got a giggle out of it.

Hello Geoff,

>In the United States, which was the country in question, it is illegal to
>modify equipment to transmit out of band.

Surely it is not illegal to increase the transmit range if you want
for example to use with a transverter.

>Several times the FCC has fined ham dealers for modifying or
>offering to modify ham equipment to transmit out of band.

Surely only if this was obviously done to sell it to non-ham users.

>While it is legal for a ham in the US to build a radio that transmits out
>of band (as long as it also transmits in band), modifing one a factory built
>one for out of band transmission has been interpreted as evidence of doing so.

We all know, that legislation and court ruling is not always related
to logic and justice, however, in a country where carrying a gun generally
seems not to be regarded as evidence for murder this seems hard to believe.

>Most transmitters are limited to transmission in the
>US ham bands. While most HF TRX are easily modifiable, they are not
>sold that way.

Well, I have yet to see a HF radio that can be customized such that
it transmits only within ham bands. I can also reassure you, that
my Ten Tec Scout 555, purchased *in the States*, transmits out of band,
in particular in a portion below 10 m, normally occupied by (illegal?)
CB'ers.

5550. Help, Alinco DJ-580T 440 side acting up.

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-28 00:00:00 UTC
From: david_b3@sfov1.verifone.com
Message-ID: <1995Sep28.215449.4385@sfov1.verifone.com>
Source record: 237726

When I turned on my Alinco DJ-580T handy talkie today, it would not receive or send on 440. I couldn't bring up any of the local repeaters, and as I scanned the settings, there was no activity on any of them, which was unusual, because it was early evening. One of the 440 machines is usually linked to a 2M repeater, and the 2M side was very busy, and on the 440 repeater, nothing.

I left the HT on for a while, turned it off for an hour, and then came back to it, and everything was back to normal.

I can't imagine that I pressed any buttons that locked out the 440, since I could read the display and scroll through the stored frequencies. It sounds like something's a little flaky.

Anybody experienced something similar with their Alinco DJ-580T? Any thoughts on what might be causing this?

DX Bulletin 50 ARLD050
From ARRL Headquarters
Newington CT September 28, 1995
To all radio amateurs

SB DX ARL ARLD050
ARLD050 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

MYANMAR, XZ. XZ1X is now active from Yangon with Kan, JA1BK, and Martti, OH2BH, the operators. They are expected to be there two more days. The Tokyo PacketCluster network has a spot listed for them on 14195 kHz.

UGANDA, 5X. Paul, 5X4F, now has a 160 meter antenna and is active daily at 0300z on 1831 kHz with 100 watts. He has also been on 3501 kHz at 0030z, 7001 kHz at 0300z, 10101 kHz at 0122z and either 21205 or 21240 kHz SSB at 1300z or 1930z. QSL via KB4EKY.

CHINA, BY. During the Beijing International DX Convention, October 13 to 16, BT1DX will be on the air from the convention hotel. BT1X will be the DXpedition station operating from the Great Wall on Sunday, October 15.

THE GAMBIA, C5. Gary, C53HG reports he will try to be active on 80 and 160 meters this Fall and Winter.

MONACO, 3A. John, K1VWL, will be QRV November 21 to 28 and plans to be in the CQWW Contest. Outside contest hours, try 1824/1828, 3523, 7023, 10105, 14005 and 18070 kHz.

RWANDA, 9X. Mark, 9X/ON4WW, will be doing low band work on Fridays and Saturdays. At 2330z, try 1830 kHz and at 2335 try 3501 kHz. At 0200z, try 1830 kHz and at 0205z try 3501 kHz. QSL via ON5NT.

SOUTH COOK ISLANDS, ZK1. Bob, K6GKU, should wrap up his ZK1PNX operations from Rarotonga Island, IOTA OC-013, on September 30. Besides CW and SSB on 80, 40, 20 and 17 meters, he also tries RS-12

Mode K. An easy snag is on 14190 kHz around 0405z and 14260 kHz around 0215z. QSL via K6GKU.

CHAD, TT8. TT8NU is active almost every day on 18070 kHz between 1900 and 2100z. QSL via F6FNU.

CAYMAN ISLANDS, ZF. ZF2JI will be active during the CQWW SSB Contest from Grand Cayman Island. QSL via KG6AR.

GRENADA, J3. W8KKF/J37K, WA8LOW/J37L, K9AJ/J3J, W9IXX/J3X, WB8GEX/J3K, WD8ATP/J3Z, KA9RHK/J3Y, V44KAO and perhaps others will operate J3A in the CQWW SSB Contest. Before and after the contest they will try to fill as many band/mode needs possible. QSL individuals via their home calls. QSL J3A via WA8LOW.

QSL NOTES. QSL TY8G via LA8G, PO Box 5626, N-7002 Trondheim, Norway.

SABLE ISLAND, CY0. Don't forget that this 10 day operation should start this weekend.

I have a couple of the 21-402s myself. The service manual was only
a few dollars from Tandy National Parts. I discovered exactly what

Jeffy describes. The synth chip is intended for cordless telephone
use, it has several channel select inputs that address a ROM
look-up table for receive and transmit frequencies. A rotary
switch and a handful of diodes are used to generate the input
binary channel select data. Simply changing the reference rock
is not practical as described above. However, you *might* be
able to use one of the newer, serial programmed Motorola PLL
chips to replace the synthesizer, though you'd also need
a microcontroller to program the synth then.

5556. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.6V76BD1w165w@GRAFex.sbay.org>
Source record: 237732
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

From: server@GRAFex.sbay.org
Date: Thu, 28 Sep 95 23:15:16 PDT
Message-ID: <gate.6V76BD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

>feedback. On the other hand, any new WARC bands are just a $25 cartridge away.

Unfortunately, every band is a $25 cartridge away, which makes the Scout
almost as expensive as other low end full coverage alternatives, and less
convienent to use, once you load it up.

But on to the main topic, expensive rigs. If you look at the value of
the dollar in the 1960s compared to today, today's rigs don't look that
expensive. In 1964, the B&W-6100, the first amateur synthesized SSB HF
transmitter, cost $895. That's $7160 in 1995 dollars, and you'd still
need to buy a receiver. An IC-781 costs less today, and does much more.
Other rigs are even better values. An entry level HF transceiver today
can be had for $999 (the new Alinco), and that's only $125 in 1964
dollars. Now in 1964 you couldn't buy something like the Alinco at
any price, much less for $125. The best deal in the 1960s was the
Galaxy V Mk II, and it sold for around $495. That's $3960 in today's
dollars.

Before you moan too much about amateur gear prices, look at what's
happened to the price of a house or a car today compared to the old
days. A $32,000 house then costs $250,000 now, a $2600 car then costs
$37,000 now, etc. At least the radios have *improved* while their
prices have gone up, a house is still just a house.

FSK doesn't work as well for the weak signal work that characterizes
QRP. Plus, he was talking about "10 reasons" to tell his students.
The fact that *he* has a computer doesn't mean that *they* do.

[snip]
>Now Clover requires a $399 proprietary bit of hardware, but that's
>about the same cost as a PK-232, which is horribly inferior, so there's

There's a bit of circular reasoning here. Clover requires $399
hardware and a computer and a transmitter and receiver.
CW requires only a key and a cheap transmitter and receiver.

In other words, digital modes that are "almost" as cheap as CW
don't work well for weak signal work. Digital modes that are
reputed to work as well or better than CW cost substantially more.

Yeah, but QST says this month that 48% of ARRL members currently have
internet access. They don't say, but I'm willing to bet that the percentage
with a computer is far higher. Just look at any hamfest and you'll find
nearly as much computer equipment as ham equipment (often more). Computers
have become such an ordinary appliance that they permeate the homes of
almost everyone technically literate today, and the homes of many who are
not. They aren't the sole province of hackers anymore, heck, even Dxers
have them.

And, of course, as I noted, you don't have to have a computer for
many digital modes, even a scrounged old terminal will do. Those
can be obtained free even in many third world countries, as witness
amateurs I've contacted via digital in such countries who *have*
scrounged free terminals. 20 years ago, having a terminal was hot
stuff, but today they're so obsolete that companies and governments
all over the world dump them in the landfill because they can't even
give them away.

>equipment right now.

Why am I not surprised? Many of today's amateurs are technological
illiterates, lost in the mists of time. They don't know how simple
and cheap modern digital methods can be, and they don't understand
the information theory that says how much better those methods can
perform than OOK. In part that's because they've been brainwashed
that "Morse gets through when nothing else will" by our testing and
licensing system, and in part that's because they've never been
properly introduced to modern signaling theory. Most, if asked,
wouldn't know who Shannon was, or if he said anything pertinent to
radio communications.

To be fair, part of the blame rests on the shoulders of digital
operators and equipment manufacturers who have embraced truly
dreadful dreck and pretend it represents modern digital signaling.
HF packet, as presently implemented, is so bad that if the designers
had set out to create the worst possible method they couldn't have
done a much better job of it than what they've produced.

Now I don't really want to slam the fine folks at TAPR, and others,
who trapped us into these systems. I expect most of them only saw
the methods we use as a quick kludge for proof of concept and never

intended for the technology to remain frozen at that primitive level for a decade or more. They grossly overestimated the knowledge of the average amateur and grossly underestimated the inertia of amateurs in general.

The best way I know to undo some of that damage is with discussions like this in forums like this. If the average amateur can be made aware that what's offered to them *isn't* the best, or the cheapest, way to do digital, perhaps we can break out of the corner we've painted ourselves into, and really get some good systems operating on the air.

I'm a senior microwave radio tech. We were implementing a BRAND NEW
microwave system in Northern Ontario (Thunder Bay is WAY SOUTH....).

We had an major system problem, with no audio path between the
microwave sites and no Bell line, no cellular (are you KIDDING?).

We were both ham, but forget VHF 'cuz of the path. Forget 80 metres '-
I had no HF with me anyway...

One-way the ausio path was working, the other way ZIPPO (4-wire
circuit).

Through signal injection on the baseband and "picking off" the 1 K
tone on the Peggy (frequency selective volt meter) we were able to

get the system working through MORSE CODE.

Wasn't a hard problem, just an easy fix; not a great story, but it saved us a LOT of time; you don't travel by jet in Northern Ontario to exchange ideas, but you sure do by 4 wheel drive, snowmobile and the like.

CW kept us warm THAT night, I'll tell the world, and saved us VALUABLE time as well.....

Regards de Mike.

P.S (Also 1985 Canadian champion in CQWW CW contest.
What the heck, I love CW..........)

You know, Gary, we need to remind folks like Burt what Amateur Radio
is all about. He's become too comfortable with his flames, so I
plan to pass on the Amateurs Code (with emphasis on CONSIDERATE and
FRIENDLY) everytime Burt feels a need to slam the hobby:

THE AMATEUR'S CODE
Paul M. Segal W9EEA (1928)

The Radio Amateur is:

CONSIDERATE...
never knowingly operates in such a way as to lessen the pleasure of
others.

LOYAL...
offers loyalty, encouragement and support to other amateurs, local
clubs and the American Radio Relay League, through which Amateur
Radio in the United States is represented nationally and
internationally.

PROGRESSIVE...
with knowledge abreast of science, a well-built and efficient
station and operation above reproach.

FRIENDLY...
slow and patient operating when requested; friendly advice and
counsel to the beginner; kindly assistance, cooperation and
consideration for the interests of others. These are the hallmarks
of the amateur spirit.

BALANCED...
radio is an avocation, never interfering with duties owed to family,
job, school, or community.

PATRIOTIC...
station and skill always ready for service to country and community.

This way he'll never forget the true meaning of the hobby...

Aloha+73 de Greg WH6DT

5565. Service Techs 10 Commandments

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-28 00:00:00 UTC
From: Bob Morrow <bobm@msn.fullfeed.com>
Message-ID: <44di6l$pgf@fullfeed.msn.fullfeed.com>
Source record: 237822

Ten Commandments For The Service Technician:

(1) Beware the Lightning that Lurketh in the Undischarged Capacitor, lest it smite Thee and cause Thee to Bounce upon Thy buttocks a most UN-technician-like Manner.

(2) Causeth the Switch that Supplieth large quanities of Voltage to be Opened and Thusly Tagged, so that Thy Days in this Earthly vale of Tears may be Long.

(3) Prove to thyself that all Circuits that Radiateth, and Upon Which thou Workest, are Grounded, and have their Power Reduced or Removed, lest they lift Thee to thy Radio Frequency Potential and causeth Thee to Act like a Radiator also.

(4) Tarry not amongst those Fools that engage in Intentional Shock; for Verily they are surely Non-Believers and are not Long for this World.

(5) Take care that thou Useth the Proper Method when thou takest Measurements of High Voltage, lest thee Incinerate both thyself and thy Meter. While Thee hath no account Number and can therefore be Easily Replaced, thy Meter doth have an Account Number and as a Consequence, replacement bringeth much Woe unto the Supply Room and Purchasing Officer.

(6) Tamperest not with Interlocks and safety Switches, for this Incurreth the Wrath of thy Supervisor and bringeth the Fullness of the Fury of the Safety Inspector down upon thy meager Head and Shoulders.

(7) Workest not on Fully-Energized Equipment, for if thou so Dost, thy Funeral Home shall surely Console thy Widow.

(8) Workest not on Equipment alone, for electrical Cooking is a slothful process and Thou might Sizzle in Thy own Fat for Hours upon the Circuit before thy Maker sees fit to end thy Misery.

(9) Triflest not with Radioactive Tubes and Substances, lest thou Commence to Glow in the Dark like the Firefly, and thy Spouse have no Further use for thee except thy Wages.

(10) Thou must forceth thyself to Document all Modifications made by Thee upon Equipment, lest thy Successor tear his Hair out and go slowly Mad in His attempt to Decide what manner of Creature hath made a Nest in the Wiring of such Equipment.

I have an old DX-100 from years ago (when I was not married and still in high school) that works very well with a long wire antenna (built from scrap motor windings). It has been about 15 years since I bought it.

> if you're posting here, you already have (the computer) that covered.

I should have made it clear that working for a software company has it's benefits. I leave the computers at work, I have nothing like that at home.

Gary, I do understand that there are superior modes to packet and CW, however that was not the purpose of the original posting. To me, spending even a few 100 dollars on 'superior' equipment is still out of my reach. That's simply the way it is. I do agree with you that the current way of doing packet is just not very good, and your suggestions are interesting to say the least.

The bottom line for me is that, I am forced to improvise with all my ham related items, whether it be stringing up an antenna with old rusty nails, or building a cheap but working transmitter on an aspenite board that I had to drill holes into (an improvised version of a perforated circuit board). If it works, it works.

Just out of curiousity, what bands do you spend most of your time on, and what modes do you use ? What kind of equipment are you running ?

I took my Novice in 1973 at age 11. I took my General in 1974 and
worked hard for it. At 12, it really expanded my horizons.
It was a stretch. I think making tests a stretch is a good thing.
Last year I passed my Advanced and Extra in one sitting. The
theory was easy. I have heard other people say the same thing, and I
have never, ever been considered a genius. I read Gordon Smith
while on the throne every morning for a month and had the answers
cold. Granted, I'm an adult now, but it wasn't a stretch this time.
I was disappointed.

>
> Is the subject matter covered in the exams too simplistic? Does it not
> suffice that an operator know what an oscillator is and does, or must he
> also know how to design an improved one?

It depends on the part of the spectrum for which one is trying
to qualify. I am pleased with the no-code tech concept. It exposes many
people to ham radio. To get to real HF, i.e. 80, 40, 30, 20, 17 and 15M,
I advocate more subdivision. Why not open up *part* of the real HF
bands to the masses? However, crowded conditions may impede or
destroy ham radio's ability to offer something of value.
(Notwithstanding the possibility of innovation....)

>
> Is the True/False and Multiple Choice technique inadequate for determining
> whether the applicant knows the correct answer? It seems to be good enough
> for just about every other licensed discipline.

It is easy to grade. That is why everyone uses multiple choice.
IMHO, one needs a more extensive knowledge of subject matter
to pass a written or oral test.

>
> Perhaps there aren't enough questions on the test. Would 500 or 1000
> be a more reasonable requirement?

Might be. I want to discourage ignorance and disseminate knowledge.
Adding more questions would accomplish that as well as any
educational activity that involves testing.

>
> I suspect that you make your assertion based on some observable
> evidence. And further, you feel that operators who have been
> licensed since the FCC began releasing the question pool are not
> knowledgeable enough to conduct themselves responsibly. That would be a
> problem, but is it true?
>
Coders have put more time and energy into winning their licenses.
On average, they have more of a _stake_ in their licenses.
Stakeholders tend to be more responsible than non-stakeholders in any
endeavor: they have more to loose. Learning the code
is a significant investment in time and money for most people
and it is not in human nature to ignore sunk costs.
The need for code testing fails under strict scrutiny, but there
needs to be some mechanism to ensure tomorrow's HF operators
are stakeholders. Other than the code, IMHO that mechanism is
currently not adequate.

I do _not_ think no-coders are in general any less responsible
people than coders. Folks are folks. Experience has backed up my
premise that there are as many heros and jerks in ham radio
as anywhere else.

Are today's 2m operators knowledgeable enough to conduct themselves
RESPONSIBLY? That depends on their "responsibility."
On average, the amateurs who have passed the code test
have a tendency to be better operators. However, I do not think
the higher average level is CAUSED by the code test.
It is caused by a higher demonstrated commitment.
It is caused by them being bigger stakeholders.

I keep using the words average and aggregate because there are
many, many excellent codeless techs. There are many, many
bozos on 75M. We are talking about is the big picture
and we debating how to marginally improve a system that works
pretty well. I am thinking of how to improve the licensing
procedure to encourage excellence.

I am of the school who thinks it might be nice if we could funnel
the commitment of today's HF operators into something more
marginally useful than CW. Are there many extra class hams
who say that?

>
> But if you are suggesting that we should expect prospective hams to go
> out and buy a 1000 page text entitled "Everything There Is To Know About
> Radio", and learn everything in it before he can pass one of your tests,
> I must disagree.

If I were dictator, I would leave the testing method for the codeless tech program intact. However, at the Extra level, such a comprehensive, 1,000 page tome might be appropriate.

>
> The question pool is an excellent way to teach people what is expected
> of them, but relevant background information should also be provided. I
> think what you really want is for new hams to learn what they need to
> know to operate responsibly. However it is absolutely not necessary to
> put them through a wringer.

Ham Radio's purpose is not to limit crowding or force people to demonstrate commitment. Our purpose is to perform some legitimate function. A requirement for commitment is not a purpose, but rather a means to an end. We will be more effective with stakeholders than without.

Hello again all,
Here is the updated "You Know You're a Ham When..." list,
consisting of the original plus replies that were posted and/or
e-mailed to me. Enjoy!!

73, Mike KB3RG

You know you are a Ham when:

The only time you get up at 6AM is for a hamfest.

You know you can run all your home appliances on your personal back-up
power.

You have breakfast with a guy in England every morning.

Your ARES/RACES/MARS bags are always packed.

The cute girl with the "KISS" T-shirt asks you what bands you like and
you answer two and twenty meters.

You live in a shack.

A clerk asks you to spell your name and you do so phonetically.

In a conversation, you wait for the courtesy tone before speaking.

You hear a scraping sound when driving thru the fast-food restaurant
window lane.

A band opening is more important than a grand opening.

Sight-seeing amounts to looking at rooftops for antennas.

The radios in the car are worth more than the car.

When walk out of the house you not only feel your pants pockets for
your keys and your wallet, but also your hip for your handheld.

Your son's schoolteacher calls you on the phone to ask why your son
identified countries on the world map as JA, VK, VE, G, UA and XE.

If you refer to your house as "Ohm, sweet Ohm".

You answer the phone with your callsign.

You're talking on the phone and end every sentence with "(callsign) for
ID".

Your prime criteria for a new car is that it have zero ignition noise.

You and your wife hike to the top of a famous mountain, but rather than enjoy the magnificent sunset and giving her a kiss, you fire up the HT to see how many repeaters you can hit.

You realize that you've been studying code too long because you automatically attempt to translate random clicks and rattles inside your home, car, or office.

You look out at the Rocky Mountains and try to figure out how to get an antenna mounted on the highest peak.

You look at the CN Tower in Toronto and develop a plan to get it to resonate on 160 meters.

Your wife, who is still 130 lb and tremendously attractive, comes to you in a hot pink topless teddy and starts nibbling on your shoulder and you tell her to hang on for a minute because you're just about to make the contact with East Molohavnia.

5581. Re: GMRS equipment man 1

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-29 00:00:00 UTC

Source record: 237638

DM>I'm looking for manufactures of General Mobile Radio Service
>equipment. I know Radio Shack sells an HT (I have two of them).

And, of course, nothing Radio Shack carries is suitable for serious
GMRS work - due to the fact that they lack CTCSS capability.

From the Personal Radio Steering Group:

GMRS Channels in Mail Order Radios
Last revised: 8/11/95

Prior to the 1990s, new GMRS radios were usually available only from local two-way radio vendors, or directly from the radio manufacturers themselves. When the radios were purchased, the manufacturer or vendor would install the appropriate crystals (or program the transceiver) for the specific one or two channels or channel pairs authorized on the purchaser's license.

In the last four years, GMRS radios have become increasingly available through national mail-order outlets, and through local consumers' electronics stores. Most of the radios available from these sources are pre-programmed or pre-crystaled for operation only on specific channels. Some models can be reprogrammed or recrystaled for other GMRS channels, but other models cannot be so changed.

Some confusion has developed as to which channels are installed or available in the different models of radios available from these mail-order sources and from these local stores. The advertisements for these radios sometimes don't identify the specific channels, or sometimes even identify the WRONG channels!

There is also some confusion as to what the capabilities and technical specifications are for these radios. Many models available from mail-order sources are NOT SUITABLE for GMRS repeater use, for example. (Repeaters are a special kind of GMRS base station, usually mounted on a tall building or tower, which repeat the signals of GMRS mobile units. From their advantageous mounting height, repeaters can substantially extend the communications range of the mobile units communicating through them.)

However, one recently introduced model (Maxon's GMRS 210+3, described later) IS capable of repeater operation. The new model offers certain highly desireable, user-friendly capabilities that will most certainly have a dramatic impact on the GMRS market. (Almost every other handheld radio is now out of date and/or over priced!) ~~~

describe other capabilities (and limitations) of these units. If you have additional information or corrections, please leave us a message!

The reference to "CTCSS" below refers to the kind of subaudible tone control ("continuous tone-controlled squelch system") needed to activate a repeater. For a GMRS radio to be able to communicate through a local repeater, it must be able both to transmit on the repeater INPUT frequency (in the 467 MHz band), AND to impose a CTCSS code onto that signal. Different repeaters use different CTCSS codes, and you need to adjust or to reprogram the code for the particular repeater which you wish to use.

Many of the radios described below do NOT have a CTCSS capability, and some cannot also transmit on the 467 MHz primary channels used for the repeater INPUT signals. In either such case, that model is not capable of operating through a GMRS repeater.

==========

Maxon model GMRS 210+3:

This model, introduced in late December 1994, has capabilities unlike ANY other currently available GMRS transceiver. Some of these features are highly prized by GMRS personal users.

10-channel positions:
Channels 1 through 7: the seven non-repeater "interstitial" frequencies (462 MHz only).
Channel 8: the 675 channel, user selectable from the front panel for EITHER repeater or direct communications.
Channels 9 and 10: dealer programmable for any 2 of the other 7 PRIMARY channels, also front-panel selectable for either repeater or direct communications.
With the front-panel repeater offset selection for channel positions 8 through 10, this could actually be considered to be a THIRTEEN-channel radio!

CTCSS tone-code selection:

FRONT-PANEL USER SELECTABLE for ANY of the approximately three dozen common tones, plus another dozen extended and "in-between" tones, a total of fifty. The user can quickly change the tone code on any channel. The capability to change the code no longer requires access to internal programming or the use of a special external programmer. It's all accessible on the front panel.
~~~~~~~~~~~
This is the first UHF transceiver since the mid 1970's designed exclusively for the GMRS with a repeater capability. It is also the first GMRS radio EVER with user-selectable multiple CTCSS codes.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Transmitter output power:

5582. Re: GMRS equipment man 2

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-29 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.9006.7585.0NFBB35F@woodybbs.com>
Source record: 237639

(Continued from previous message)
Depending on the battery or power source, from 2 to 5 watts output,
with a low-power (1 watt) front-panel selection.

Price: $299 suggested retail. However, this radio is widely advertised
by mail-order vendors, with a sale price in the $195 to $200 range.

Other: Comes with a 16-hour charger (a desktop rapid-charger will be
available later), cigarette lighter plug (for 5-watt vehicular
operation), nylon handstrap, and licensing instructions.

Availability: Call MAXON SYSTEMS (1-800-922-9083) to request the name
and address of your nearest Maxon dealer. These radios
are also available from certain mail-order vendors. Two
whom we know of in particular are: Sports-Comm Distributing
in OR (1-800-573-2256) and Communications Electronics in MI
(1-800-USA-SCAN).

Normally we don't HYPE a particular model or manufacturer. This Maxon
model GMRS 210+3 represents such a SIGNIFICANT ENHANCEMENT over other
GMRS radios (ANY model, ANY manufacturer) that we wish to give it the
maximum possible exposure. Maxon is to be commended for finally intro-
ducing a GMRS radio model that incorporates features which personal users
have long sought but which have been unavailable on any prior radio.
(The other models described below pale by comparison. They're OBSOLETE!)

Further information about this radio, and about its implications for the
future of GMRS, are in the PRSG publication: Technology, Marketing, and
the Evolution of the GMRS (January 1995).

==========

RADIO SHACK Model PRS 100 (also manufactured by Maxon):

Channel 1: TX 462.6375 MHz, RX 462.6375 MHz
Channel 2: TX 462.7125 MHz, RX 462.7125 MHz

CTCSS: None available, and apparently no space for being added.
Other: 1-watt hand-held radio. 16-hour charger (only). Application
Form (FCC 574) and instructions included, although many
corrections are necessary. Not reprogrammable for other
channels, nor for a repeater split. $260 apiece. We've heard
of some local RS stores discounting this units down to as low
as $150. (With the introduction of the Maxon 210+3, discussed
above, the price of the PRS may drop substantially!)

NOTE: We understand that this model has been discontinued as of February
1995, replaced by the Model PRS 101 (see below). Local Radio Shack
stores are reported as selling the PRS 100 for about $180 as a
"clearance" item.

==========

RADIO SHACK Model PRS 101:

Channels 1 through 7: TX/RX on the seven GMRS "interstitial" frequencies
(462.5625, 462.5875, 462.6125, 462.6375, 462.6625,
462.6875 and 462.7125 MHz). Not reprogrammable.
Channel 8: 462.675 MHz. Not reprogrammable.
Channels 9 and 10: 462.550 MHz. Both are independently programmable
by the user (by removing the back cover) to any of
the seven GMRS primary frequencies in the 462 MHz
band (other than 462.675 MHz).

CTCSS: None available, and apparently no space for being added.
Other: Maximum 2-watt (reduceable to 0.9 watt) hand-held radio. 16-hour
charger (only). Application Form (FCC 574) and text instructions
(but NO sample) included, although certain corrections and
enhancements should instead be followed. Not reprogrammable for
any other GMRS or non-GMRS channel. $220 apiece.

NOTE: This model was introduced in early February 1995, and apparently
replaces the 2-channel Model PRS-100. (However, with the intro-
duction and wide availability of the Maxon 210+3, discussed above,
the price of the non-repeater-capable PRS 101 should be expected
to drop substantially!)

==========

Uniden Model GMR 100:

Channel 1: TX 462.550 MHz, RX 462.550 MHz
Channel 2: TX 462.725 MHz, RX 462.725 MHz
Channel 3: TX 462.5875 MHz, RX 462.5875 MHz
Channel 4: TX 462.6125 MHz, RX 462.6125 MHz
Channel 5: TX 462.6375 MHz, RX 462.6375 MHz
Channel 6: TX 462.675 MHz, RX 462.675 MHz ("Emergency")
Channel 7: TX 462.6625 MHz, RX 462.6625 MHz
Channel 8: TX 462.6875 MHz, RX 462.6875 MHz

CTCSS: None available, apparently no space for being added.
Other: 1-watt hand-held radio. 16-hour charger (only). FCC Form 574
included, but apparently no further instructions. Units are not
reprogrammable for other channels, nor for a repeater split.

5583. Re: GMRS equipment man 3

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-29 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.9007.7585.0NFBB360@woodybbs.com>
Source record: 237640

(Continued from previous message)
No CTCSS capability. Price: From $160 up.

CAUTION: These Uniden radios are sometimes ERRONEOUSLY being advertised as being capable of operation on all eight of the GMRS primary channels. NOT TRUE! They operate ONLY on 550, 675 and 725 of the primary channels, plus on five of the seven interstitials (as shown above). Furthermore, despite one channel being labeled as "Emergency," these radios are NOT capable of using repeaters on the national 675 emergency channel.

==========

Maxon (model designation unknown)

Channel 1: TX 462.575 MHz, RX 462.575 MHz
Channel 2: (individually crystalled)
For instance, one mail order house installs the 625
channel in this second (non-repeater) position. This
may vary from one source to another, but the 625 frequency
appears to be the most common for the second channel.

CTCSS: None provided, but may be available "after market."
Other: 1-watt hand-held radio. 16-hour charger (only).
Unknown if FCC Form 574 or instructions included.
Price: as low as $110 (mail order) and up.

==========

Maxon Model GMRS 2+2:

Channel 1: TX 462.5625, RX 462.5625
Channel 2: TX 462.675, RX 462.675

CTCSS: Available from Maxon ($50)
Other: 2-watt hand-held radio. Drop-in charger ($17) and speaker/mic
($10) also available. Unknown if FCC Form 574 or instructions
included. Crystals are soldered in, but might be changeable(?).
Antenna adapter (to BNC), service manual, and other options
available directly from Maxon. (Prices cited here are from a
discounting mail-order outlet. Maxon's prices are somewhat higher.)
Price: $99 (from a recent advertisement, may have been on
a "close out" sale).

==========

Maxon Model CP-0520:

Channel 1: TX and RX: per your specification (but included in price)
Channels 2 through 4: TX and RX per your specification

CTCSS: Available ($64 for encode/decode)
Other: 5-watt hand-held radio (switchable to 1 watt?). Crystals for the second through fourth channels available at $30/channel. Includes 16-hour charger, rapid charger available as an upgrade ($34).
Price: $209.75 from PageCom (from a recent mass mailing which they made to GMRS licensees).

==========

Maxon Model SP-2850:

10-channel (dealer programmable) hand-held radio.

CTCSS: (Believed included with the basic price, but we're not sure.)
Other: 5-watt hand-held radio, programmable for any ten combinations of frequencies (TX and RX) and CTCSS. Includes battery, desktop charger, flexible antenna, belt clip, 1-year warrantee. Price: $389.75 from PageCom (from a recent mass mailing which they made to GMRS licensees).

==========

Maxon Model SM-4450M:

16-channel (dealer programmable) vehicular radio.

CTCSS: (Believed included with the basic price, but we're not sure.)
Other: 40-watt mobile (vehicular-mount) radio, programmable for any 16 combinations of frequencies (TX and RX) and CTCSS. Probably includes hand microphone, power cord. Price: $329 (or $459 for the base station model, SM-4450B) from PageCom (from a recent mass mailing which they made to GMRS licensees).

==========
==========

Please provide us with additional information or corrections. Thanks.

(Continued from previous message)
Electric, Relm [Regency], Uniden, Maxon, Icom, etc.) of commercial-grade UHF-FM transceivers can supply models which are suitable for GMRS use. Most models of UHF-FM transceivers which are FCC "type accepted" for use in the various "Part 90" business, industrial and local government radio services are also type accepted for use in the GMRS (unless they exceed 50 watts output power, the maximum permissible in the GMRS).

To find more information about local sources of UHF-FM transceivers suitable for GMRS use, you can also contact your local sales outlets for the manufacturers listed above, or your local vendors of two-way radios to the business-use community. Some (but ONLY some!) vendors are knowledgeable about the GMRS, although many have misconceptions about how it can be used. Locally purchased radios are likely to be more expensive than mail-order radios of comparable capabilities, but you will usually have the assurance that you will be able to obtain local service and repair on the units. (ALL UHF transceivers will need occasional repair and tune-up!)

More information about finding sources of GMRS equipment are available in publications from the PRSG. See Bulletin P3 for a summary of current publi-cations. Two of particular interest to those seeking to purchase GMRS radios are:

L.2.a Choosing Sources for GMRS Equipment; Observations and Background. June 1988, 8 pages. $3.00.

L.3.a How to Choose a Hand-Held GMRS Radio. June 1988, 16 pages. $6.00. (This one publication alone could save you a hundred dollars or more on your next GMRS purchase! Be an INTELLIGENT CONSUMER.)

PRSG Newsletter SUBSCRIBERS:

From the MAIN menu, J (JOIN) the 4SALE Conference for more information about GMRS radios available from mail order sources, including more detailed information (and MAILING ADDRESSES for mail-order outlets) about availability and suitability for GMRS use.

Non-SUBSCRIBERS:

Hey, do you need MORE INCENTIVE TO SUBSCRIBE? There's great equipment out there, and we research its availability and suitability for GMRS use, and then report these findings in the 4SALE Conference on this BBS. Access to the 4SALE Conference (and to the other special interest conferences) and to GMRS licensing database are just two of the ENHANCEMENTS and BENEFITS which we provide to our newsletter subscribers. (See Bulletins P2 and P3 for more information on subscribing. ~~~~~~~~~~~~~~~~~~ ~~~~ ~~~~~~~~~~~~~~~~~~~~~~~~~~

Here's a reason why you haven't received an answer:

HOLD INCOMING WELFARE TRAFFIC
Greg Pool WH6DT

During a disaster, we hear many Amateur Radio stations passing welfare traffic. It's the easiest traffic to pass, there's no time limit and it is the most visible part of emergency communications.
Many times an operator will sit on a 40 or 20 m frequency specifically because they have everything set up for a phone patch into a specific area of the country. Sometimes operators are given free long distance accounts to place those calls. Everyone can hear the anguish in the voices over the phone and the caller thanking the operator over and over for their dedication and service.
That kind of instant gratification can be intoxicating for most amateurs, to the point of passing welfare traffic without considering the consequences. From my own experience, most welfare traffic is supportive but not necessary. In fact holding on to that initial query will probably get you an answer faster than if you had actually sent it.

INCOMING VS OUTGOING
Let's divide it up. There's incoming welfare traffic, where a party sends a message to a party within the disaster area; and there's outgoing, where the party within the disaster sends a message to the outside.
What does it take to run an outgoing message? It takes an operator in the disaster area and anybody on the outside willing to pass it. Usually there's more than enough volunteers to do help deliver it.
But incoming is much more intensive. Not only does the operator on the inside accept the traffic, he either finds a runner or runs it himself. Rarely are either of those choices viable options. You can't leave your station, the person next to you already has 20 things to do, and the phone lines must be left open for civilian and civic disaster relief agencies.
Thus, incoming welfare traffic is a luxury. The victim will get word

out eventually, even originate their own outgoing message. If they are dead, they're dead; your messages will not help them. If they are injured then a disaster relief agency will attend to them. But if you are a thousand miles away, what more can you do? By sending that message, you tax the relief effort even more.

WE WERE NOT THINKING

The recent earthquake in Los Angeles is similar to my own experiences on Kauai during Hurricane Iniki in 1992. Again many Amateur Radio operators placed an emphasis on incoming welfare traffic on many of the 20 m and 40 m nets; there were very few "outgoing-only" nets. In the San Francisco Bay Area, one Amateur Radio operator provided his phone number to a local TV station so that people could contact him for incoming welfare traffic.

We were not thinking beyond just being on the air. We were not thinking about what it took to pass that traffic in the disaster area. We were not thinking about what passing incoming traffic took away from those in need.

Many of the stations accepting the incoming traffic used local phone lines to contact the disaster parties, and in the first few days the success rate was terrible. But in doing so it meant that someone who had emergency or priority traffic could not use the phone because it was being tied up needlessly.

It is a matter of precedence and responsibilitiy. The best thing you can do is not originate or accept any incoming welfare messages in the first week after disaster. There's usually nothing the sending party can do anyway except wait or sponsor a disaster relief agency. Why tie up the network needlessly?

Instead, stand by to originate and accept outgoing messages. You may not handle as much traffic, and I may not hear (or see) your callsign as often, but you will have freed up an operator in a disaster area to become part of the solution and not part of the problem.

>>> when a store gives a discount [to senior citizens] it surcharges the young

That's not clear. If the store sets its prices to provide an attractive return on investment based on historical patterns of volume, it might then decide to offer a lower price to attract a new category of customer more price-sensitive than the existing base. If the overhead is covered by the rest of the customers, then any gross margin on the discounted of the sales is money in the owner's pocket. Pricing is far from a trivial science...

Hmmm...that's funny. I listen quite a bit on my general coverage
receiver and don't hear much local activity on the ham bands.
Occasionally, there's a call or two, but this would be less than 5% of
the amount of QSOs that I hear locally on 2-meters. But never mind me...
of course you would know more about the makeup of our local amateur
population since you "work" hams in Charlotte and I only LIVE here!

Avery,
I respect your opinion and think you have a healthy outlook on our hobby. I believe there is a lot of room in amateur radio for a wide variety of people with differing goals and interests. I am personally fascinated with electronics and technology. While I find communicating with others a fun and worthwhile aspect of ham radio, I get a much bigger kick out of bringing new life to a long dead piece of equipment, or applying new technologies to expand my knowlege of radio and electronics in general. As far as I know, I am the only ham who has used an automotive head up display to view packet data as I drive down the road. In my opinion, the question of code/no code has been beaten to death. My father was a code operator in the military and tried to teach it to me when I was younger with meager results. It was a personal challenge to me to learn it as an adult. While I have passed code tests, I have never engaged in a single CW QSO. CW conversations don't really interest me very much. Let those that wish to explore that aspect of our hobby do so. Those that don't wish to ... don't. I do not perceive no code operators to be second class citizens. From my perspective, all are welcome on the bands so long as they maintain common courtesy and obey the regluations.

Yow, I read several "sour grapes" posts claiming the Kenwood 870 was not a real improvement. I went and tried one next to a Kenwood 850. The guy is right! The DSP is not really very magic at all. It is OK, for sure. But it is no improvement over the 850 with a Timewave attached at all. In fact, I liked the 850 better since it had the multiple IF filters I could switch in, the 870 depends entirely on its high cut / low cut (slope tune on the 930, et. al.) to narrow the passband.

Just an observation at HRO today.

The first (and only) transmitter I ever built was a science club project in the seventh grade back in '65. It put a CW signal on the AM broadcast band that travelled about two blocks, and was powered by a grapefruit with a penny stuck in one side and a nickel stuck in the other. Two weeks later I had a shortwave radio. Six months later I had SWL cards from about 25 countries. Twenty years later I got my ham ticket.

A transmitter powered by a grapefruit? Why would anybody bother?

There is no contesting newsgroup, but there is an e-mail "reflector" or
mailing list for contesting/contesters. Subscribe to it by sending an
e-mail to cq-contest-request@tgv.com, with the message containing the
single word "subscribe". Software issues are discussed there sometimes,
as well as operating tips, scores etc.

No. You have to appear in person.

Probably 2-3 times a month the ARRL-VEC posts a list in this newsgroup of upcoming exam opportunities sponsored by their organization. They account for about 60% of all exam sessions in this country, and have groups in every state. Either wait for that posting to appear or send an e-mail to bjahnke@arrl.org and ask him for a copy. He is the director of that portion of the league's operation.

Sandy, thanks for posting this. This kind of stuff is great.

And this seems like a good time to plug the First Contact Certificate
that is indeed still offered by the League.

Ever been sitting around in the evening and hear the repeater key up,
and no audio for a few seconds. Then a shakey, nervous voice utters
bits and peices of what obviosly is a new call? When I hear it, I
jump for the mic, sometimes being first, sometimes not. If you
answer these calls, and the shakey voice on the other end tells you
that you are his first contact, congratulations, you can award that
person with his first operating certificate (wallpaper, award, etc.)
Just try to get his mailing address and name. Send a note to the
ARRL giving them the log data (time, freq, etc.) and send a 9 X 12
or larger envelope along with your note. The envelope should be
addressed to the new ham, and have postage on it. The league will
send a nice certificate to that new ham in the envelope you have
provided.

Give it a break. This sort of inane drivel belongs in the alt.loonies area. Fisher et al really need a life....The guy thrives on responses (right, just like this) so perhaps if everyone ignored his claptrap he might go away! And hope springs eternal......There are days when some of the deranged postings here would give an aspirin a headache, which is unfortunate since there is so much truly useful info posted as well. C'est la vie, I guess...

:> KF4DDM

Drew,

I'm really curious...Who are you fighting for the abolishment of "this outdated requirement?"

Just voicing your opinion on the Internet doesn't go anywhere as far as that is concerned. I mean, who have you honestly contacted (agency, senator, congressman, etc.) who has the power to do ANYTHING (if at all) regarding the code exam requirement?

And would you mind posting copies of your correspondence? Some of us would like to see a rational argument. So far all I have seen is emotional outbursts as to why some are against "being forced" to learn an "antiquated mode."

I could care less either way as I am slowly exiting the hobby...as it slowly goes down the tubes....

Nuff sed by me

>take your punishment and learn from it.

Yes, and I have been given a ticket for a ridiculously high and dangerous speed
before, which I WAS NOT doing. 5 MPH over the limit? Yes. 25 MPH over? No. I
don't give a damn what his radar said, it was wrong. In this state it matters
very much - the fine is based on how much over the limit you were doing.

That's the whole problem with Doppler radar: it can be fooled rather easily.
Cops don't seem to realize this. If the radar sez so, it must be true.

>CW-only rigs are cheap and the performance is commensurate. On the other
>hand, digital communcations is possible with the same radio with minor
>modifications, with which one can really experiment with the SOTA.

Sorry, but no.

In the former statement, the implied slam at inexpensive CW radios, that they don't perform well, is totally false. You may find they perform BETTER than your fancy digital ricebox radio, due to better phase noise performance of the simple oscillators in the CW rigs vs the synthesizers in the ricebox, and due to lower noise floor because there's no square-wave crud floating around inside the case. That is, when comparing apples to apples, and not fancy digital modes to CW. If we ARE comparing fancy digital modes to CW, fancy digital modes obviously win, regardless of the slightly worse performance of the ricebox radio itself.

As for the latter statement, suppose we don't want to push the state of the art? Suppose we just want to get on the air? Suppose we don't own a personal computer (which you left out, again)? Suppose we want to contact thousands of amateurs worldwide, rather than the handful who can afford and are using fancy digital stuff? Suppose we're running off a small gel-cell battery on a picnic table in a park? Suppose we're packing our entire station into the wilderness on our backs, and weight and bulk are factors? Suppose we're mobile and can't spare two hands for the keyboard? Suppose we LIKE CW? Suppose we see computers at work all day and don't care to look at them at home? And on and on and on and on and on and on and on and on and on and on and on...

Hey, it ain't only our side that keeps re-hashing this over and over and over. And over and over.

And please don't send me any "regardless, code tests inhale" messages. I agree.

I built these types of transmitters, too (remember Radio Shack's "P-Box"
kits in the 70's?) Lots of fun, and it fueled my interest in radio for
the years to come. And as it relates to amateur radio, a big part of the
hobby (for most) is the ability to build your own equipment and
experiment with it.

Okay...I admit it...I was short-sighted on this one.

Wrong !!! mike(slmusr03@MBnet.MB.CA) never wrote that.

I thought the original post was simply to get some reasons for learning
the CW mode. He did not ask for reasons to learn digital modes. If one
does not like or advocate CW, then why are they responding to the original
post ? This is starting to get into the CW yes / CW no category. I'm sure
Bill (original poster of the question) appreciates the extra 'reading'
material.

From: supermag@dialup.francenet.fr
Message-ID: <44hkma$pdn@chleuasme.francenet.fr>
Source record: 237769

I'm looking the way
-to setup new channels,
-to modify current channels
-or to remove some old channels
My Rx/Tx an ICOM H16T has been tuned by vendor and
my manual DOES NOT explain how to proceed with frequency tunning.
Each time I need some new frequencies, I have to send back my Rx/Tx
to the vendor and to wait one or two weeks for get it back to me.

PS: I don't use this Rx/Tx for myself, but for a charitable
association which provides all legal permits needed for frequency
use, and which also often changes, adds or removes some frequencies.

Please answer by mail to supermag@dialup.francenet.fr ,
(and don't expect too quick answer)
Thanks.

From Tad Cook, KT7H
Seattle, WA September 29, 1995
To all radio amateurs

SB PROP ARL ARLP041
ARLP041 Propagation de KT7H

Solar flux was up a few points last week, and the average sunspot number was up quite a bit compared to the previous week. The average solar flux for the previous 90 days was 73, and the flux was above that value for all but one day last week. Still the activity is flat in the bottom of this solar cycle, and current projections don't predict any real improvement until at least a year or more from now.

For the short term look for solar flux to stay around 70 until the middle of October, then increase slightly to around the mid 70s. Geomagnetic activity should increase around October 2-6 due to a recurring coronal hole. After mid-month the geomagnetic conditions should become very stable.

Sunspot Numbers for September 21 through 27 were 20, 42, 50, 0, 38, 40 and 41, with a mean of 33. 10.7 cm flux was 73.9, 74.5, 75, 73.7, 74, 73.5 and 72.3, with a mean of 73.8.

Path projections for this week are to Sable Island (CY0) from Olympia, WA, Tulsa, OK, Kimberly, WI and Pittsburgh, PA.

From Olympia 80 meters looks good from 0100z to 1100z, with best signals from 0330z to 0930z. 40 meters should be good from 2330z to 0430z and again from 0830z to 1030z and around 1230z. Check 30 meters from 1530z to 0100z and 20 meters from 1600z to 2230z. 17 meters may be open some days from 1730z to 2000z.

From Tulsa 80 meters should be open from 2300z to 1100z, 40 meters around 1100z to 1400z and again from 2030z to 0300z, and 30 meters from 1330z to 2300z. 20 meters should be open most days from 1700z to 1930z.

From Wisconsin 80 meters should be good from 2200z to 1130z and 40 meters from 1300z to 0530z and again around 0900z to 1030z. 30 meters looks to be open from 1530z to 2000z and 2130z to 0100z. Check 20 meters from 1400z to 2230z. 17 meters may be open some days from 1630z to 2030z.

From Pittsburgh check 80 meters from 2100z to 1230z and 40 meters around 1030z to 1130z and then from 1330z to 0330z. Check 30 meters from 1230z to 0000z. 20 meters should be open most days from 1600z to 1930z.

Kevin,

Something in your remarks reminded me of going over to the Portland Antique Tractor and Gas Engine Festival, in Portland, IN. Here was one of the biggest gatherings of people with this interest in the country. It's really a big deal, all based on antiquated technology. I'm no fan of CW, but I sure loved this show, and I never pass up a chance to see antique technology on display, such as the radio museum at ARRL HQ. As much as I love the olde stuff, I have to agree that we in the mainstream of this hobby will lose all or most of our spectrum if we don't start innovating the way hams did decades ago. I can't help but believe people who cling to CW and analog, voice modes are putting themselves into a special-interest box, and that they will wind up getting together once a year, maybe at Portland... or Newington?

Tom, KA5NEE/9

5633. This Week in Amateur Radio #131 (for air through 10/6/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-29 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JbGi2Vg.sanderman@delphi.com>
Source record: 237778

Here is a summary of news items covered on edition #131 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 6-Oct:
-
1. Amateurs Come Through for FEMA after Hurricane Marilyn
2. RSGB Announces Winner of Young Amateur of the Year Award
3. FCC Begins Amateur License Renewal Notification Program
4. ARNS Announces Annual Newsletter Contest, Seeks Entries
5. German Astronaut Ham Dies in Air Show Accident in Berlin
6. Pagers Become Useless after Error Disables Satellite Link
7. Weekly Propagation Forecast with George Bowen, N2LQS
8. "The RAIN Dial-up" from Chicago
9. "Amateur Radio Newsline" - Edition #946 from Los Angeles
10. Mars Launch in 1996 to Include Amateur Beacon
11. Canadians to Begin Satellite DXpedition to Sable Island
12. New WWW Home Page Provides Antenna Restriction Information
13. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
14. Upcoming Special Event Stations
15. CQ Communications to Offer New VHF Specialty Magazine
16. Launch of Telstar 402 Communications Satellite a Success
17. "You Know You're a Ham When...!"
-
Funding for the program's transmission and production expense was
provided this week by a grant from users of the N9SBH repeater
system, which carries "This Week in Amateur Radio" on 146.505 and
224.16 MHz in North Webster, Warsaw, Elkhart, and Fort Wayne,
Indiana. Satellite time and uplink equipment have been provided
by SKYVISION as a service to the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,

and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

Gary Coffman said...

> Many of today's amateurs are technological
> illiterates, lost in the mists of time.

Gary goes on to mention Shannon and information theory and the
possibility of actually doing something new (or even related to
the later half of the 20th century ;-)) on HF.

MPERRY@estec.estec.esa.nl responded to Gary...

> But more. The tone of your posting goes on to suggest that you would
> prefer to turn the hobby into an even smaller and elite club than simply
> an association of "ye olde pharttes who pound ye brass". Now nothing
> less than a PhD in Information theory would suffice to get a licence.

I have gone back and forth with this since I got my ticket
about three years ago. As an engineer who has worked with
digital RF modulation techniques as well as as quite a few
software communications protocols, I felt amateur radio was
rather behind-the-times. I couldn't even find anyone else
within 20 miles of me running TCP/IP APR. (Though this is
starting to change.)

I have publically argued here that when amateur radio started,
communications was nothing more than RF and simple twisted-pair
telco. I stated (truthfully, I believe) that modern-day telecomm
is a far-cry from that and amateur radio had better pick up the
ball and RUN or risk loosing it all.

But others have said that commercial telco is too big and there
is no way we can compete with it and neither should we try.
I understand this point too. Implememting a multimedia
56kbaud packet network that rivals internet (but entirely
via amateur RF) seems impossible. The time and money required
is, IMO, beyond the resources of even a hobby of amateur radio's
scale. It's a hobby. We have jobs and families to worry about.
Amateur radio is not our career. (At least for some of us. ;-))

So I have some questions for the ARRL or anyone else who cares to answer.

Just WHAT are our goals for the next ten years and what is to be
amateur radio's role in emergency communications in the future?

Yes I know all about hurricanes and earthquakes wiping out
infrastrucure. We probably will be able to serve this need

for another ten, maybe twenty, years. But what do we do WHEN (and there is no IF here, IMO) commercial telco obsoletes us once and for all?

Furthermore, do we really need "goals" anymore or should we finally accept the fact that we are only a hobby (arhcaic in the eyes of many) and leave it at that? Will we forever be a "living memorial" to "the way it used to be", rather than an important hobby that also serves as as an emergency resource?

Regardeless of what WE believe (or want to believe), what do the FCC and the rest of the world think of us? Despite our numbers, we are very much in the minority. Perhaps we must accept that HF will become (already is?) the garbage band that commercial telecomm has abandoned. We will indeed be little more than "ye olde pharttes who pound ye brass".

5636. Re: Drop Code? No Way!

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-29 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <44hadu$6c2$1@mhafm.production.compuserve.com>
Source record: 237781

A ham who is using DSP filtering during a satellite QSO with computer-guided antennas shouldn't have to listen to sneering comments about "ancient methods" just because he chooses to conserve bandwidth and transponder power by employing a keyed CW mode. Such comments exemplify the term, "sophomoric."

Yuzuru Suzuki (ys@isr.harvard.edu) wrote:
: I recently started to use an old Vibroplex bug, and found it a lot of
: fun. I have a few questions, and if experienced bug users can help me
: out, I will be very grateful:

: (1) Dit Contact Adjustment:

<snip>
: The bug works
: OK, but I would like to make the distance between the contact points for
: dits much narrower. This is because I have been using Bencher's iambic
: paddle, and set the distance between the contact points fairly small.

: Is there any way I can do this for my bug so that I just have to push
: the lever much less?

: (2) Speed Range:

: What is the speed range for a bug for ordinary ham operators? I know
: that I can not send much slower than 20 WPM without additional weights.
: I can currently send around 25 WPM, and I am wondering if it is possible
: for me to go above 30 WPM with some practice.

: (3) Where to buy one:
<snip>

: 73, Yuzuru Suzuki, AA1JA (e-mail: ys@isr.harvard.edu)

After I took up fully automatic keys I found I could not go back to
a bug no matter how I tried. When I came to a dash, I couldn't pry my
forefinger off the bug no matter how I tried. As to making the
motion for dots (dits?) less, I think the main problem is that the
energy to set the bug's weight swinging comes from the push of
the thumb. If the dot string continues long enough with the
adjustment set the way you like it, fine. If not, maybe a different
bug would behanve differently.
I don't know where to look for bugs except at hamfests or by
inquiry on the internet equipment thread, but others may know better.

5647. Re: You Know You're a Ham When...

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-30 00:00:00 UTC
From: douglass@suntan.eng.usf.edu
Message-ID: <44ir85$pku@mother.usf.edu>
Source record: 237592

Ok Ok,,

Someone asked for the whole story so here it is....

Let me start by saying that it is very pleasing to see a work of love and fun go full circle and make it back to the originators.

One of our club members noticed this thread and couldn't wait to post it to our club's local newsgroup.
Here's how it went.....

The creative student hams of the University of South Florida Radio and Electronics club were sitting around at a club meeting looking for a fun way to do a simple fund-raiser. It was also observed that the club was in need of t-shirts with the new club logo printed on them.
The problem was what should we put on the backs???

"WELLLL..... ," one of our members said,"Hey, let's kill two birds with one stone!!" In short we decided to put something cute on the back that would sell at the upcoming Nov. 1992 TAMPA HAMFEST..
Someone else said they had just seen some cute jokes posted to HUMOR on packet and they would go home and see if they were still there.

ALAS, they were gone, all he could remember was that the best ones started with "YOU KNOW YOU'RE A HAM WHEN..." He kinda remembered how one or two of them went but that was all so we had to make up the rest.

We came up with about 22 rough ideas for punchlines but decided to select the best and funniest ones to put on the shirts.

It took several votes and a lot of political maneuvering, but we finally boiled it down to 12.

In short, we printed the shirts and got a spot at the hamfest.
There was a lot of enthusiasm about them but we still didn't sell enough to make a profit. Many folks wanted to look, but not as many wanted to buy them. We sold the rest to our members to break even. We were still very pleased... we got some exposure and the club members got some really COOL shirts for very little cost.

I kinda wondered how long it would take until we saw some guy selling the same thing in a ham mag. or at another hamfest...
I never thought we would see it first on the internet..

I only hope that some of you get to see something you create get this much attention. We are very happy!!!

Just to set the record straight... here is the original uncut non-P.C.
version...
.....

YOU KNOW YOU'RE A HAM RADIO OPERATOR WHEN....

the only time you get up at 6:00 am is for a hamfest.

you know you can run all your home appliances on your personal back-up power.

you have breakfast with a guy in England every morning.

your A.R.E.S/R.A.C.E.S. bags are always packed.

the cute girl with the KISS t-shirt asks you what bands you like and you
answer "2 and 20 meters."

you live in a "shack."

a clerk asks you to spell your name, and you do so phonetically.

in a conversation you wait for a courtesy tone before speaking.

you hear a scraping sound when going through a McDonald's drive-thru.

a band opening is more important than a grand opening.

sightseeing is looking at rooftops for antennas.

(we got in lots of trouble for the next one....)

you forget the Y.L., but remember the H.T.

.....

spelling and grammar errors included (as in the original)
for your enjoyment:)

If you want to use it, go ahead... let us know, if you can, we would love
to hear your comments.

V>Hmmm...that's funny. I listen quite a bit on my general coverage
V>receiver and don't hear much local activity on the ham bands.
V>Occasionally, there's a call or two, but this would be less than 5% of
V>the amount of QSOs that I hear locally on 2-meters. But never mind me...
V>of course you would know more about the makeup of our local amateur
V>population since you "work" hams in Charlotte and I only LIVE here!

So, Drew, please tell me... How do you determine the location of all those guys running CW? Since we all know you're not proficient in that mode, how can you tell who's local and who's not? Yes, I know you passed the 5 WPM test. I'm proud of you. Maybe when you've broken through the 10 WPM plateau you'll realize there are people around you you've been missing. But I guess that's not too likely, given your attitude. In my experience, there's more to communication than merely living nearby. I doubt very much that you've been a ham as many weeks as I have years. I hope that some day you'll have the grace to be embarrassed by your behaviour here on the net. This is in public, after all! More than half of the active hams are active on CW. Of those who bother to attain proficiency, then, I guess the vast majority continue to pursue it. There are forces at work here that you do not understand.

>In the October '95 issue of QST, Hal Ward (W1GE) wrote an article on a
>GPS patch antenna. One of the references he used to design the
>antenna was a book by David Pozar titled "Antenna Design Using
>Personal Computers". Hal also noted that the book was published by
>Artech House in '85 and is out of print.

>It is also out of library. My library did a data search and came up
>empty. Does anybody know either (a) where I can get my hands on a
>copy of this book even if only for a day or (b) another good reference
>text for patch antennas. Neither Jasik nor Hamsher (my two antenna
>bibles) make any reference to a "patch" antenna.

This was an interesting article.

a)This book was in my work library, the last I looked. They sometimes lend
via interlibrary loan, but probably NOT to individuals themselves.
My library is at Lincoln Laboratory, Mass. Institute of Technology.
Your library could conceivably request it from us. Dave Pozar is at Univ. of
Massachusetts at Amherst, so their library would also likely have it. I think
Dave went to Ohio State, I believe, and that library would also likely have
it. Other likely libraries are Syracuse Univ., VPI, Univ. of Houston and
Arizona State? I'm basing these comments on which universities have active
research programs in patch antennas.

b)Another reference would be the IEEE's "Transactions on Antennas and
Propagation." Look in the cumulative indices under Dave Pozar, Keith Carver,
S. Long or P. Katehi. Patch antennas are also known as "microstrip" antennas,
so don't forget to look there.

I will never collect from social security what I put in, never.
But most of the old fart hams are collecting far more than they put in,
taking directly from those that EARNED it.
If social security money were actually invested the old fart hams would
live like kings and the young would not suffer.

I'm afraid I have to agree with Burt on this one. I resent the hell out of the fact that an ever-increasing percentage of my hard-earned paycheck is being thrown away on Social Security benefits (WELFARE, in other words) for senior citizens. What's even worse is that the politicians continue to insult my intelligence by assuming that I'm stupid enough to believe their claims that the system is solvent and "will be there for you when you retire."

Small radios may be wonderful in theory, but they're a pain to program all the features when you need to. The tiny, non-human sized rubber (or worse, plastic) buttons necessitate a pencil for the task.

That's one of the things I like about my Icom 2GAT. It's 'human-sized', 7 watt output, rugged as all get out and not going to get lost in my pocket. My only complaint on the radio is the keypad is useless; -all- you can do is dial phones on an autopatch. No punching in freqs, dialing up memories, etc. That's doen by rocker switches on top, a poor way of doing business. So, if you don't use autopatches much or at all, get the IC-2GA. (T=the useless keypad)

I agree with both of you on that. However, stretching that to "kill
all the old hams", or any other statement about old hams, while
ignoring the vastly larger numbers of old non-hams, isn't just a far
stretch, it's downright idiotic.

5661. Using a bug

Newsgroup: rec.radio.amateur.misc
Date: 1995-09-30 00:00:00 UTC
From: ys@isr.harvard.edu
Message-ID: <44je78$61f@decaxp.harvard.edu>
Source record: 237655

I recently started to use an old Vibroplex bug, and found it a lot of fun. I have a few questions, and if experienced bug users can help me out, I will be very grateful:

(1) Dit Contact Adjustment:

I have adjusted my bug according to the instructions of L. Peter Carron's "Morse Code: The Essential Language", pp. 5-10 to 5-13. The bug works OK, but I would like to make the distance between the contact points for dits much narrower. This is because I have been using Bencher's iambic paddle, and set the distance between the contact points fairly small.

Is there any way I can do this for my bug so that I just have to push the lever much less?

(2) Speed Range:

What is the speed range for a bug for ordinary ham operators? I know that I can not send much slower than 20 WPM without additional weights. I can currently send around 25 WPM, and I am wondering if it is possible for me to go above 30 WPM with some practice.

(3) Where to buy one:

I am currently using an old Vibroplex bug that belongs to my radio club. I would like to buy one for myself if my interest lasts. To the best of my knowledge, Vibroplex is the only company I know of which still produces a bug. Are there any other companies? Also, if I want to buy a used bug, is there any place other than ham fests and flea markets?

Thank you very much!

moritz@ipers1.e-technik.uni-stuttgart.de wrote:
: >Many HT's can be modified to transmit beyond their "normal" range. However
: >modifiying amateur equipment to do this is generally illegal.

: Geoff,

: Seems you have not understood the basic concept of amateur radio.
: Amateur radio is by definition experimental, with the effect that
: you are entitled to built and operate transmitting equipement.

: (In some countries having built a TRX is a requirement)

In Canada you must have the advanced qualification before you can build/
operate home brew transmitters (without the advanced qualification you
can build/operate everything EXCEPT home brew transmitters). That aside,
the resposibility as to where you transmit is in the hands of the amateur
in question...

: As a result, the transmitting range of amateur radios is not
: subject to regulations (In fact *all* commercial HF TRX are capable
: of out of band transmissions)

Yes, the rules over which bands are available to amateurs has changed
over the decades, and what is/is not legal today may be very different a
decade from now.

: The point is that responsibility not to actually transmit out
: of band rests totally with the licensee.

True.

I was using other tapes and computer programs to learn the code..with mediocre results. I was stuck at 8-9 words per minute...so out of desperation, I decided to call Jerry Wheeler, and the conversation I had with him convinced me to try Code Quick. Three weeks later I passed the 20 word per minute exam, got my advanced ticket, and one month after that got my extra ticket! I cannot recommend Code Quick enough!

It might seem a little wierd when you try it out, but I think that if it can help me get the results I got, the program can help ANYONE!

Try it out....he does offer a money back guarantee!

Does anyone know where I can get a DX and contest reflector program?
Please e-mail me with any information.
Thanks
Bruce(smsnj@waterw.com)

Right. Unlike Burt, I don't want to "kill all the old hams"
I'm just tired of paying my $$ for their Social Security.

Don't tell me, let me guess...

First, they chastised you for being a CB'er.

Then, they told you that you'll never be a "real ham" until you learn
Morse code.

Sad, isn't it?

Sorry you didn't have a good experience at your first ham meeting.
Of course, if a newcomer enters a group with a condescending attitude
("All of these people are NERDS!"), it doesn't really make for a
good chance for friendship.

Some are us *are* somewhat nerdy, and I include myself... perhaps
especially myself. I'm a engineer who got started in ham radio at
13 and computers at 16 (in 1971 yet). I maybe be THE prototypical
nerd. A lot of hams and engineers (and others) don't have the
greatest social or interpersonal skills. But most of these people
are nice people nonetheless. It just takes a while to get to know them.

So, yes, there are a lot of nice people to talk with on two meters.
Sure, there are some jerks, but that is true in any group of people.
But if you'll try to get to know some of the people, you find most of
them.

Try another club. Find out if there are ham radio classes in the
area. People that teach ham classes are, by definition, interested
in help newcomers, and they're the best people to know at first.

Don't give up on ham radio just because of one bad experience at
a club meeting.

(By the way, a convention in computer e-mail is not to use
ALL CAPS. It makes the message a little hard to read and all caps
is considered SHOUTING.)

Hi Drew, I'm going to borrow an argument from the pro-code-
testing folk. All my life, I was forced to pay my $$ for
"their" Social Security to the tune of six digits. Now it's my
turn to collect. If I had to do it, then you should also. :-)

Sadly, most drivers are the same way. You're right, it's easy to
get erroneous readings on traffic radar; it is a stationary antenna,
no scope type radar, whereas air traffic radar has rotating antennas
with scopes at the other end. All the cops see is a readout.
Doesn't say what caused that readout. The car's heater fan can
affect the reading, the engine fan can, trees, lightning... there
are a host of errors that traffic radar is susceptible to. Check
out http://www.cnmw.com (Cincinnati MIcrowave, detector makers) for
a description of radar's errors.

I am on a quest to find ham related clipart in any format I can.
I have been surfing around the net looking for "stuff" to use on
QSL cards such as antennas,rigs,satellites,tnc's ect. and so far have come
up pretty dry. Is there any place to find this stuff?
Freeware,shareware or even (Heaven forbid) commersial payware.
Thanks
Walt N3JPR

>Michael Falk- N9YKZ

Ah Michael, being such a young man, you have much to learn about human dynamics and motivations (as well as how to win friends and influence people). Allow me to start you down the right road.

Some people on this newsgroup have insisted that CW is a "mode" and not a technology, so I'll borrow their categorization, even if I don't completely agree with it. If CW is a mode, something long-since pre-empted as a communications technology but something that hams do by choice because they want to, then ultimately using it is a matter of personal taste. One of the most futile things you can attempt to do is try to impose your tastes on other people and assume that everyone thinks as you do and what is a valid and interesting experience for you must be instantly applicable to everyone else without question. Even worse, deriding others who don't share your tastes as lazy or stupid is a good way to get yourself tuned out, if not attacked.

As an example, something that might appear to be technology, but has nontrivial elements of personal taste involved, is Gnu Emacs. I'm using it right now to type this reply. It's a truly wonderful piece of software. It's not only an editor, it has interfaces to other computer applications such as FTP, compilers, debuggers, file version control, mail, news, and a pretty good calendar/diary through its extension

language. It's an open, freely-licensed technology that has been ported to just about every conceivable Unix-based system, and even a few non-Unix ones such as DOS and VMS. I consider it an indispensable productivity tool for myself and I recommend it to others.

However, there's several down sides to using it. It has a vicious learning curve. The extension language is a dialect of Lisp (reflecting Emacs' AI roots). It can be a resource hog on smaller systems. It might be overkill for someone wanting to just type a few paragraphs in a mail or news message. Even in the Unix programming world, others may have gotten so conditioned to using VI that to relearn an editor is difficult and might not be a productive use of their time.

I could just as easily rant and rave about how everyone should use Gnu Emacs. I learned it, so can anyone else. If you object to learning it, you must be lazy or stupid. If I even attempted to pull something like that above at school or work, I would immediately lose all respect from my peers (I might even get fired).

Just so you don't call me to task for the one flaw in my argument, I'll acknowledge Gnu Emacs isn't currently required by International Treaty, but that wasn't the main argument you made. You argued that everyone should learn CW because its easy and enjoyable according to your subjective judgement based on your personal experiences. It would also be useful to point out international treaty were to change such that Morse Code were no longer required by HF, then you are only left with the arguments that some sort of "protectionism" is needed for the CW mode, or that your tastes should be shared by everyone. Neither argument is terribly convincing.

Hmmm...I don't know how far that will get, though.

FWIW, I saw an editorial a few months ago in Information Week that speculated that the real reason for the encryption restrictions was to avoid angering France. That country has extremely tight restrictions on the *use* of encryption -- so tight that MS-DOS 6 had to be modified to meet them -- and the speculation was that, since any shareware on the net (or on BBSes) can be downloaded into France, dropping the export ban would anger that government and possibly cause France to pull out of NATO, start buying oil from Iraq or do other things that our government would not want to see happen.

>email address. Thanks, Steve WO9L sdolmft@interaccess.com

The PTT connection is not needed at all. It is there in case you want to bypass the filter during transmit operation. For instance, if you use the MONITOR function to listen to yourself, or if you use the sidetone on CW, it is quite confusing listening to the slightly delayed signal that comes out of the DSP box. Hooking the PTT up will allow non-delayed audio to come out of the speaker/phones while transmitting and switch back to the filtered audio on receive.
